ASX ANNOUNCEMENT
By e-lodgement

28th October 2020

SEPTEMBER QUARTERLY ACTIVITIES REPORT

Apollo Consolidated Limited (ASX: AOP, **Apollo** or **the Company**) is pleased to report operational activities for Q3 2020, highlighted by excellent exploration and infill drilling at the Company's wholly owned **1.03Moz[1] Lake Rebecca Gold** Project. Apollo continued to systematically work through exploration opportunities to further build and refine Mineral Resources via ongoing infill, extensional & exploration Reverse Cycle (RC) and diamond drilling. Strong drilling results were returned in the southern parts of the flagship **Rebecca** deposit and at **Duke**, and exciting high-grade hits were returned from the emerging **Cleo** discovery. Two rigs are currently on site and drilling is expected to continue through the remainder of the year.

HIGHLIGHTS:

- ✓ **Exploration RC drilling confirms Cleo discovery** with hits including **38m @ 2.00g/t Au** (incl. 2m @ 20.4g/t Au) (RCLR0635) and **2m @ 9.39g/t Au** (incl. 1m @ 17.2g/t Au) (RCLR0636)
- ✓ **Infill RC drilling** at the **775,000oz[1] Rebecca deposit** hits **10m @ 5.0g/t Au*** & **7m @ 3.01g/t Au*** (RCLR0677), **25m @ 1.30g/t Au*** & **3m @ 5.30g/t Au** (RCLR0669), **10m @ 1.54g/t Au*** (RCLR0673), **8m @ 1.97g/t Au** (RCLR0671), and **10m @ 1.34g/t Au*** (RCLR0674)
- ✓ **Rebecca intercepts** sit below the base of optimised pit shell that was used to constrain Rebecca Mineral Resource estimate[1] and **are likely to extend the optimised pit** into this area in next engineering studies
- ✓ **Infill and step-out drilling at the 80,000oz[1] Duke deposit further defines significant widths of gold mineralisation including 36m @ 1.89/t Au** (RCLR0658**), 41m @ 1.16g/t Au** (RCLR0655), **21m @ 1.36g/t Au** (RCLR0659), **17m @ 1.34g/t Au** (RCLR0656), **17m @ 1.30g/t Au** (RCLR0657), and **15m @ 1.64g/t Au** (RCLR0662)
- ✓ **Infill and exploration drilling** at the **180,000oz[1] Duchess deposit confirms wide zones of gold** including **5m @ 6.98g/t Au** (incl. 1m @ 31.48g/t Au) (RCLR0606), **7m @ 3.90g/t Au**

(RCLR0621), **9m @ 3.15g/t Au** (incl. 1m @ 16.51g/t Au) (RCLR0611), **12m @ 2.44g/t Au** & **7m @ 2.01g/t Au** (RCLR0603), **35m @ 0.90g/t Au** (RCLR0649), **10m @ 1.46g/t Au** & **18m @ 0.74g/t Au** (RCLR0651), **10m @ 1.83g/t Au** (RCLR0652), and **9m @ 1.82g/t Au** & **24m @ 0.87g/t Au** (RCLR0631)

- ✓ Significant addition to the **Yindi** project landholding with an additional 204km^2 secured under a new exploration licence application

- ✓ The Company remains in a **strong financial position**, with **$19.8M** in consolidated cash as of 30th September 2020

[1] Refer to ASX: AOP 10th Feb 2020 "+1.0 Million Ounce Maiden Gold Mineral Resources Lake Rebecca".

***** Reported intercepts contain one or more composite samples that will now be resampled at 1m intervals.*

1.1 Lake Rebecca Gold Project (Apollo 100%)

Q3 2020 RC and Diamond Drilling

Exploration and step-out drilling continued at Lake Rebecca as part of Apollo's fully funded RC and diamond drilling activities at the Project. Progress updates and results from 83 RC holes and three diamond holes (total 14,158m) drilled this Quarter were released in:

ASX: AOP 4th August 2020 'Duchess drilling points to upgrade potential'

ASX: AOP 31st August 2020 'Strong Gold Intercepts at Cleo and Duchess'

ASX: AOP 24th September 2020 'Duke delivers additional wide zones of gold mineralisation'

ASX: AOP 12th October 2020 'Infill Drilling Points to More Gold at Rebecca Deposit'

Drilling details for all holes reported during the Quarter are shown in Table 3.

CLEO DISCOVERY

Five exploration RC holes at **Cleo** delivered **high-grade intercepts**, including the best to date at this area, confirming a new discovery.

'Scissor' drill hole RCLR0635 returned a standout fresh-rock intercept of **38m @ 2.00g/t Au** incl. **2m @ 20.4g/t Au**, as well as an oxide intercept of **5m @ 2.75g/t Au** (Figure 1). These intercepts sit in widespread gold anomalism totalling ***113m @ 0.46g/t Au EOH*** (calculated at >0.20g/t Au and a 1g/t top-cut).

Drill hole RCLR0636 located 100m to the north (Figure 2) also intersected widespread anomalism (*70m @ 0.34g/t Au*) and fresh rock results to **2m @ 9.39g/t Au** incl. **1m @ 17.2g/t Au**.

Drilling to date has identified a **substantial mineralised zone** at Cleo, particularly on drill section 6641820N where the anomalous zone is **at least 150m wide** (Figure 1). Mineralisation is hosted by fine grained disseminated sulphides in micro-diorite to amphibolite, as compared to granodiorite

gneiss at the Rebecca, Duchess and Duke deposits, and this potentially opens new exploration fronts to the south (Figure 2) and in under-explored parts of the Project.

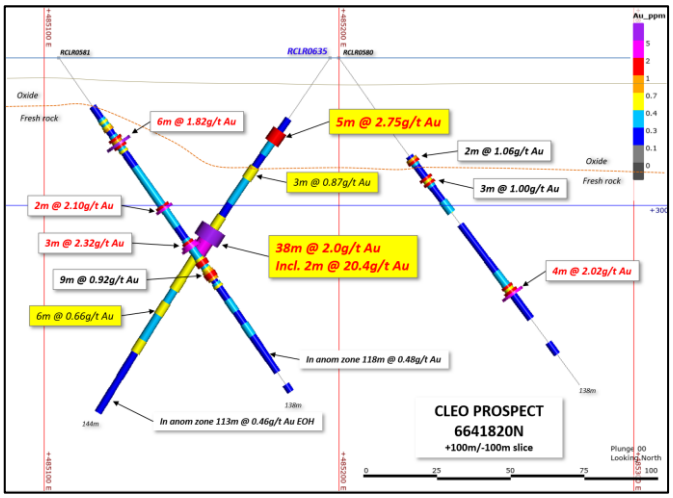

Figure 1. Cross-section view 6641820N Cleo Prospect (looking north) showing intercepts in this release in yellow and the distribution of gold mineralisation in Apollo's earlier drilling.

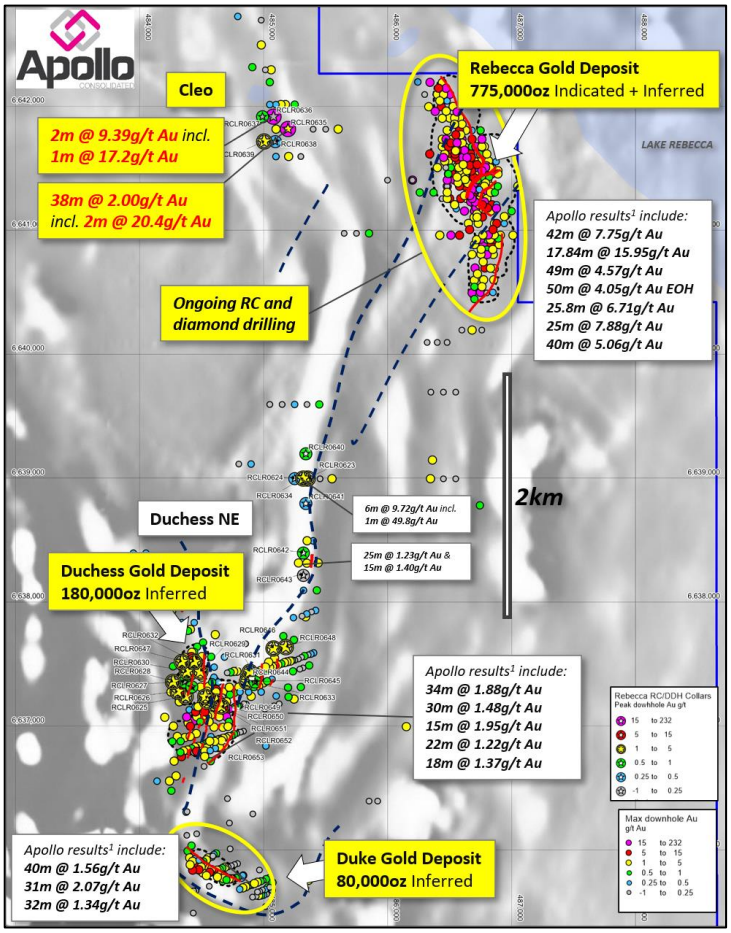

*Figure 2. **Lake Rebecca Gold Project** (LHS) and location of **Rebecca**, **Duchess** and **Duke** Mineral Resources[1] on aeromagnetic imagery (RHS), **activity during the Quarter in yellow text boxes**. Image also has all RC and/or diamond drill collars[2], colour-coded for peak downhole gold values. Refer to Notes 1-3 for details of Mineral Resource reporting and previous RC and diamond drilling activities.*

Whilst additional drilling is required to determine the orientation of mineralisation at Cleo, the **identification of high-grade mineralisation is a significant step forward** and will drive additional exploration drilling. A further 12 RC holes have been drilled here since the end of the Quarter, with samples now at the analytical lab.

REBECCA DEPOSIT

'Saddle' area south of Jennifer

Additional RC exploration drilling was carried out on three infill sections in a lightly drilled 'saddle' area in the optimised pit shell that constrains **the 775,000-ounce Rebecca Mineral Resource**[1]. This area sits just to the south of the high-grade **Jennifer** structure. This area was identified as a priority target for additional drilling following the optimisation completed earlier this year.

A series of solid intercepts were returned, **most of which lie outside the resource model, below the pit design** (Figure 2) **and upgraded previously modelled mineralisation in this area**.

Significant intercepts included **10m @ 5.0g/t Au*** and **7m @ 3.01g/t Au*** in RCLR0677, **25m @ 1.30g/t Au*** and **3m @ 5.30g/t Au** in RCLR0669, **10m @ 1.54g/t Au*** in RCLR0673), **8m @ 1.97g/t Au** in RCLR0671, and **10m @ 1.34g/t Au*** in RCLR0674 (Figure 3).

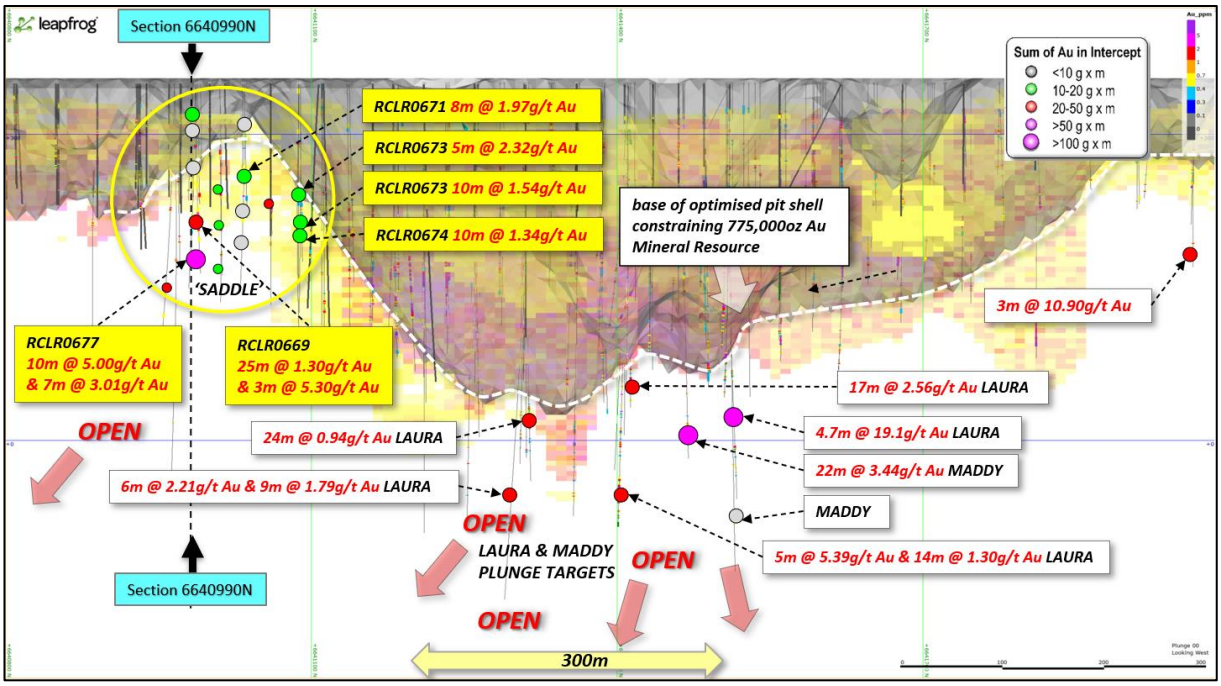

*Figure 3. Long-section view of gold mineralisation at the **Rebecca deposit** (looking west), with **RC drill intercepts this Quarter in yellow** and drill hole pierce points colour coded for sum of contained gold in the drill intercept. Note: The grey shade is the 3D optimised pit shell used to constrain reported Mineral Resources. Mineralisation outside this area is not reported. Note key intercepts received 2019 and reported AFTER the calculation of Mineral Resources are shown in white boxes. Please refer to Notes 1-2 for details of Mineral Resource reporting and previous RC and diamond drilling activities.*

Drilling typically intersected two west dipping sulphidic mineralised structures (Figure 4), upgrading previous drilling and interpretation in the target area. The results may assist in removing or reducing the 'saddle' from the southern part of the Rebecca pit shell and therefore optimise future mine design.

** Reported intercepts contain one or more composite samples that will now be resampled at 1m intervals.*

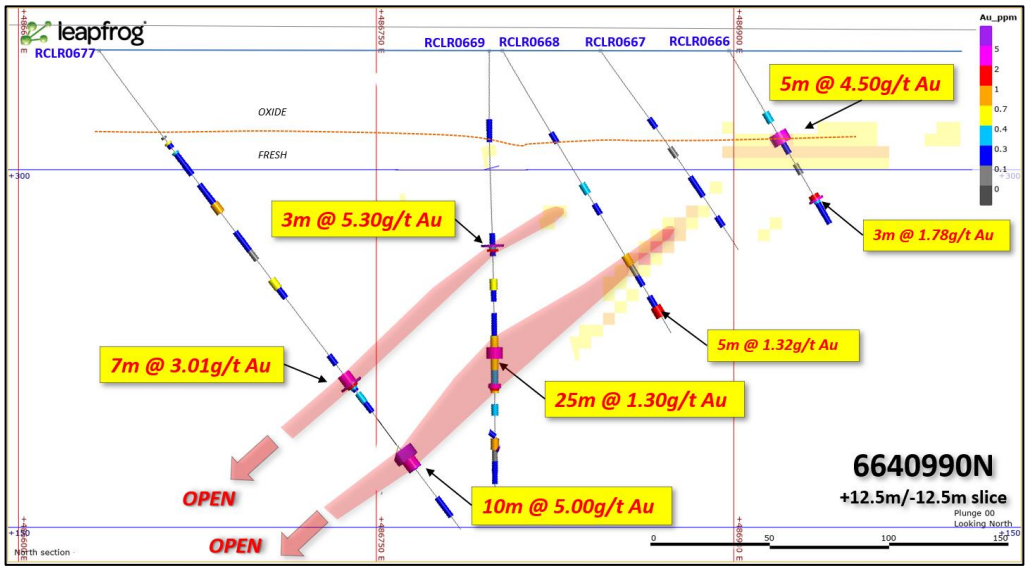

Figure 4. Cross-section view 6640990N (looking north) showing intercepts in this release in yellow overlain on the gold block model generated in February 2020 as part of first Mineral Resources. Note the limited extent of past mineralisation in this area. Refer to Notes 1 and 2 for Mineral Resource reporting and previous RC and diamond drilling activities.

Diamond Drilling Rebecca Deposit

A further three diamond 'tails' were completed at the Rebecca deposit by extending earlier RC pre-collars, for a total 458m NQ core. Drill holes tested step-out and down-plunge exploration targets on the **Laura** and **Maddy** mineralised structures in positions well below the current Mineral Resource[1] at the deposit.

Drillholes RCDLR0567 and RCDLR0574 tested step-out Laura targets on Section 6641310N, with RCDLR0567 intersecting **24m @ 0.94g/t Au** from 342m, corresponding to strong silica and sulphide alteration, and deeper hole RCDLR0574 intersecting **9m @ 1.79g/t Au** from 425m, and **6m @ 2.21g/t Au** from 458m (Figure 5).

The Laura hits are interpreted to be close to true width and have extended mineralisation on this structure over more than 250m down dip and 100m southward. The Laura structure remains open to strike and depth, and Apollo sees excellent potential for exploration and infill drilling to define coherent higher-grade mineralisation.

Apollo will continue to drill exploratory diamond holes below the Rebecca Mineral Resource as pre-collar holes become available, predominantly testing plunge targets for high-grade mineralisation suitable for underground extraction and expects this work to ramp-up into 2021.

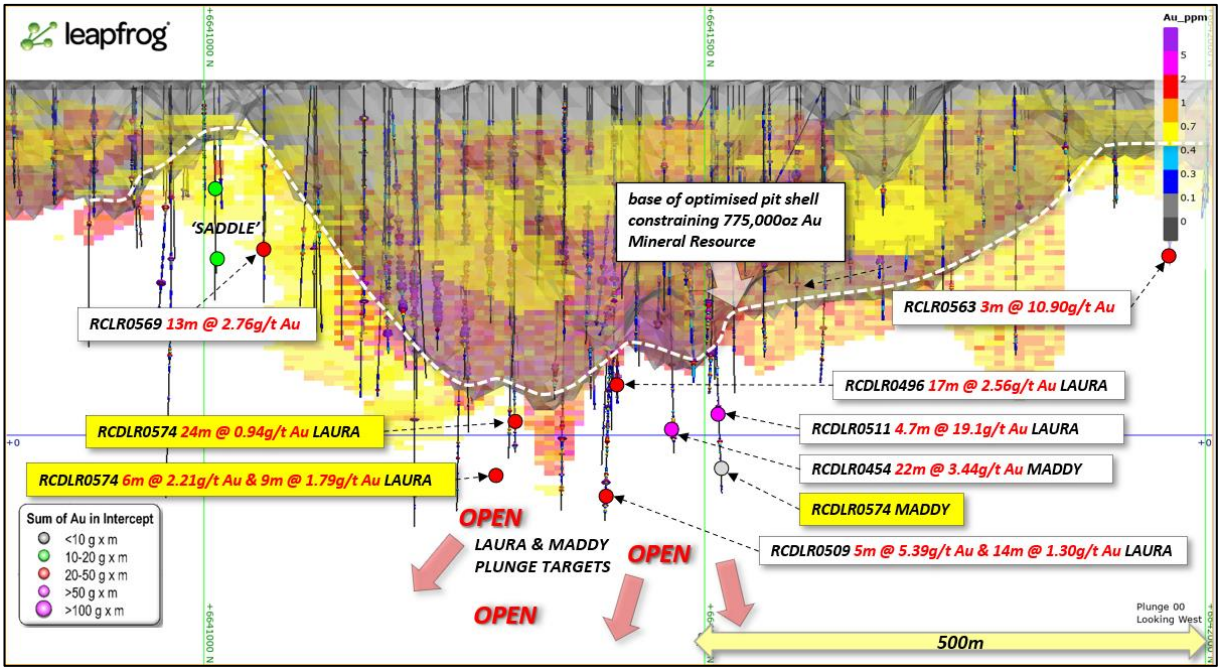

*Figure 5. Long-section view of **Rebecca deposit** (looking west), showing the Rebecca Mineral Resource[1] block model (coloured blocks), the lower boundary of the Mineral Resource (dashed white line), and **diamond drill results this Quarter in yellow**. Drill hole pierce points are colour coded for sum of contained gold in the drill intercept. Refer to Notes 1-2 for details of Mineral Resource reporting and previous RC and diamond drilling activities.*

DUKE DEPOSIT

Duke RC Drilling

Duke is a shallow gold system with Inferred Mineral Resource[1] of **80,000oz** located 5km south of the flagship Rebecca deposit (Figure 2). Infill and step-out drilling was carried out during the Quarter to build geological confidence, completing an approximate 40m x 40m drill density.

Significant gold results included **36m @ 1.89g/t Au** in RCLR0658 and **41m @ 1.16g/t Au** in RCLR0655 (Figures 6 and 7).

These intercepts are supported by **21m @ 1.36g/t** Au in RCLR0659, **17m @ 1.36g/t Au** in RCLR0656, **17m @ 1.30g/t Au** in RCLR0657, and **15m @ 1.64g/t Au** in RCLR0662.

The core of the mineralised structure sits within an anomalous (>0.20g/t) Au gold envelope, with combined mineralisation (grade zones + anomalous envelope) amounting to hits such as 78m @ 0.55g/t Au in RCLR0658, 45m @ 0.88g/t Au in RCLR0662, and 47m @ 0.66g/t Au in RCLR0663.

The completed drill pattern has confirmed a steeply dipping zone of robust disseminated sulphide-hosted gold mineralisation that remains open at depth and to the east (Figures 8 & 9).

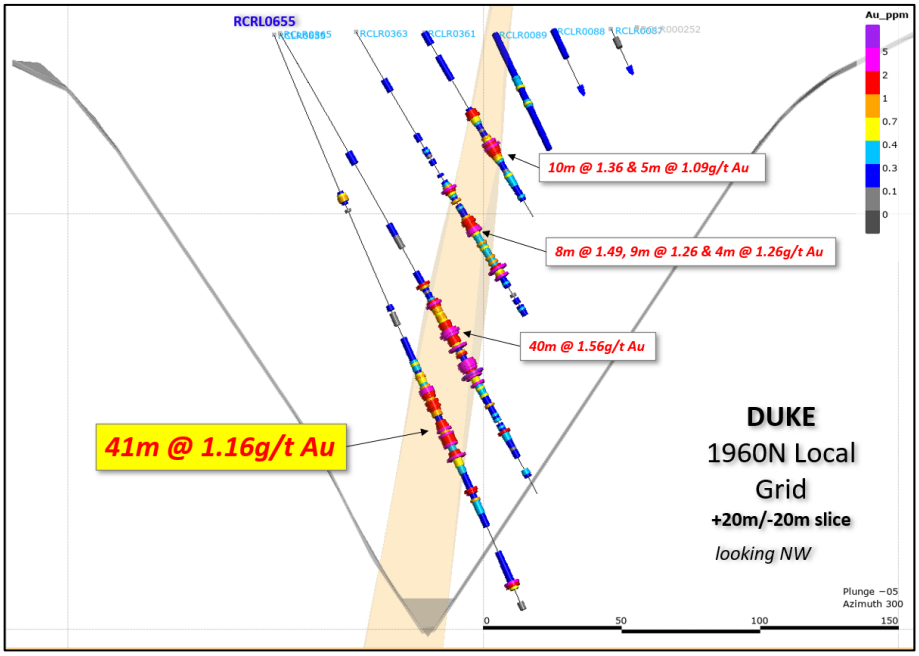

Figure 6. Cross-section view Duke Prospect 1960N (local grid 035 degree looking northwest) showing intercepts in this release in yellow and the distribution of gold mineralisation in Apollo's earlier drilling. Grey outline is the 3D optimised pit shell used to constrain reported Mineral Resources.

Apollo sees potential for gold mineralisation to extend upward well into the overlying oxide profile (an under-tested zone that will see continued shallow drilling), as well as potential for higher grade material in plunge extensions of the system.

All intercept locations and significant results are shown in Figure 6.

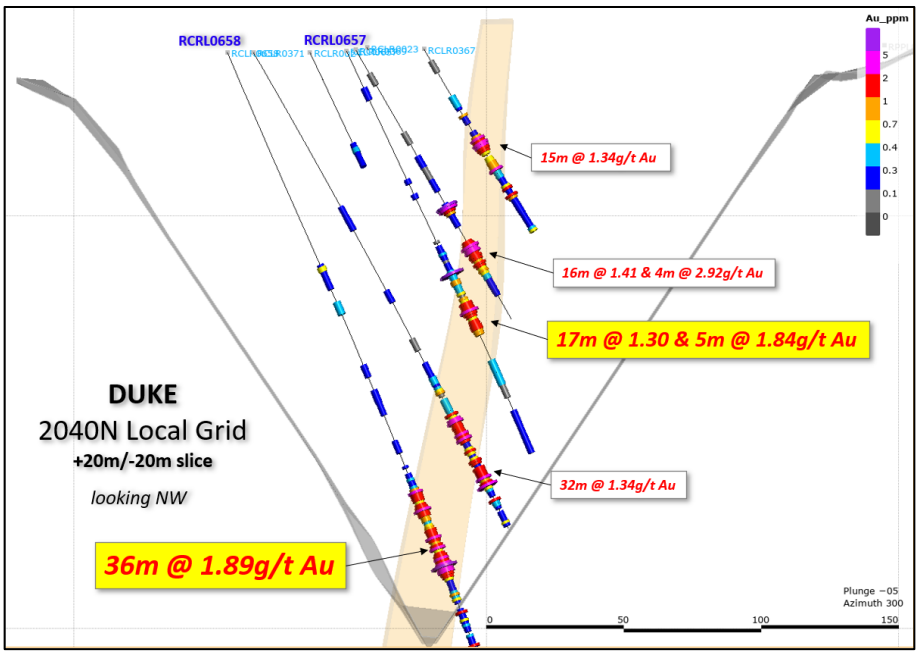

Figure 7. Cross-section view Duke Prospect 2040N (local grid 035 degree looking northwest) showing intercepts in this release in yellow and the distribution of gold mineralisation in Apollo's earlier drilling. Grey outline is the 3D optimised pit shell used to constrain reported Mineral Resources.

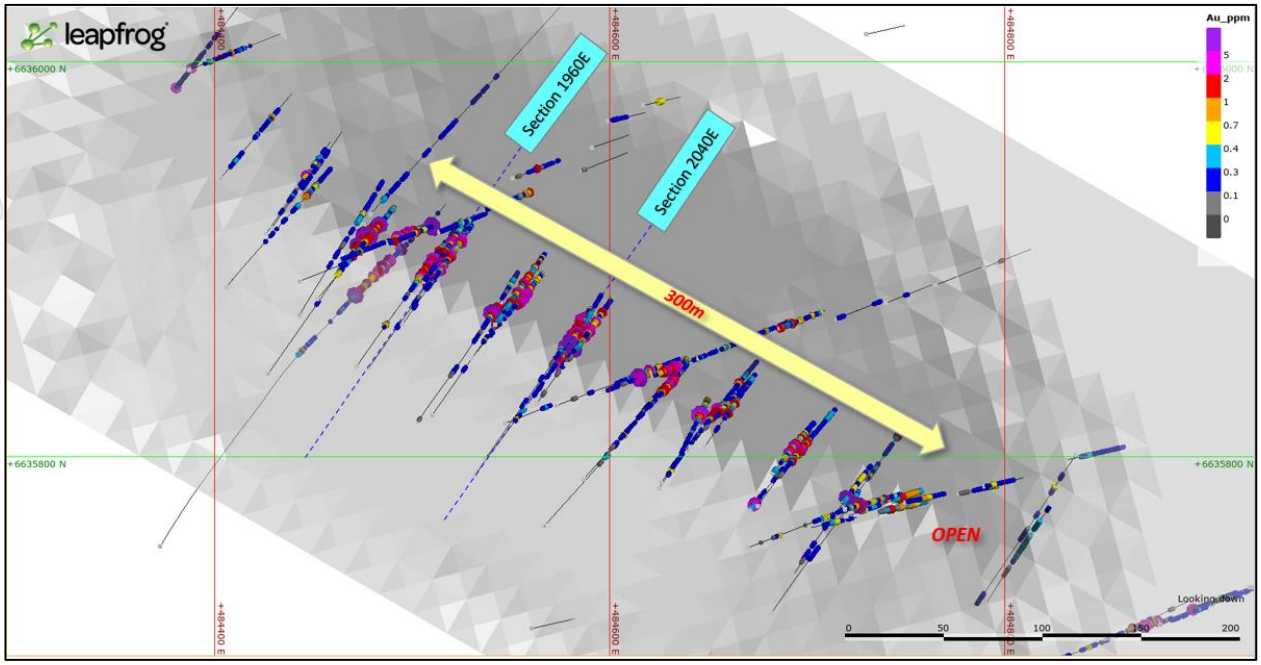

Figure 8. Duke plan view showing all RC and diamond drill holes and downhole gold grades. The grey shaded area is the optimised pit shell used to constrain reported Mineral Resources. Mineralisation outside this area is not reported.

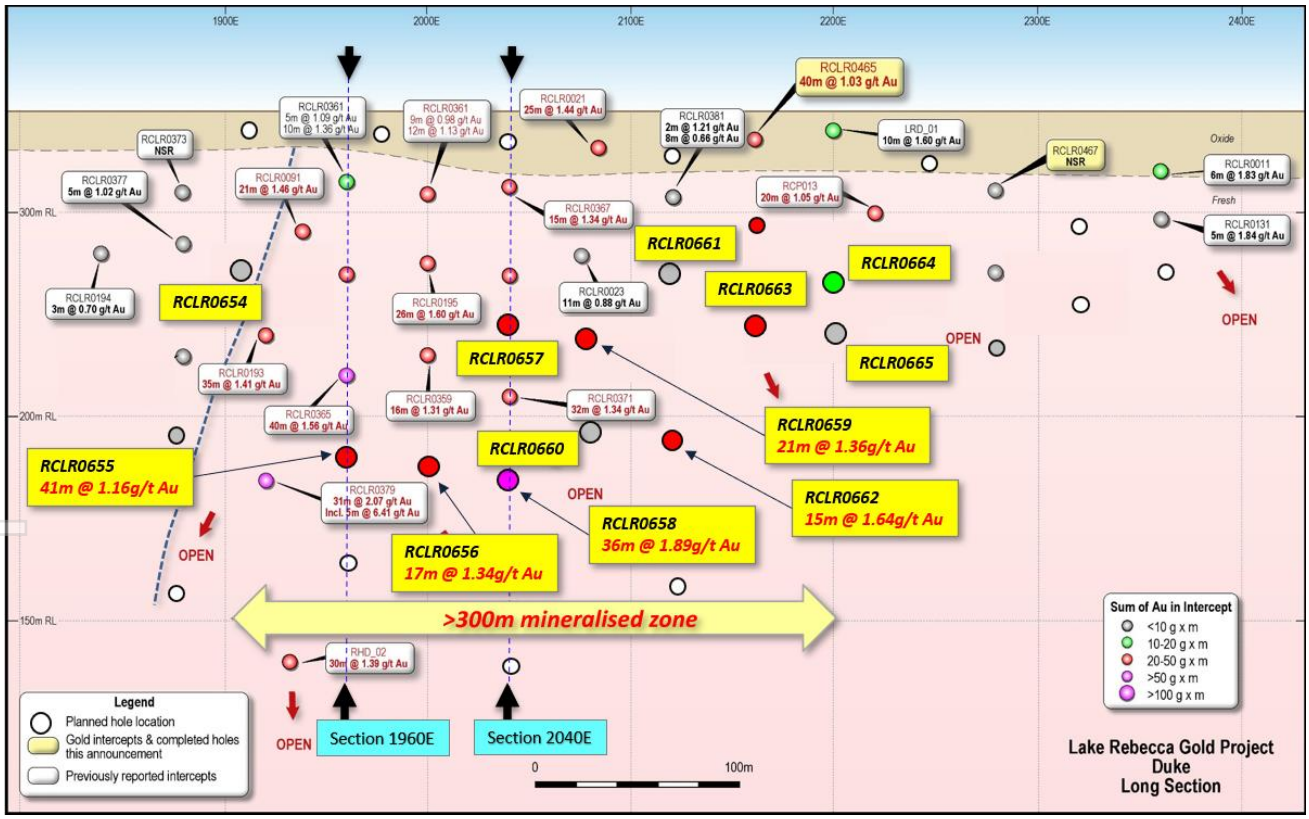

Figure 9. Duke long section (local grid looking NE) showing intercept points of new drill holes coloured for sum of gold in intercept (gramme x metres) & selected assay results in yellow text boxes. Selected previous[2,3] drill results in white text boxes.

DUCHESS DEPOSIT

Duchess is located 4km south of Cleo and the Rebecca deposit (Figure 2) and encompasses several moderately west-dipping structures marked by widespread disseminated sulphide, shearing and alteration. The deposit received extensive infill and step-out drilling during the Quarter to build geological confidence and complete an approximate 40m x 40m drilling pattern on each structure.

Drilling progressed as expected with further significant intercepts received (Figure 10), most of which are interpreted to be close to true width. Hits included **12m @ 2.44g/t Au** & **7m @ 2.01g/t Au** in RCLR0603 (Figure 11), **7m @ 2.10g/t Au** in RCLR0605, **5m @ 6.98g/t Au** incl. 1m @ 31.48g/t Au outside the Mineral Resource model in RCLR0606, **9m @ 3.15g/t Au** incl. 1m @ 16.51g/t Au outside the Mineral Resource model in RCLR0611, **11m @ 1.23g/t Au** outside the Mineral Resource model in step-out hole RCLR0617, and **7m @ 3.90g/t Au** outside the Mineral Resource model in step-down hole RCLR0621.

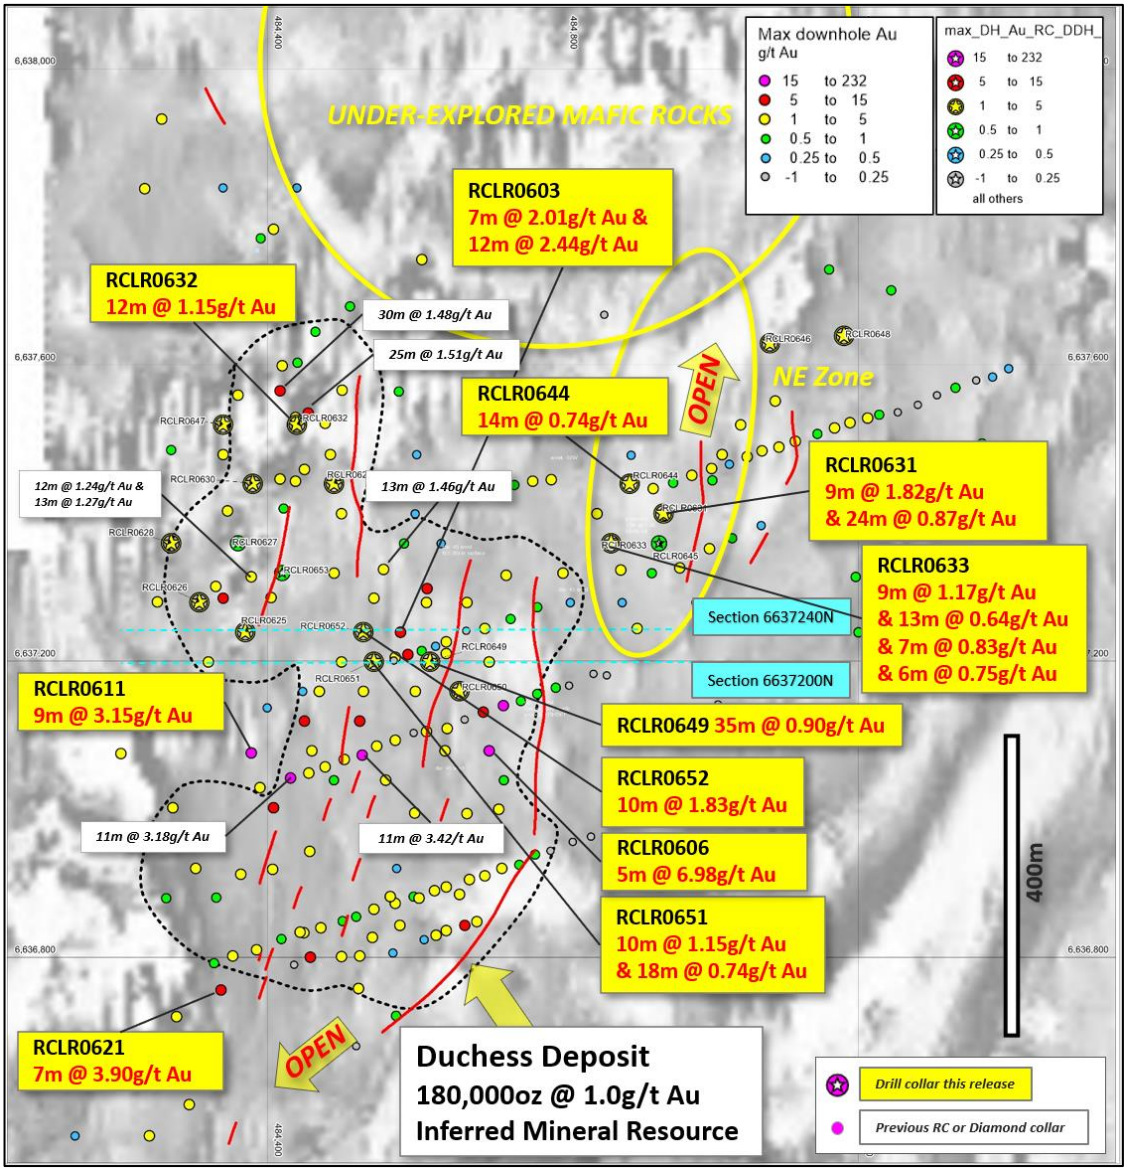

*Figure 10. Plan view of **Duchess** gold deposit on ground magnetic imagery, showing outline of optimised pit shell[1] as dashed linework, mineralised structures (red) projected to surface, and all RC and/or diamond drill collars[2] colour-coded for peak downhole gold values. **Selected drill intercepts this Quarter labelled in yellow**. Refer to Notes 1,2 & 3 for details of Mineral Resource reporting and previous RC and diamond drilling activities.*

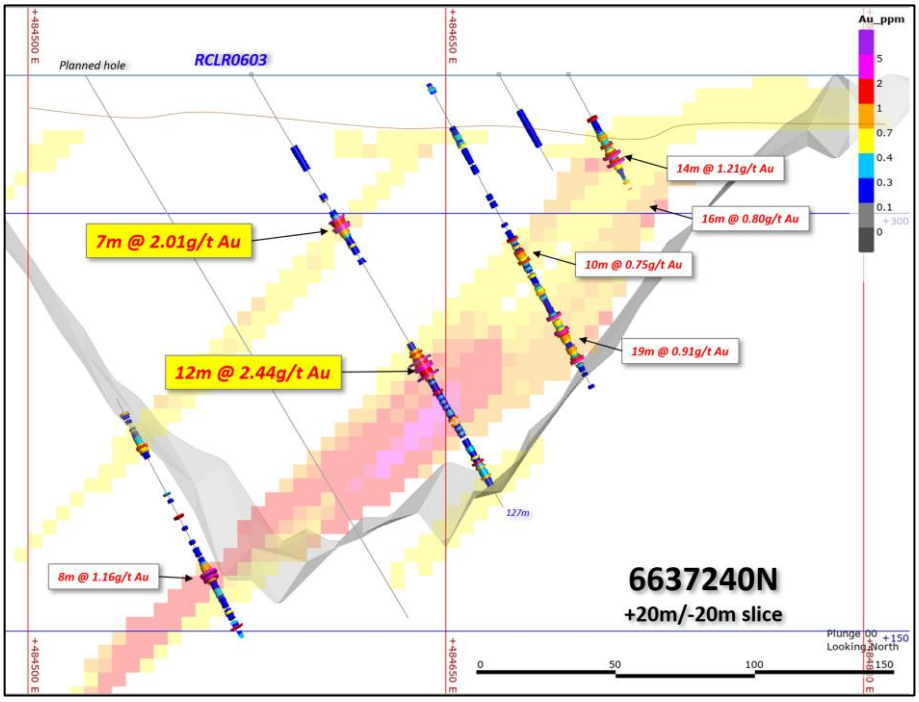

Figure 11. Cross-section view 6637240N (looking north) showing intercepts in this release in yellow and outline of current Duchess Mineral Resource boundary (grey) and the distribution of previous mineralised blocks. Refer to Notes 1,2 & 3 for Mineral Resource reporting and previous RC and diamond drilling activities.

A new zone of mineralisation to the NE of the deposit returned hits including **9m @ 1.82g/t Au** and **24m @ 0.87g/t Au** in RCLR0631, **12m @ 1.15g/t Au** in RCLR0632, **35m @ 0.90g/t Au** in RCLR0649 (Figure 12), **10m @ 1.46g/t Au** & **18m @ 0.74g/t Au** in RCLR0651, and **10m @ 1.83g/t Au** from 94m in RCLR0652.

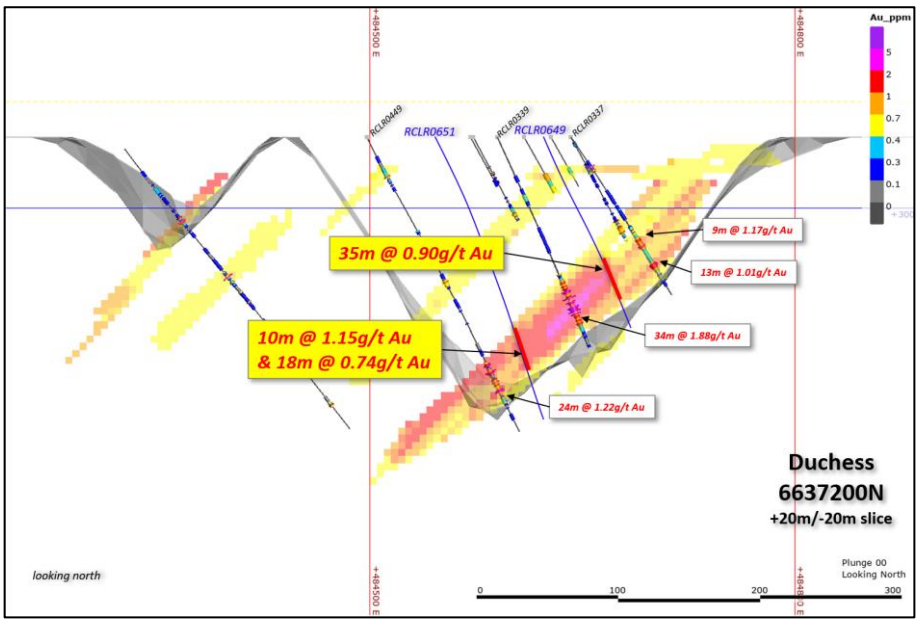

Figure 12. Cross-section view 6637200N (looking north) showing intercepts in this release in yellow and outline of current Duchess Mineral Resource boundary (grey) and the distribution of previous mineralised blocks. Refer to Notes 1, 2 and 3 for Mineral Resource reporting and previous RC and diamond drilling activities.

Intercepts support and may extend the pit-constrained maiden Inferred Mineral Resource[1] of 180,000oz @ 1.0g/t Au reported in February this year, particularly toward the north-east where the Company is pleased to see a wide mineralised zone taking shape (Figures 10 and 13).

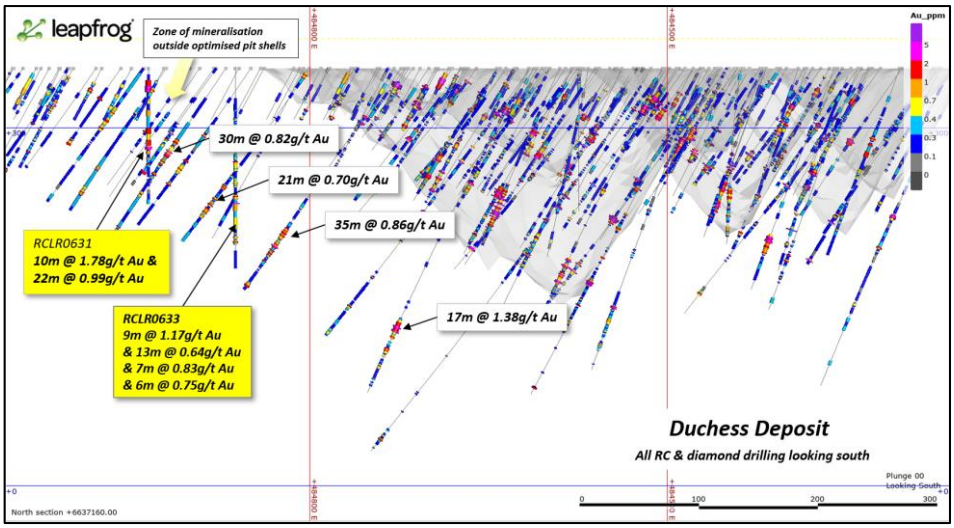

*Figure 13. View of **all RC and diamond drilling** and optimised pit shells[1] at the Duchess Deposit, looking south and showing **new mineralised zone to the east of the deposit** and selected intercepts. Yellow boxes are drill holes reported this Quarter. Duchess Mineral Resources [1] are confined to within the pit shells (grey) and represent the current Mineral Resource boundary. Refer to Notes 1, 2 & 3 for details of Mineral Resource reporting and previous RC and diamond drilling activities.*

DISCUSSION AND Q4 2020 DRILL PROGRAM

Apollo made excellent drilling progress during the September Quarter, with significant results on several fronts. Ongoing, fully funded drilling to the end of 2020 will continue to build on existing targets and upgrade the Mineral Resource estimates by focusing on:

1. Selected infill drilling to upgrade lower confidence and Inferred Mineral Resources ahead of future re-estimation.

2. Extending gold mineralisation in and around the constraining pit-shells.

3. Shallow RC exploration drilling at Cleo and other under-explored and untested structural, Induced Polarisation (IP) and geochemical targets such as in the areas between the Rebecca, Duchess and Duke deposits; and

4. Diamond drilling below the Rebecca deposit to track open structures into unexplored target areas, with the aim of outlining potential high-grade positions suitable for future underground mining. Some of the planned holes will also provide important geotechnical information.

About Rebecca Mineral Resources

In February, this year Apollo delivered a maiden JORC 2012 Mineral Resource estimate for each of the three identified gold deposits (**Rebecca**, **Duchess** and **Duke**) (Refer to *ASX: AOP 10th Feb 2020 "+1.0 Million Ounce Maiden Gold Mineral Resources Lake Rebecca")*. The independently calculated

combined Mineral Resource estimate amounted to **27.1 million tonnes** at **1.2g/t Au** for a total **1.035 million** ounces of gold, **53%** of which is at **Indicated** status.

Importantly the Company considered high-level economic implications and reported Mineral Resources at a 0.5g/t Au cut-off & only those gold ounces constrained within A$2,250/oz optimised pit shells (Table 1). Gold mineralisation which lies beyond those pit boundaries was not included in the estimate.

Indicated				Inferred			Indicated & Inferred		
Deposit	*Tonnes*	*Grade g/t*	*Ounces*	*Tonnes*	*Grade g/t*	*Ounces*	*Tonnes*	*Grade g/t*	*Ounces*
Rebecca	**11,700,000**	**1.5**	**550,000**	**7,400,000**	**0.9**	**225,000**	**19,100,000**	**1.3**	**775,000**
Duchess				**5,700,000**	**1.0**	**180,000**	**5,700,000**	**1.0**	**180,000**
Duke				**2,300,000**	**1.1**	**80,000**	**2,300,000**	**1.1**	**80,000**
Total Indicated & inferred Mineral Resource							**27,100,000**	**1.2**	**1,035,000**

Table 1. ***Lake Rebecca Gold Project*** *maiden Mineral Resources February 2020. Notes: The Mineral Resources are reported at a lower cut-off grade of 0.5 g/t Au and are constrained within A$2,250/oz optimised pit shells based on mining parameters and operating costs typical for Australian open pit extraction of deposits of similar scale and geology. All numbers are rounded to reflect appropriate levels of confidence. Apparent differences may occur due to rounding.*

The Rebecca and Duchess mineralised systems are supplemented by a significant low-grade halo that adds volume and contributes to an overall geometry that appears suitable for bulk tonnage open pit mining. Importantly the **Rebecca** deposit (Figure 2) contributes 75% of the total Mineral Resource and has been drilled to a moderate level of confidence, with **550,000oz** (**71%**) of that Mineral Resource reported at **Indicated** Resource status.

Ongoing extensional drilling has continued to demonstrate the strength of the Rebecca mineralised system, which comprises three major sub-parallel structures containing zones of disseminated sulphide hosted gold mineralisation (**Jennifer**, **Laura** and **Maddy**), flanked by stacked lower grade disseminated sulphide material. Together these extend over 1.7km in strike and several hundred metres in width.

While there are many additional financial considerations to be addressed in future economic studies, the Company believes the growing Lake Rebecca Mineral Resources point toward commercialisation. The Mineral Resource sits squarely in WA's Eastern Goldfields gold mining hub, looks robust at current gold prices, and is continuous at a variety of cut-off grades (Table 2).

Intercepts marked are where the reported intercept includes 1 or more composite sample, 1m sampling to follow. Intercepts calculated at 0.50g/t lower cut, a minimum sum of 1.0 gram of gold in intercept and allowing for up to 2m of internal dilution. Anomalous zones are tabulated to highlight significant geological zones of >0.20g/t Au.*

Lake Rebecca Gold Project Notes:

Note 1. The information on the Lake Rebecca Gold Project JORC (2012) Compliant Mineral Resource is extracted from ASX: AOP 10th February 2020 "+1.0Moz Maiden Mineral Resources Lake Rebecca". Detailed information on the Mineral Resource estimation is available in that document. Refer to Apollo Consolidated website (www.apolloconsolidated.com.au) and at the ASX platform. The Company is not aware of any new information or data that materially affects the information in that announcement. Also, Apollo confirms that the material assumptions and technical parameters underpinning the estimates in that announcement continue to apply and have not materially changed. The aggregate resource figure referenced in this announcement is broken down into JORC-compliant resource categories is set out in preceding tables.

Note 2. *For details of past Rebecca Project drilling and results please refer to ASX: AOP releases: 26 August 2012, 28 September 2012, 8 October 2015, 1 September 2016, 9, 13, 20 & 24 October 2017, 15 January 2018, 12th April 2018, 7 May 2018, 17th July 2018, 13th & 30th August 2018, 21st September 2018, 15th October 2018, 17th December 2018, 15th March 2019, 21st May 2019, 12th, 18th & 27th June 2019, 5th August 2019, 3rd September 2019, 1st October 2019, 4th November 2019, 3rd December 2019, 6th January 2020, 16th March 2020 & 6th April 2020.*

Note 3. RC and diamond drilling by previous explorers Placer Exploration Ltd, Aberfoyle Resources Ltd and Newcrest Operations Ltd are detailed in WAMEX Mineral exploration reports available in Open File at the West Australian Department of Mines and Petroleum – drilling & assay details are detailed in report numbers A33425, A48218, A51529, A55172 & A65129

1.2 Yindi Project & Larkin Projects (Apollo 100%) (Gold)

During the Quarter, **a new 204km^2 exploration licence application** was made in the area immediately to the west and south of the **Yindi** project, substantially adding to the Company's holding in the area. Yindi is strategically placed between Saracen Mineral Holdings' **Carosue Dam** operation, and Breaker Resources' **Lake Roe** discovery on the same prospective Keith-Kilkenny structural corridor (Figure 14). Compilation of past exploration activity will be carried out ahead of grant.

Existing Yindi tenement E28/2444 underwent a statutory partial surrender, retaining its key prospect areas including the Airport prospect where historical drilling[4] of gold-in-soil anomalism has reported drilling results of **11m @ 2.15g/t Au**, 12m @ 0.49g/t Au and 7m @ 0.96g/t Au.

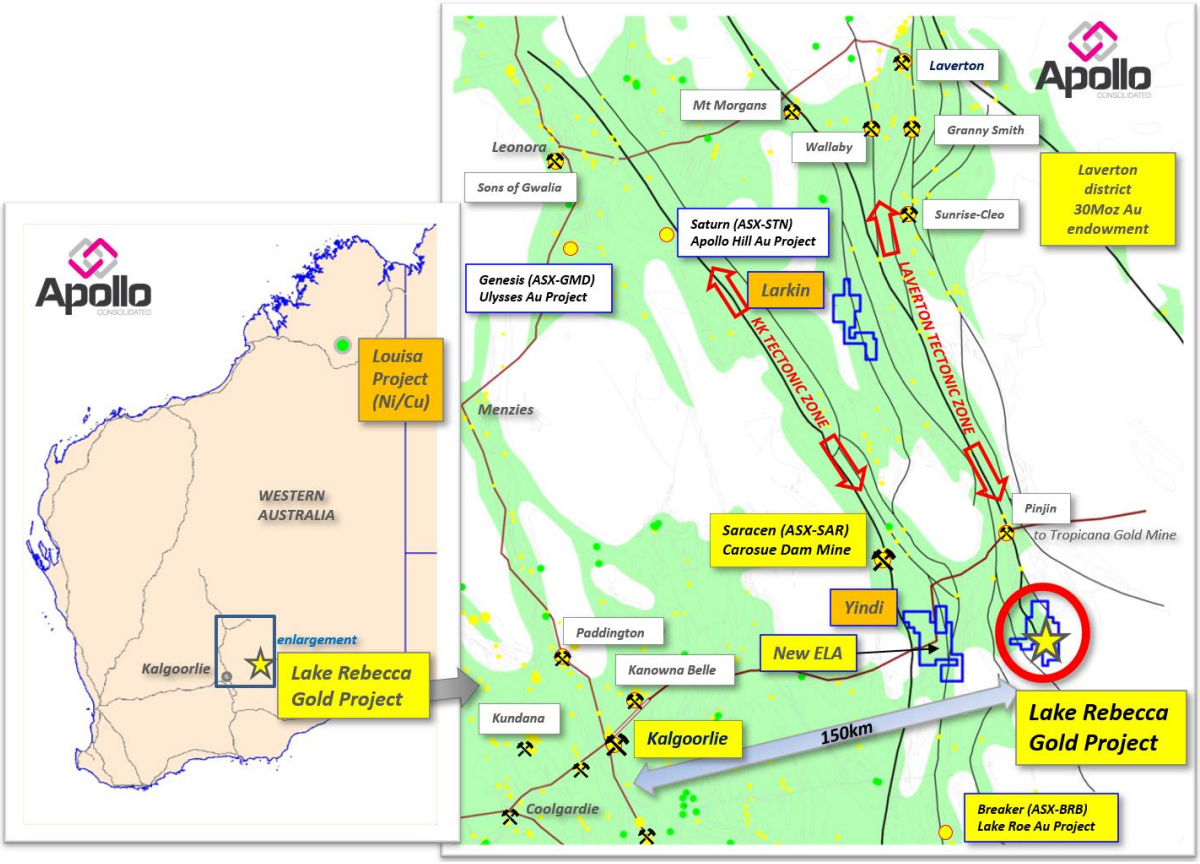

Figure 14. Project location plan Apollo Eastern Goldfields projects and showing location of new ELA E28/3067 to the south and west of Yindi.

During the Quarter, a traverse of reconnaissance aircore drilling was carried out over soil-covered greenstone terrain at each of the Yindi (14 aircore holes for 760m) and **Larkin** (18 aircore holes for 964m) projects. No significant (>0.20g/t Au) assay results were returned from this work.

The Company continues to view the projects as important landholdings on key structural corridors, with potential to deliver new mineralisation in under-explored soil-covered targets.

Note 4. Past reporting of drilling at the Airport prospect is detailed in WAMEX Mineral exploration reports available in Open File at the West Australian Department of Mines and Petroleum, report numbers a49428 & a97218.

1.4 Louisa Project (Apollo 100%, farm-out and JV with Independence Group NL) (Ni-Cu)

The Louisa Project is situated in the southern Kimberley region of WA and is prospective for intrusive-hosted Ni-Cu sulphide systems, in a geological setting broadly similar to the Savannah Ni-Cu mine (ASX: PAN) located 220km to the east (see inset Figure 15).

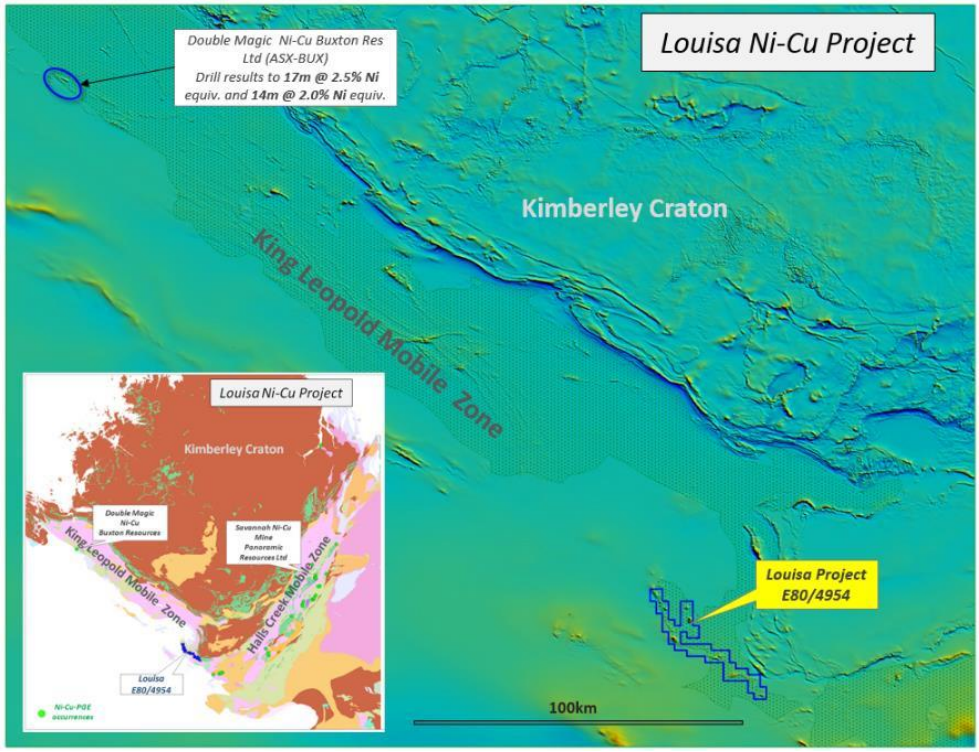

Figure 15. Louisa Nickel-Copper Project - regional magnetics and simplified geological setting

Independence Group NL (ASX: IGO) *(See ASX: AOP 14th October 2019 "Louisa Nickel Project Attracts Strong Partner")*. is exploring for nickel-copper sulphide mineralisation in the region.

An Independence subsidiary may earn a 75% interest in the Project by spending a total of $3.35M within 24 months and then may elect to continue to spend an additional $3M within four years. Should a discovery be made at Louisa under the farm-in, the Company retains the ability to participate as a project level partner, a position that should deliver significant value to shareholders.

COVID-19 related travel restrictions in the Kimberley area have restricted on-ground exploration in the near term, and the Company has agreed to a Delay Event, extending the period in which Independence can earn into the property.

2. West African Gold Projects – Cote d'Ivoire

Seguela Project (Royalty)

Apollo continues to hold a valuable 1.2% NSR royalty interest over the **Seguela Gold Project** in central Cote d'Ivoire, where successful Canadian-listed West African gold miner **Roxgold Inc** (TSX:

ROXG) reported a positive Preliminary Economic Assessment ("PEA") earlier in the year *(please refer to TSX: 14th April 2020).*

The PEA was based on a revised Mineral Resource Statement (prepared in accordance with Canadian National Instrument 43-101 – Standards of Disclosure for Mineral Projects ("NI 43-101") detailed in the PEA of and Indicated Mineral Resource of **529,000 ounces at 2.3 g/t Au**, and Inferred Mineral Resource of **508,000 ounces at 2.9g/t Au**, over four nearby deposits.

Roxgold has continued to report strong exploration results and intention to build on the resources ahead of advanced mining studies.

Apollo is of the view that with combined Indicated and Inferred Mineral Resources of over 1Moz and at the reported grades, the Project has strong potential for commercial development. Roxgold has stated its intent to advance to feasibility studies.

3. Corporate & Financial

As at 30 June 2020 Apollo's consolidated cash balance was $19.8M (including funds held on trust for Apollo's Ivorian subsidiaries). An ASX Appendix 5B for the quarter accompanies this report.

Payments to related parties of the entity and their associates during the quarter totalled $112k, comprising $91k for Directors and legal fees (on an arm's length basis) and $21k for payment of salaries related to exploration activities.

For more information on Apollo and its Projects please refer to *ASX: AOP 13th October 2020 "AOP Presentation Materials Diggers & Dealers October 2020"*, latest ASX: AOP announcements, and www.apolloconsolidated.com.au

The information in this release that relates to Exploration Results as those terms are defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserve", is based on information compiled by Mr. Nick Castleden, who is a director of the Company and a Member of the Australian Institute of Geoscientists. Mr. Castleden has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which they are undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserve". Mr. Castleden consents to the inclusion of the matters based on his information in the form and context in which it appears.

The information contained in this announcement that relates to Mineral Resource estimates for the Rebecca, Duchess and Duke gold deposits is based on information compiled by Mr. Brian Wolfe, an independent consultant to Apollo Consolidated Limited, and a Member of the AIG. Mr. Wolfe has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr. Wolfe consents to the inclusion in this announcement of the matters based on his information in the form and context in which it appears

Exploration results by previous explorers referring to the Rebecca Projects are prepared and disclosed by Apollo Consolidated Limited in accordance with JORC Code 2004. The Company confirms that it is not aware of any new information or data that materially affects the information included in this market announcement. The exploration results prepared and disclosed under the JORC 2004 have not been updated since to comply with the JORC Code 2012 on the basis that the information has not materially changed since it was last reported.

Appendix

In accordance with Listing Rule 5.3.3. AOP provides the following information in relation to its mining tenements.

Mining tenements held at the end of the quarter:

Project	Location	Tenement Number	Status	Beneficial interest
Rebecca	Eastern Goldfields WA	E28/1610	Granted	100%
Rebecca	Eastern Goldfields WA	E28/2146	Granted	100%
Rebecca	Eastern Goldfields WA	E28/2275	Granted	100%
Rebecca	Eastern Goldfields WA	E28/2733	Granted	100%
Rebecca	Eastern Goldfields WA	E28/2913	Granted	100%
Yindi	Eastern Goldfields WA	E28/2444	Granted	100%
Yindi	Eastern Goldfields WA	ELA28/3067	Application	100%
Louisa	Kimberley, WA	E80/4954	Granted	100%
Larkin	Eastern Goldfields WA	E39/1911	Granted	100%

Mining tenements acquired during the quarter:

Yindi	Eastern Goldfields WA	ELA28/3067	Application	100%

Beneficial percentage interests held in farm-in or farm-out arrangements at the end of the quarter:

Farm-in or Purchase Agreements

NIL

Farm-out, Sale or Royalty Agreements

1. Apollo subsidiary Aspire Minerals holds a 1.2% NSR held over the Seguela Project in Cote d'Ivoire

2. Private company Maincoast Pty Ltd holds a 1.5% NSR over the area of E28/1610 which includes the current Rebecca Project gold prospects. Maincoast has advised it has agreed to sell the NSR to TRR Services Australia Pty Ltd, and this transaction is expected to settle Q4 2020.

(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
