

ASX Release

Report for the Quarter Ended 30 September 2020

30 October 2020

Report for the Quarter Ended 30 September 2020

Dart Mining NL (“Dart” or “the Company”) is pleased to present its Quarterly Report for the three-month period ending 30 September 2020 and to provide commentary and update to shareholders.

Commenting on the Quarter, Managing Director James Chirnside said:
“The September quarter saw Dart Mining engaged in constant drill testing on its key Gold projects in NE Victoria. Assays have been very encouraging to date, and we look forward to delivering more results throughout the December quarter. Subsequent activities have seen drill testing commencement at Sandy Creek”.

OPERATIONS REPORT

Low impact, RAB drilling operations commenced at the Buckland and Sandy Creek gold projects during the quarter (Figure 1).

BUCKLAND GOLD PROJECT

The Buckland Gold Project drill program was designed to test the northern and southern extent of mineralisation at the Fairley’s prospect where previous drilling and sampling by Dart has revealed very promising gold mineralisation (see ASX Announcement 01/09/2020). The drilling was designed to assess the subsurface extent of several rewarding chip and channel samples and targeted mineralisation 70m north of and 125m south of previous drilling, resulting in a concentration of drilling along a strike length of 300m. Due to steep terrain, drilling occupies a vertical range of 260m (Figure 2).

A total of 805m in 18 shallow RAB holes was completed at Fairley’s prior to the end of September. All samples have been split and submitted to ALS in Adelaide for analysis. Assay results are pending.

The Buckland Gold Project is located 200km north-east of Melbourne and contains the regionally extensive Fairleys Shear Zone which controls the location of significant gold mineralisation in the Buckland Goldfield. Dart’s exploration work has shown the Fairleys Shear Zone to consist of multiple individual mineralised shears, each several kilometres long (ASX 20 Aug 2019, ASX 2 Sept 2019). These shears are interpreted to be up to, or greater than 25m wide, and typically have a relatively narrow, high-grade quartz-sulphide core enveloped by wider, low to medium-grade disseminated sulphide mineralisation (ASX 13 Dec 2019). The scale of the shear-related mineralisation offers excellent potential for delineating a large-scale gold deposit.

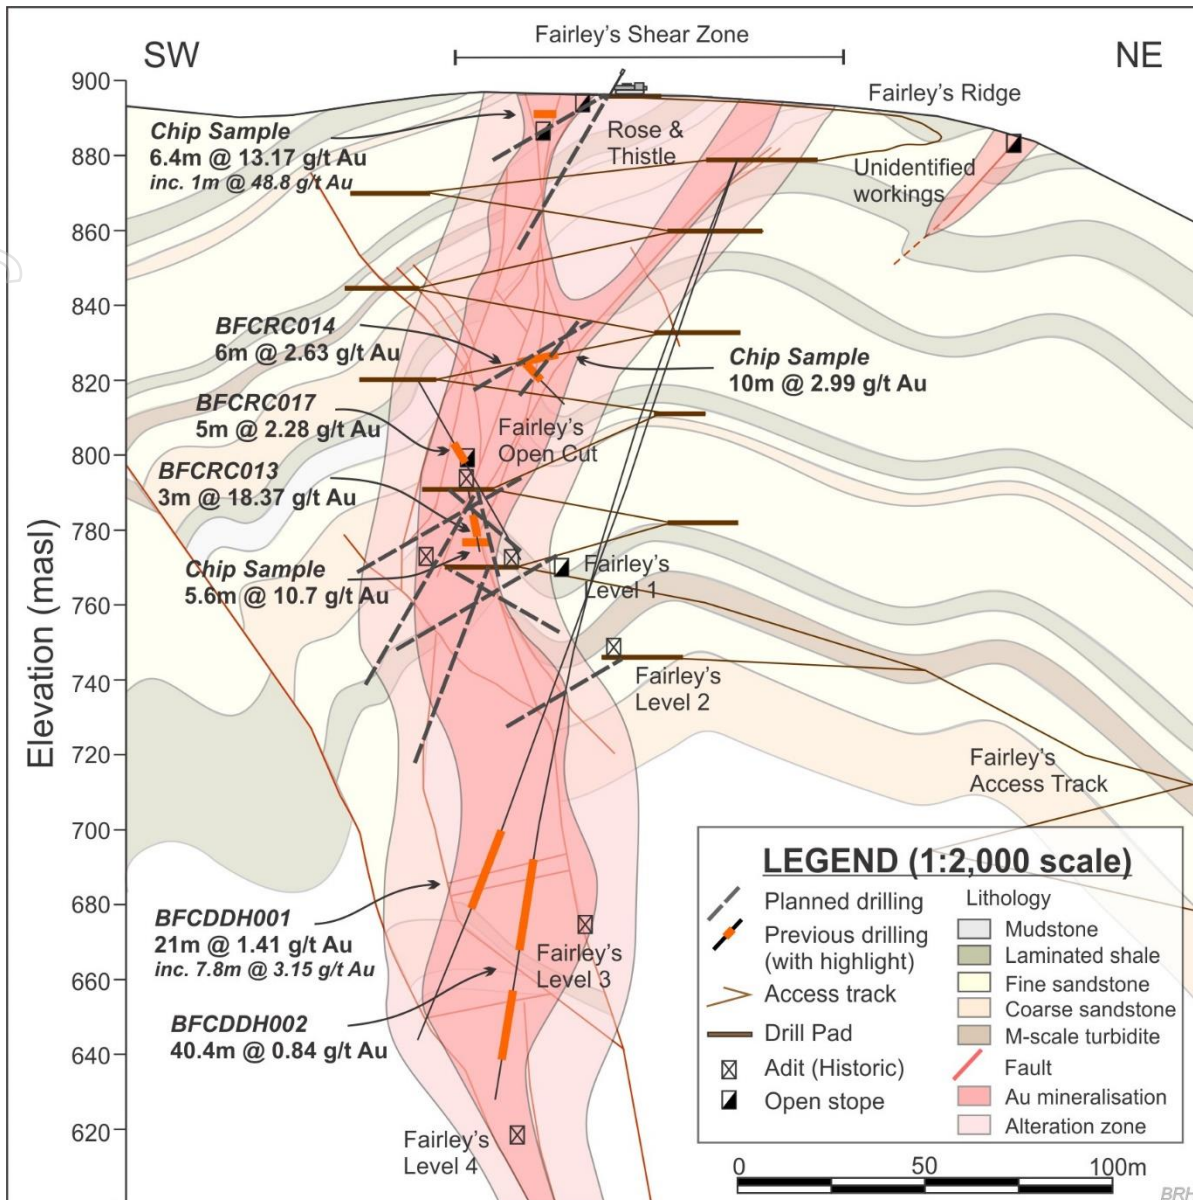

Figure 2: Cross-section of targeted mineralisation at Fairley's. Selected highlights from previous drilling (Dart ASX 15 December 2008, Dart ASX 31 December 2008) and chip sampling shown (Dart ASX December 2019; Dart ASX February 2020). Note that cross section (B) is compiled from approximately 150m of transposed data.

SANDY CREEK GOLDFIELD

A program of approximately 1,000m of RAB drilling across five targets at Sandy Creek commenced late in September following the completion first phase drill program at the Buckland Gold Project.

A total of 12 holes, for 402m had been completed prior to the end of the quarter. The program is ongoing and assay results for the first 12 holes are pending.

The Sandy Creek and Tallandoon goldfields in northeast Victoria are known for historical production of exceptionally high-grade gold from narrow lodes (up to 3.5 kg/t). Located 60km south of Albury-Wodonga, detailed mapping and sampling by Dart Mining geologists have redefined the exploration and mineralisation model for these goldfields. Exploration focus has now shifted to higher volume, disseminated gold sulphide mineralisation in altered granites adjacent to high-grade, narrow-vein gold mineralisation.

During the quarter, Dart Mining reported exceptional results from recent mapping and sampling activities at Sandy Creek Gold (see ASX Announcement 03/07/2020). Rock chip and soil sampling has provided evidence for multiple zones of gold mineralisation associated with altered granite at structural intersections on the periphery of the Yabba Granite.

First-phase drilling at Sandy Creek is focused on the I.X.L, Honeysuckle, Morning Star, Shamrock and O'Dell's prospects, with their prevalence of disseminated gold-sulphide mineralisation, and potential for producing a high tonnage target. Historically, these prospects were worked for low tonnage, narrow vein, high grade gold (Dart ASX July 2020). Dart geologists have reassessed the mineralisation style and identified significantly thick intersections of lower grade gold mineralisation in hydrothermally-altered granites and the first phase of drill testing in this program is designed to identify the extent of low-grade gold-sulphide mineralisation beyond the narrow confines of existing workings. Historic mining targeted narrow, high-grade gold mineralisation, and provides limited indication as to the extent of the disseminated gold-sulphide mineralisation of the Yabba Granite.

Figure 3: Cross-section through the Shamrock prospect showing sampling highlights and the conceptual geological model for altered granite mineralisation in the Sandy Creek Goldfield. High-grade silica-gold mineralisation is present along narrow veins (red lines), whereas granite intrusion and subsequent hydrothermal alteration has exploited fractures (grey lines), resulting in an inconsistent distribution of altered, gold mineralised granite. Section is oriented northeast-southwest and drawn to scale (1:1000)

LITHIUM EXPLORATION UPDATE

The Company is reviewing its pegmatite prospects with a view to undertaking further exploration for lithium and rare earth minerals in northeast Victoria.

ACTIVITIES SUBSEQUENT TO THE REPORTING PERIOD

Buckland Gold Project – Drilling Results

During October, the company received all assay results from sampling from the Fairley's drilling program discussed above (see ASX Announcement 19/10/2020). The results revealed further high-grade gold mineralisation at Fairley's and extended the mineralisation strike by over 100m. Significant intersections included:

Table 1: Significant intersections from recent Fairley's RAB Drilling

Hole ID	From (m)	To (m)	Interval (m)	Au (ppm)	Comments
BFCRAB001	19	26	7	1.27	South of Fairley's Level 1 open cut

	21	23	2	1.56	
	30	32	2	0.97	
	46	47	1	0.64	
BFCRAB014	35	37	2	2.58	Targeting mineralisation associated with Rose & Thistle
BFCRAB013	34	36	2	1.58	Targeting mineralisation associated with Rose & Thistle
	40	41	1	0.92	
BFCRAB015	29	31	2	0.87	Targeting small structure east of Fairley's main line
BFCRAB017	4	14	10	2.27	Vertical hole over structure dipping at 57 degrees SW, near Rose & including
	7	9	2	5.52	Thistle workings
BFCRAB018	26	29	3	2.62	Above Rose & Thistle workings

Notes:

1. Significant intervals are calculated using a 0.5ppm Au lower cut-off and no more than 2m of internal dilution
2. All intervals are down hole thicknesses with true widths yet to be determined

The results have demonstrated that significant widths and grades of gold mineralisation occur across a large strike and depth extent at the Fairley's Prospect. Although most of the holes were relatively shallow, the varying topography allows the Fairley's Shear Zone to be tested at a significant vertical range along strike. The program successfully extended the drilled strike extent to approximately 240m and has shown that both narrow, high-grade gold and broad, disseminated, lower grade enveloping mineralisation exist across the full strike and depth extent tested to date. Much of the current drill program was designed to also confirm that surface rock and channel sampled silica-sericite-sulphide altered and mineralised rock extends to depth and has successfully demonstrated that this is indeed the case. The Fairley's Shear remains open along strike and at depth and Dart believes that great potential exists at the prospect for the discovery of a significant body of gold mineralisation.

The Fairley's Prospect represents a small portion of a 17.5 km-long shear zone (which remains open to the south) that has been identified in the last two years by Dart through extensive soil sampling and mapping that have revealed strong As and Au anomalism.

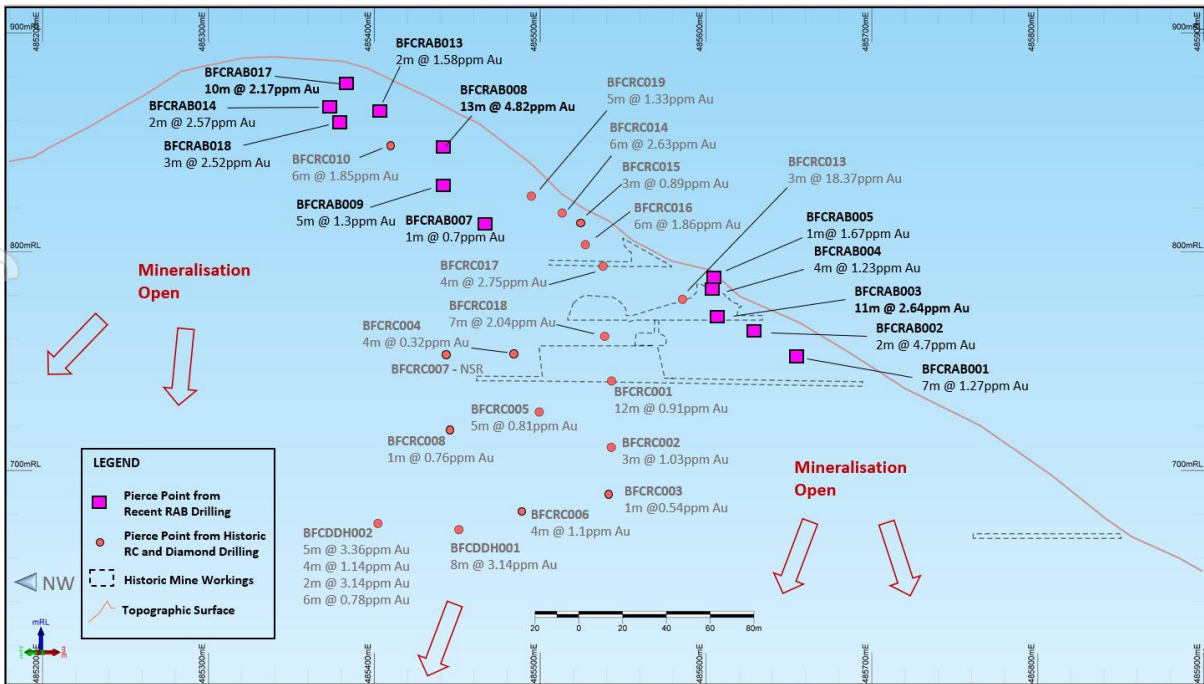

Figure 4: Oblique Long Section looking northeast through the Fairley's mineralised zone. Recent RAB intercepts are marked by purple squares. Mineralisation remains open and untested along strike and at depth. Historic drill results (pink spots) are described in ([Dart ASX 15 December 2008](#), [Dart ASX 31 December 2008](#), [Dart ASX 30 January 2015](#)).

CORPORATE

Entitlement Offer

During the quarter, Dart Mining introduced and completed an Entitlement Offer of one New Share offered for every three shares held by Eligible Shareholders at an issue price of \$0.20 per share and one free attaching option for every new share issued, exercisable at \$0.30 and expiring on 30 September 2022 has now closed.

The Company received acceptances from Eligible Shareholders for a total of 12,780,808 New Shares raising \$2,556,162.

The number of New Shares offered pursuant to the Offer was 24,986,369 resulting in a shortfall of 12,205,561 New Shares, being 48% of the shares on offer.

The Company's cash position at the end of the September quarter was approximately \$2.419m.

TENEMENT STATUS

During the quarter, the Company submitted applications for 5 additional exploration licences in northeast and eastern Victoria (Table 2). The five new applications total 2,326km² in area and are awaiting formal acceptance by the Department of Earth Resources.

Table 2: Tenement Status to October 2020.

About Dart Mining

Dart Mining (ASX: DTM) floated on the ASX in May of 2007 with the aim of evaluating and developing several historic Goldfields as well as substantiating a new porphyry province in NE Victoria. The area is prospective for precious, base, and minor metals. These include Lithium, Gold, Silver, Copper, Molybdenum, Zinc, Tungsten, Tin, Tantalum, and a host of other important minerals. Dart Mining has built a strategic gold footprint in the Central and North East Region of Victoria where historical surface mining and alluvial gold indicates the existence of potentially significant gold endowment.

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
