

## ALDORO SET TO COMMENCE HIGH IMPACT DRILLING PROGRAM AT THE NARNDÉE NI-PGE PROJECT

- Diamond drilling contractor secured and expected to be on site in June.
- Aldoro targeting a 5,000 meter program with the ability to increase the program as results are received.
- Drilling to focus on confirmed high confidence anomalies VC1, VC 11 and VC8.
- Initial drilling will also act as dual-purpose inspection holes to gauge their suitability for Aldoro to conduct down-hole transient electro-magnetic (DHTEM) surveys.
- The Company is to investigate the deployment of a gradient array induced polarization (GAIP) survey over the 11 identified FLTEM targets, to further de-risk the identified drilling targets.

Aldoro Resources Limited (**Aldoro, The Company**) (**ASX:ARN**) is pleased to advise its shareholders of its maiden drilling program, due to commence at the Company's 100% owned Narndee project (**Project**) in June 2021. The Company has identified convincing drill-ready targets following the completion and data interpretation of a Fixed Loop EM (**FLTEM**) survey (**ASX announcement 13 April 2021**) by Southern Geoscience Consultants. Drilling plans on additional targets will be communicated post completion of Aldoro's methodical de-risking process as summarised in previous announcements.

Frontline Drilling (**Frontline, Contractors**) have been contracted to complete diamond drill holes over FLTEM target anomalies VC1, VC11 and VC8. The drill holes will also be assessed to determine their viability to conduct DHTEM surveys, which will be used to assess the size and nature of the in-hole bedrock conductors at depth, and which can also identify adjacent, off-hole bedrock conductors. The agreement with Frontline provides Aldoro with the flexibility to increase the drilling program beyond 5,000 meters.

Following consultation with its geological team and advisors, Aldoro is in the process of finalising a gradient array (GAIP) survey. GAIP is an electrical geophysical technique which has the ability to identify disseminated sulphide mineralisation. The Company plans to investigate the use of a GAIP survey over all 11 high-interest anomalies (VC1-VC11) identified from the FLTEM survey (**ASX announcement 12 March 2021**) to further de-risk the Project and refine target orientation.

### About Aldoro Resources

Aldoro Resources Ltd is an ASX-listed (**ASX:ARN**) mineral exploration and development company. Aldoro has a collection of gold and nickel focused advanced exploration projects all located in Western Australia. The Company's flagship project is the Narndee Igneous Complex, which is highly prospective for Ni-Cu-PGE mineralisation. The Company's other Ni-Cu-PGE projects include the Cathedrals Belt Nickel Project, with a significant tenement holding surround St George Mining's (**ASX:SGQ**) Mt Alexander Project, the Leinster Nickel Project (Ni) and the Windimurra Igneous Complex (Ni-Cu-PGE, Li). Aldoro's gold tenements, comprising the Penny South Gold Project, the Unaly Hill South (Au) and Kiabye Well (Au) and Ryan's Find, are currently under review.
