

HSC receives additional Purchase Orders from ACH Group

5 March 2021

- **HSC extends its relationship with ACH Group**
- **Further orders for two additional residential care sites**
- **New purchase order received for \$618,000**

HSC Technology Group Ltd (ASX: **HSC**) ("**HSC**", or the "**Company**") is pleased to announce that the Company has received further purchase orders for approximately \$618,000, from the Aged Care & Housing Group Inc ("**ACH Group**"), relating to a further two sites of residential care in South Australia.

As previously announced on 28 January 2020, HSC was awarded a tender to provide assistive technology to multiple ACH Group sites in South Australia. The ACH Group tender sought a solution targeting efficiency and optimisation through the use of IoT technology, across its residential aged care sites, which currently includes more than 800 residents collectively. The assistive technology scope includes nurse call tracking, real time location systems (RTLS), and the TALIUS IoT solution.

HSC Managing Director, Graham Russell, commented: "We are very pleased to extend our relationship with ACH for a further two sites. The HSC IoT technology has been implemented and proven across a number of existing ACH sites, so these purchase orders are a very positive reflection on the success of the Project. We are continuing to focus on the improvement of the lives of ACH Group's aged residents, and our team is looking forward to the successful roll out of all sites in the near future."

Mr Russell also noted that the HSC solution being implemented at ACH was directly aligned to a number of recommendations from the Final Report of the Royal Commission into Aged Care, relating to the use of assistive technology.

This announcement has been authorised by the Board of Directors of HSC Technology Group Ltd.

About HSC Technology Group

HSC provides a range of Connected Health and Smart Home solutions

The HSC assistive technology platforms allow seniors and people with disabilities to live independently via “Ageing in Place” solutions, through the use of data analysis, as well as human monitoring, to determine residents’ routines and detect anomalies. These early insights allow for better decision-making by care providers and families, allowing more focused service, minimising unnecessary care and facilitating welfare checks in a more responsive manner.

HSC helps protect and connect our elderly and people with disabilities with a scalable healthcare technology platform integrated with leading third party providers to ensure end-to-end solutions for Connected health.

HSC Technology Group’s Software as a Service (SaaS) data analytics platform TALIUS uses next generation Machine Learning and Artificial Intelligence to deliver decision-making insights that improves people’s safety, independence, autonomy and most importantly improves their lives.
