12 October 2026

Phase 4 Soil Sampling Completed at Srebrenica North – Phase 2 and 3 Assays Pending

Highlights

- **Phase 4 soil sampling completed at Srebrenica North, with 593 samples (including 30 QAQC samples) collected across the wider Vagan tenement**
- **Phase 2 and 3 samples submitted to ALS laboratory for analysis, with results expected in the comings months; additional Phase 2 soil sampling planned for this month**
- **Follows Phase 1 results, which defined three coherent silver-zinc-lead-antimony soil anomalies at Chaush, Zanik South and Zanik North**
- **Ground magnetic survey completed over the Zanik and Gradina areas; the combined soil and magnetic datasets will be used to rank targets for follow-up work and first-pass drill testing**

Managing Director commentary

Dave Malesic · Managing Director & CEO

"Completing Phase 4 is another important step at Srebrenica North, taking our soil sampling to more than 1,000 samples across the Dolovi and Vagan licences, collected using consistent procedures and quality control throughout.

Phase 1 defined three coherent silver-zinc-lead-antimony anomalies at Dolovi, two of which remain open. Phase 2 tested the extent of those anomalies, and additional Phase 2 samples are being collected this month. Phases 3 and 4 provide the Company's first systematic soil coverage of the Vagan licence. Together with the ground magnetic data, these results will allow us to prioritise targets for mapping, rock chip sampling and trenching, ahead of first-pass drill testing."

Announcement details

Regener8 Resources NL (ASX:**R8R**) ("**Regener8**" or "**the Company**") is pleased to advise that fieldwork for Phase 4 soil sampling has been completed at its 100% owned Srebrenica North Project (**Project**) in Republika Srpska, Bosnia and Herzegovina. The Project is held through the Company's wholly owned Bosnian subsidiary, Orichalcum d.o.o.

Phase 4 soil sampling

Phase 4 comprised 563 soil samples, plus 30 QAQC samples, collected at approximately 200m spacing along ridgelines and spurs across the wider Vagan tenement. The program followed the same sampling and quality control procedures used in Phases 1 to 3. Samples are being prepared for dispatch to the ALS laboratory in Bor, Serbia, for analysis.

Figure 1: *Phase 4 soil sampling at Srebrenica North, Vagan tenement*

Phase 2 and 3 soil sampling

Phases 2 and 3 extended soil coverage across the wider Dolovi tenement and into the Gradina area of the Vagan tenement[1]. Phase 2 tested the open extensions of the Chaush and Zanik South anomalies, with 127 soil samples (plus 6 QAQC samples) collected and submitted to ALS for analysis. The Company is taking additional Phase 2 samples during October 2026, estimating approximately 300 soil samples (plus additional QAQC samples). Phase 3 sampling is complete, with 166 soil samples (plus 8 QAQC samples) also submitted for analysis. Results for the Phase 2 and 3 samples submitted to date are expected during October 2026 and will be reported once received, validated and reviewed by the Competent Person.

Phase 1 results

Phase 1 sampling targeted the Zanik and Chaush prospects on the Dolovi tenement and defined three coherent Ag-Zn-Pb-Sb soil anomalies[2]: Chaush (1,050m x 350m, open to the north-west), Zanik South (700m x 450m, open to the south and coincident with historical workings) and Zanik North (700m x 200m, a newly defined target). Soil anomalies are surface geochemical targets; their dimensions are not indicative of the size, continuity or grade of any underlying mineralisation.

Srebrenica North Project

The Project comprises two exploration licences, Vagan (49.25km^2) and Dolovi (25.00km^2), within the Srebrenica Volcanic Complex, part of the Tethyan Metallogenic Belt in eastern Bosnia and Herzegovina. The licences sit in a district that hosts operating base and precious metal mines, including the Sase mine approximately 1km south-east of the Chaush anomaly. Proximity to operating mines is not an indication that economic mineralisation exists at the Project. The Project has not been drilled by the Company and no Mineral Resource or Ore Reserve has been estimated.

Exploration program status

Program	Tenement / area	Samples	Fieldwork	Results
Phase 1 soils	Dolovi – Chaush and Zanik	198 + 10 QAQC	Complete	Reported 7 Sep 2026
Phase 2 soils	Dolovi – wider tenement area	127 + 6 QAQC	Complete; additional samples Oct 2026	Pending – at laboratory
Phase 3 soils	Vagan – Gradina	166 + 8 QAQC	Complete	Pending – at laboratory
Phase 4 soils	Vagan – wider tenement area	563 + 30 QAQC	Complete	In preparation for dispatch
Ground magnetics	Zanik and Gradina	–	Complete	Interpretation in progress

Near-term outlook

→ **Planned Next Steps**

- Receipt, QAQC review and reporting of Phase 2 and 3 assay results
- Collection of the additional Phase 2 samples, and laboratory analysis of these and the Phase 4 samples
- Interpretation of ground magnetic data[3] and integration with the soil geochemistry
- Follow-up geological mapping, rock chip sampling and trenching over priority anomalies
- Ranking of targets for first-pass drill testing, subject to results and the required approvals

This announcement has been authorised for release by the Board of Regener8 Resources NL.

About Regener8 Resources NL

Regener8 Resources NL (ASX:R8R) is a mineral exploration company focused on the Srebrenica North silver-zinc-lead-antimony project in Republika Srpska, Bosnia and Herzegovina, held through its wholly owned subsidiary Orichalcum d.o.o. The Company also holds the North Achilles Project in the southern Cobar Basin, New South Wales, which is prospective for gold, silver and copper.

Competent persons statement

The information in this announcement that relates to exploration activities and exploration results at the Srebrenica North Project is based on, and fairly represents, information compiled by Mr Mladen Stevanovic, a Fellow of the Australasian Institute of Mining and Metallurgy (FAusIMM (CP) – 333579). Mr Stevanovic is engaged as Regional Exploration Manager of the Company. Mr Stevanovic has sufficient experience relevant to the style of mineralisation and type of deposit under consideration, and to the activity being undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Stevanovic consents to the inclusion in this announcement of the matters based on his information in the form and context in which it appears.

Previously reported information

The information in this announcement that references previously reported exploration results is extracted from the Company's ASX market announcements referred to in the footnotes. These announcements are available on the Company's website and the ASX website (www.asx.com.au). The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements, and that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

Forward looking statements

This announcement contains forward-looking statements, including statements about planned exploration activities, the expected timing of assay results and future drilling. These statements are based on the Company's current expectations and are subject to risks and uncertainties, many of which are outside the Company's control, including laboratory turnaround times, exploration results, weather, regulatory approvals and funding. Actual outcomes may differ materially. The Company does not undertake to update forward-looking statements except as required by law or the ASX Listing Rules.
