- ***Trousers Legs Gold Project Joint Venture: Geological Review by AMC Consultants***
- ***Drilling to Commence at Eudjina Gold Project***

The Directors of Hawthorn Resources Limited (ASX: HAW) are pleased to announce developments at 2 of its key projects in Western Australia, as set out below in the *Project location map*:

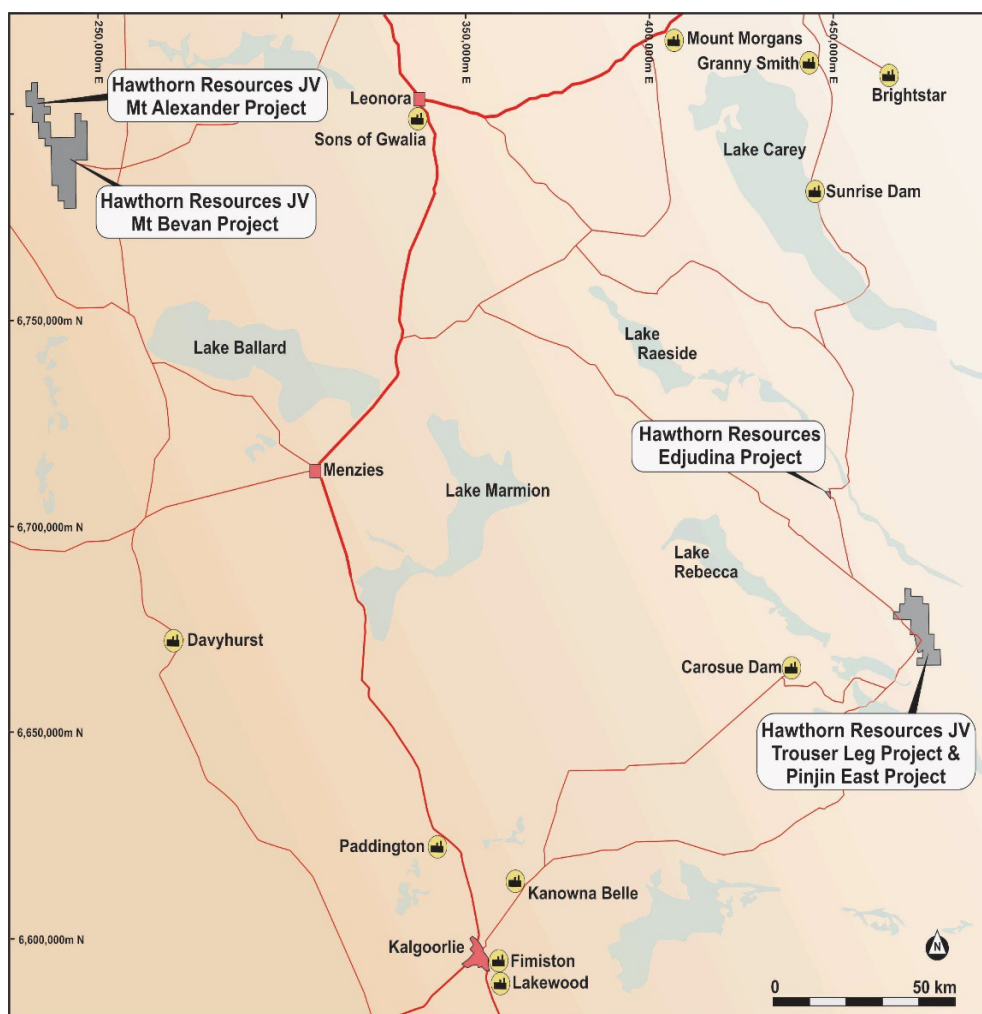

Figure 1 – Project location map – Western Australia Goldfields

TROUSER LEGS GOLD MINING JOINT VENTURE: Geological Review

(Hawthorn Resources 70%, Gel Resources 30 %): Manager - Hawthorn Resources Limited

Hawthorn Resources Limited (ASX: HAW) in its capacity as Manager of the Trouser Legs Joint Venture, is pleased to announce that AMC Consultants Pty Ltd has been engaged to undertake a geological review, gap analysis and a mining methods options assessment at the Joint Venture's Anglo-Saxon Gold Project (the Project).

Anglo-Saxon is located approximately 140 km north-east of Kalgoorlie at Pinjin in Western Australia within the prolific South Laverton Tectonic Zone (SLTZ) :

On completion of this scope of work, the Joint Venture will have sufficient information to make a business decision on whether to proceed to a pre-feasibility study (PFS) for the Project; completion is expected by late August.

The Trouser Legs Joint Venture in which the Anglo-Saxon project resides, is an unincorporated joint venture between the Company (70%) and GEL Resources Pty Ltd (30%).

EDJUDINA- GOLD PROJECT M31/481: Commencement of Drilling

(Hawthorn Resources Limited: 100%)

The Edjudina project area lies approximately 160 km to the north-east of Kalgoorlie in Western Australia and 20 kilometres to the east of the Porphyry Gold Mine (Northern Star Resources Limited). See figure 1 Project location map.

The Company is pleased to advise that it will commence a 600m Reverse Circulation (RC) drill campaign to investigate potential extensions of mineralisation into Hawthorn's M31/481, which is contiguous to Gibb River's (ASX: GIB) Neta Project. The historic Carlsen lode will be the focus of the current RC campaign.

The ML has had very little modern exploration or deep drilling due to the relatively hard calcrete surface which hindered early explorers despite many gold occurrences along the 15km long Edjudina trend.

The drilling programme is scheduled to commence on Thursday 1 July 2021.

END
