CHANGES IN PRESENTING MARKETS INCOME COMPOSITION

- Markets customer franchise income is now presented across four business lines: FX, Rates, Credit & Capital Markets, and Commodities
- There are no changes to the presentation of Balance Sheet, Derivative Valuation Adjustments or VaR
- This revised presentation better reflects the underlying nature of ANZ’s Markets business as a customer franchise, particularly as sales and risk management activities have become more integrated
- Both new and the previously disclosed format of Markets’ disclosure has also been included

MARKETS AVG VALUE AT RISK (99% VAR)

CONSISTENCY OF MARKETS INCOME

MARKETS INCOME HAS HISTORICALLY FOLLOWED CLOSE TO A NORMAL DISTRIBUTION, WITH A POSITIVE SKEW

MARKETS HISTORICAL MONTHLY INCOME

CHARACTERISTICS OF MONTHLY INCOME DISTRIBUTION

- Over the last 6 years, monthly Markets income has followed close to a normal distribution, but with positive skew:
 - Average monthly income ~\$175m with a standard deviation of ~\$50m. Stability is driven by a set of “core” customers who deal with ANZ Markets on a regular basis and across multiple geographies & products
 - Under the risk and governance framework implemented by the current management team (since March 2016), approx. 3 in 4 months have delivered income >\$150m and every month has been >\$100m
- Franchise income tends to be higher during a “risk-off¹” environment in financial markets and/or when “bid-offer spreads” widen. This income is generated mainly on the back of increased customer activity and from providing continued liquidity support to customers during market dislocations
- The historical tendency for Markets to outperform in these environments has provided important diversification benefits to group revenues

1. A risk off environment is broadly defined as one in which one in which credit spreads widen, risk free bond yields fall, equities sell off, volatility increases and USD strengthens

REGULATORY CAPITAL

CAPITAL UPDATE

- Level 2 CET1 ratio of 12.4% (~12.5% pro forma) and 18.1% on an Internationally Comparable basis¹, which is well in excess of 'Unquestionably Strong' benchmark²
 - Benefits from credit impairment charge of +14bps, following \$678m of CP release, partly offset by \$187m of IP charge
 - CRWA migration benefit of \$7.2b (+21bps) mainly from Australia mortgages portfolio – associated with lower RWA intensity in part due to changes in household saving and spending patterns through the COVID period
 - Lower underlying RWA of \$11.2b (+32bps) predominantly in the Institutional business
- APRA Level 1 CET1 ratio of 12.2%. Level 1 primarily comprises ANZ BGL (the Parent including offshore branches) but excludes offshore banking subsidiaries³
- Leverage ratio of 5.5% (or 6.2% on an Internationally Comparable basis)

Dividend

- Interim Dividend of 70 cents fully franked, representing 52% DPOR on a 1H21 cash ex. LNI basis
- The effect of the DRP to be neutralised by acquiring these shares on market

Regulatory Update

- Industry (via ABA) feedback to APRA on their capital reform proposals provided. Final impacts still to be determined. Further calibration of the proposals is expected
- The RBNZ has eased dividend restrictions

APRA LEVEL 2 COMMON EQUITY TIER 1 RATIO (CET1)

1. Internationally Comparable methodology aligns with APRA's information paper entitled International Capital Comparison Study (13 July 2015). Basel III Internationally Comparable ratios do not include an estimate of the Basel I capital floor. 2. Based on APRA information paper "Strengthening banking system resilience – establishing unquestionably strong capital ratios" released in July 2017. 3. Refer to ANZ Basel III APS330 Pillar 3 disclosures. 4. Excludes Large / Notable items & one-off items. 5. Mainly comprises the movement in retained earnings in deconsolidated entities and expected losses in excess of eligible provision shortfall. 6. Other impacts include movements in non-cash earnings, net foreign currency translation and impacts from Large / Notable items (non-capital deduction related).

- Level 2 includes Cash Profit and RWA movement from ANZ subsidiaries (e.g. ANZ Bank New Zealand) that are outside of Level 1.
- Level 2 CET1 ratio HoH increase is +7bps higher than Level 1, largely due to the retention of earnings in ANZ NZ due to RBNZ restrictions on dividends. This is partly offset by dividend repatriations from other Group subsidiaries outside of the Level 1 entity.

1. Excludes Large / Notable items & one-off items

2. Mainly comprises the movement in retained earnings in deconsolidated entities and expected losses in excess of eligible provision shortfall

3. Other impacts include movements in non-cash earnings, net foreign currency translation and impacts from Large / Notable adjustments (non-capital deduction related)

CET1 AND LEVERAGE IN A GLOBAL CONTEXT

CET1

- Regulators globally have provided specific COVID related transitional arrangements, ANZ has utilised public CET1 levels and adjusted for Capital treatment of ECL provisioning where available
- No adjustments have been made for RWA concessions related to COVID (i.e. mortgage deferrals)

LEVERAGE RATIOS^{1,2,3}

Leverage

ANZ compares well on leverage, however international comparisons are more difficult to make given the favourable treatment of derivatives under US GAAP

1. CET1 and leverage ratios are based on ANZ estimated adjustment for accrued expected future dividends, COVID transitional arrangements for expected credit loss and leverage exposure concessional adjustments where details have been externally disclosed. ANZ ratios are on an Internationally Comparable basis. All data sourced from company reports and ANZ estimates based on last reported half/full year results assuming Basel III capital reforms fully implemented 2. Based on Group 1 banks as identified by the BIS (internationally active banks with Tier 1 capital of more than €3 billion) 3. Includes adjustments for transitional AT1 where applicable. Exclude US banks as leverage ratio exposures are based on US GAAP accounting and therefore incomparable with other jurisdictions which are based on IFRS

COMMERCIAL PROPERTY OUTSTANDINGS BY REGION

COMMERCIAL PROPERTY OUTSTANDINGS BY SECTOR

- Commercial lending activity was relatively subdued during 2020. Liquidity support was provided to a number of strongly rated REITs and Funds, which have been repaid leading to a reduction in outstandings across Australian clients
 - Decline in NZ volumes was primarily driven by exchange rate movements
 - The APEA portfolio remained stable in 1H FY21 with exposure predominantly to large, well rated names in Singapore and Hong Kong
-
- Composition of the Commercial Property book remained unchanged with a slight uptick in the Office (driven by exposure to Premium / A-grade assets with strong lease covenants) and Industrial (with e-commerce driving strong demand) sectors
 - An absence of large scale CBD residential development has meant that residential development exposure has gradually declined
