

1<sup>st</sup> SEPTEMBER 2021

## **OKLO INTERSECTS HIGH GRADE GOLD UP TO 39.9g/t AT DISSE, LOCATED WITHIN 2KM OF SEKO RESOURCE**

Oklo Resources Limited ("Oklo" or "the Company") is pleased to report high-grade gold intersections from Disse, located in close proximity to the Seko Mineral Resource within the 100%-owned Dandoko Project in west Mali.

### **HIGHLIGHTS**

- ▶ Infill diamond and reverse circulation drilling at Disse intersects significant intervals of high-grade primary gold mineralisation:
  - ▶ **6m at 13.05g/t gold** from 72m with the hole ending in mineralisation including,
    - ▶ **2m at 32.55g/t gold** including **1m at 39.90g/t gold**
  - ▶ **3m at 11.0g/t gold** from 101m including,
    - ▶ **1m at 26.0g/t gold**
  - ▶ **3m at 6.02g/t gold** from 84m including,
    - ▶ **1m at 16.30g/t gold**
- ▶ Disse extends over a strike length of 550m and was a small component of the Company's maiden Mineral Resource Estimate (MRE) announced in March 2021. Previous drilling was wide-spaced (100 - 150m sections) covering this part of the MRE and all material being classified as inferred.
- ▶ The new infill drilling has confirmed potential for high-grade shoot development at depth with maximum individual grades up to **39.9g/t gold** over 1m.
- ▶ Further assay results remain pending from the ongoing resource growth drilling at Seko and follow-up drilling at the recent Sari discovery.

**Oklo's Managing Director, Simon Taylor, commented:** "Since the announcement of our maiden Mineral Resource Estimate, we have remained very focused on testing new targets and previous targets in more detail for their resource growth potential. Disse is an emerging high-grade target following the confirmation of potential shoot development in fresh rock to compliment the largely shallow oxide resource at Seko.

*We are now busy planning the next phase of drilling and have retained the current drill rig which is scheduled to resume work in September following conclusion of the wet season. We look forward to the receipt of outstanding assay results, including from the recent Sari discovery. In the meantime, we are completing a 3D IP geophysical survey and passive seismic survey to assist in targeting potential high-grade feeder mineralisation in fresh rock below the extensive oxide mineralisation at Seko."*

The Company is pleased to report highly encouraging results from resource growth drilling at Disse, located to the immediate southwest of the Seko Mineral Resource within Oklo's flagship Dandoko Project.

The Dandoko Project is located within the Kenieba Inlier of west Mali, approximately 30km east of B2Gold's 7.1Moz Fekola Project and 50km south-southeast of Barrick Gold's 18Moz Loulo/Gounkoto complex. IAMGold's 2.0Moz Diakha/Siribaya gold resource projects are located to the immediate southwest of Oklo's ~505km<sup>2</sup> holding within this emerging world-class gold region (Figure 1).

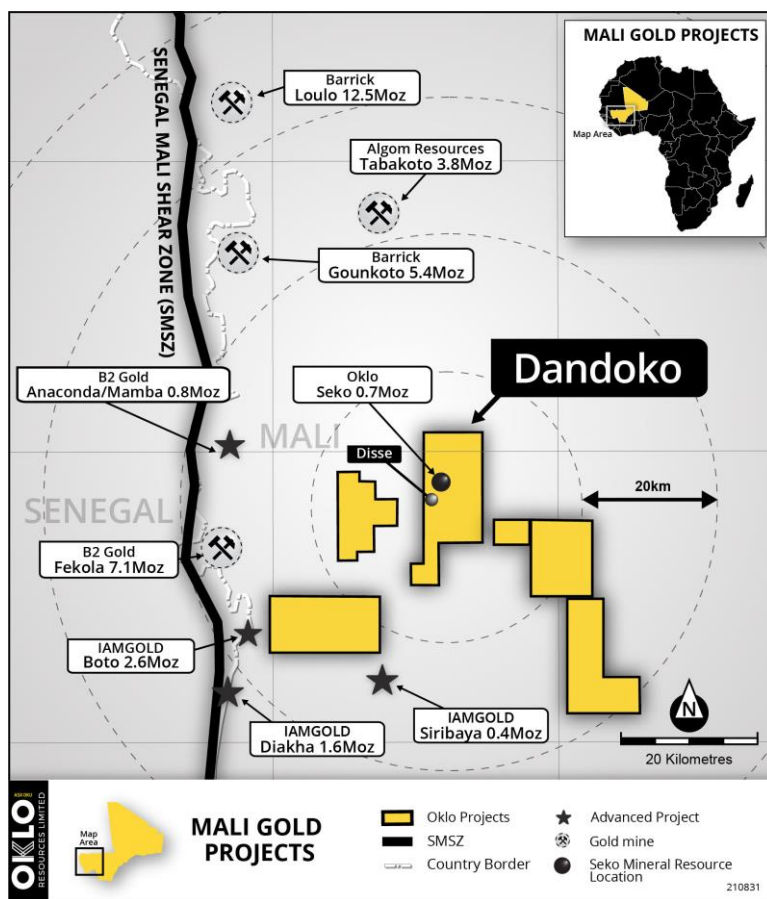

Figure 1: Location of Oklo's gold projects in west Mali.

## RESOURCE GROWTH OPPORTUNITIES

Since announcing the initial Mineral Resource Estimate (MRE) in late March 2021, the Company has completed the first phase of its resource growth initiative comprising 14,000m of drilling targeting strike and depth extensions at Seko and testing several geochemical and induced polarisation (IP) geophysical targets along the 15km Dandoko gold corridor and within adjoining projects (Figure 1).

Disse is a southeast-trending zone extending over 550m strike length to the south of SK3 that remains open at depth and along strike to the southeast. A modest Inferred Resource of 150,000t at 2.57g/t Au for 12,100 contained gold ounces was previously reported for Disse<sup>1</sup>.

Assay results reported in this announcement are from 4 RC holes totalling 498m, 1 diamond hole (DD) for 181m and 21 shallow aircore (AC) holes for 804m drilled at Disse.

<sup>1</sup> Refer to ASX announcement titled "Oklo Delivers Robust Initial JORC Resource" dated 30 March 2021

## DISSE

The current holes were drilled on infill sections to close up the previous wide line spacing of up to 150m. The holes intersected the following significant intervals of high-grade gold mineralisation in fresh rock:

- ▶ **6m at 13.05g/t gold** from 72m with the hole ending in mineralisation including,
  - ▶ **2m at 32.55g/t gold**
- ▶ **3m at 11.0g/t gold** from 101m, including **1m at 26.0g/t gold**
- ▶ **3m at 6.02g/t gold** from 84m, including **1m at 16.30g/t gold**

The results have indicated good potential for high-grade, southeast plunging shoots at depth that require further drill testing.

A line of shallow AC holes testing geochemical targets was drilled to the east of Disse. The western most hole (ACDS21-1052) returned 3m at 1.78g/t gold from 3m down hole and requires follow up.

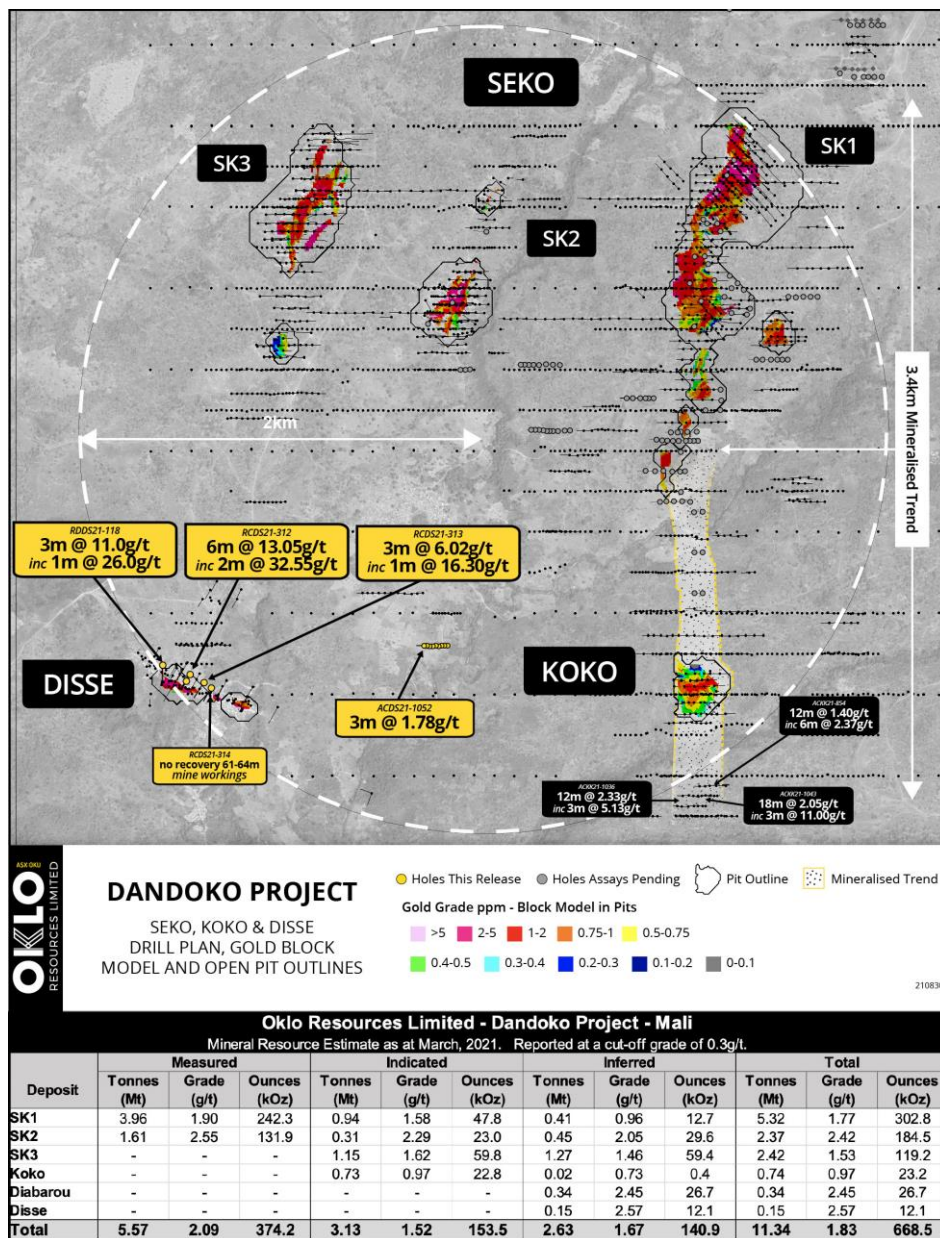

Figure 2: MRE prospect areas, mineralisation models, resource pit shell outlines and completed drilling at Seko.

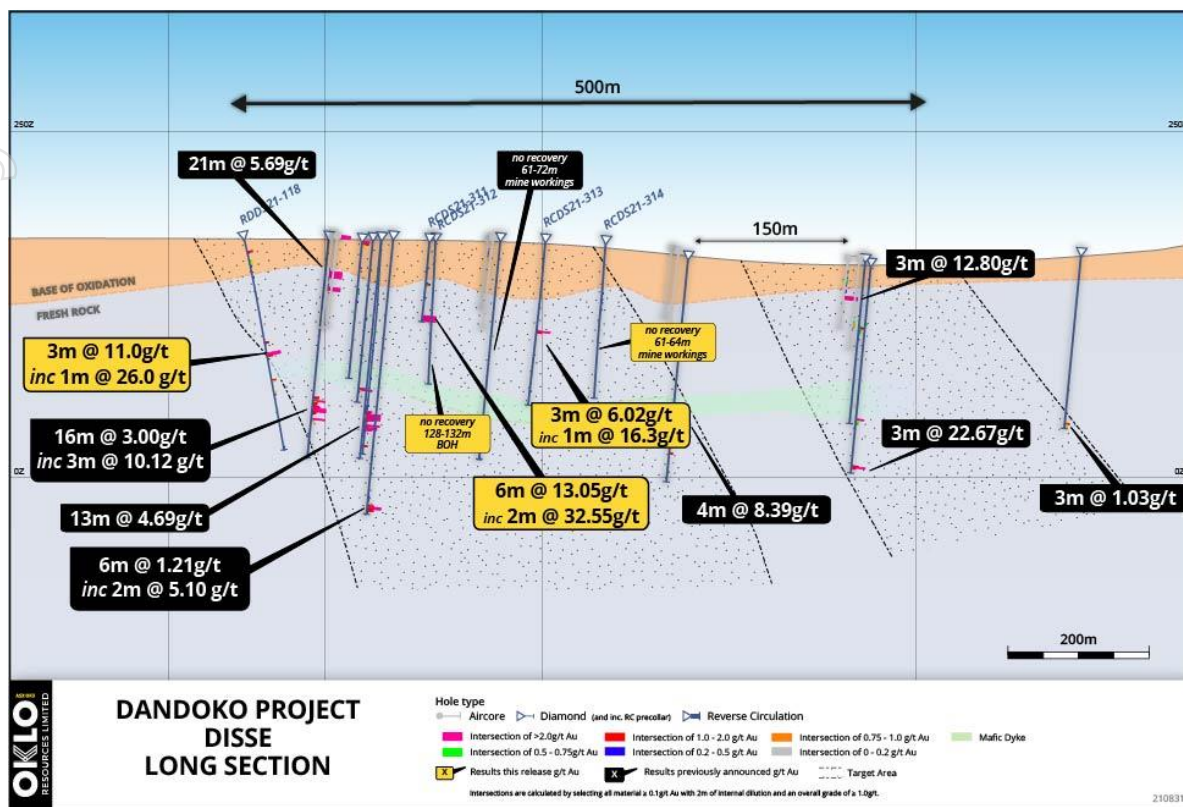

Figure 3: Disse Long Section showing previous results and new drilling results.

The significant drill hole intersections are summarised in Table 2, with all drill hole locations summarised in Table 3 and presented in Figures 2 and 3.

### ONGOING WORK PROGRAM

Drilling is currently paused for the wet season, with the existing drill contract extended for the recommencement of drilling in September. Work programs in progress include:

- ▶ Technical (scoping) and environmental studies.
- ▶ Compilation of all outstanding assay results and planning for the next phase of drilling.
- ▶ Detailed surveys to assist in targeting potential high-grade feeder zones in fresh rock below the extensive oxide mineralisation at Seko including:
  - ▶ A 3D IP geophysical survey over the SK1 and SK2 deposits; and
  - ▶ A passive seismic survey covering 30km<sup>2</sup> over the Seko resource area and immediate extensions to the north and south.

This announcement is authorised for release by the Board of the Company.

## ABOUT SEKO

In March 2021, the Company reported an initial Measured, Indicated and Inferred MRE of 11.3Mt at 1.83g/t gold for 668,500 contained gold ounces encompassing the Seko, Koko, Disse and Diabarou deposits (refer to ASX announcement dated 30 March 2021). All these deposits remain open and are expected to grow with ongoing drilling either along strike or at depth. The initial MRE allows significant optionality for a potential future mining operation, with the modelled cut-off grades providing the possibility for a range of production scenarios.

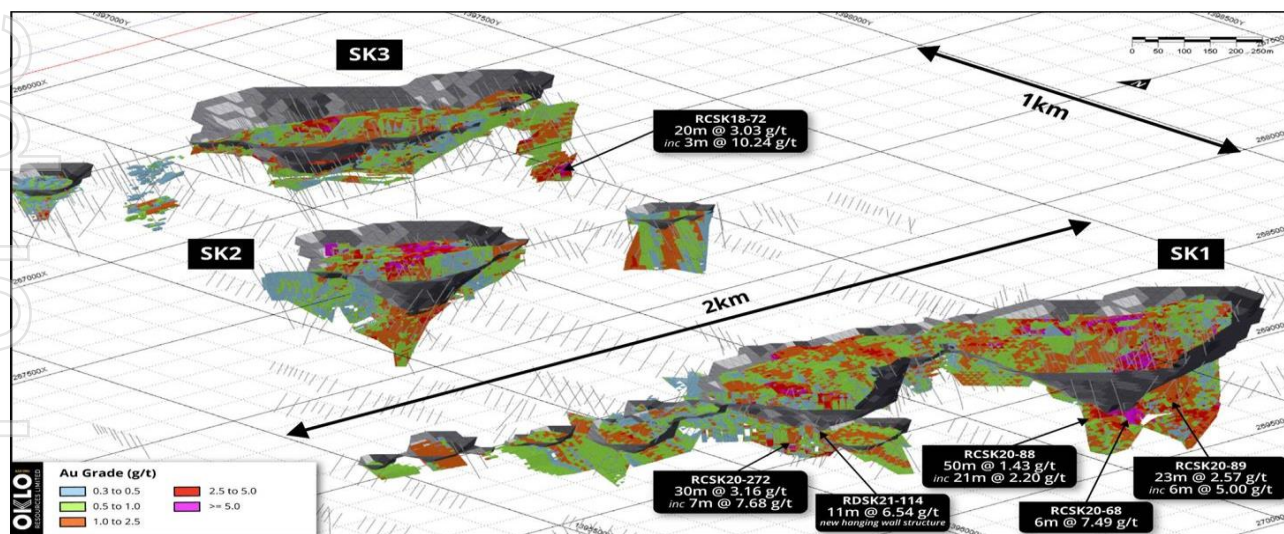

**Table 1: Dandoko Project - Mineral Resource Estimate**

JORC 2012 Classification	Tonnes (Mt)	In-Situ Dry Bulk Density (g/cm <sup>3</sup> )	Gold Grade (g/t)	Gold (kOz)
Measured	5.57	1.97	2.09	374.2
Indicated	3.13	1.99	1.52	153.5
Inferred	2.63	1.99	1.67	140.9
<b>Total</b>	<b>11.34</b>	<b>1.98</b>	<b>1.83</b>	<b>668.5</b>

Reported at a 0.3g/t cut-off grade and constrained within a US\$2,000/oz optimised pit shell utilising mining parameters and costs typical for operators within the West Mali region.

Following release of the MRE, the Company commenced technical studies to develop a base case development scenario. Ongoing studies are anticipated as further mineralisation is defined at depth and along strike, and at other targets within the Dandoko gold corridor and Kouroufing, Kandiole and Sari Projects. Accordingly, the current MRE provides a central foundation for continued resource growth.

The Dandoko resource growth drilling program is targeting numerous zones immediately outside of the resource pit shells, particularly at SK1 South (Figure 4) and the identification of additional high-grade starter pit opportunities similar to SK1 North and SK2 along the 15km Dandoko gold corridor. With over 65% of the Seko resource hosted within the oxide zone, the potential for a large-scale open pit mining development with a simple gold processing flowsheet is being assessed as part of the initial technical studies.

**Figure 4: Growth opportunities outside of the SK1-3 pit shells, which contains 91% of the MRE gold inventory.**

Table 2: Summary of significant intersections

AREA	HOLE No.	FROM (m)	TO (m)	WIDTH (m)	GOLD (g/t)
DISSE	ACDS21-1052	3	6	3	1.78
	RCDS21-311	128	132	No recovery—mafic dyke	
	RCDS21-312	43	46	3	0.77
		61	72	No recovery—mine workings	
		72	78	6	13.05*
		72	74	2	32.55
		72	73	1	39.90
	RCDS21-313	84	87	3	6.02
		85	86	1	16.30
	RCDS21-314	61	54	No recovery—mine workings	
	RDDS21-118	17	18	1	1.57
		24	29	5	0.53
		101	104	3	11.00
		101	102	1	26.00
		123	125	2	1.01

Intervals are reported using a threshold where the interval has a 0.3g/t Au average or greater over the sample interval and selects all material greater than 0.10g/t Au allowing for up to three samples of included dilution every 10m. Sampling completed as 3m composites and 1m samples for AC drilling. \* Denotes hole ended in mineralisation

## ABOUT OKLO RESOURCES

Oklo Resources is an ASX listed gold exploration company with a total landholding of 1,405km<sup>2</sup> covering highly prospective greenstone belts in Mali, West Africa. The Company's current focus is on its West Mali landholding (~505km<sup>2</sup>), and in particular its flagship Dandoko Project located east of the prolific Senegal-Mali Shear Zone and in close proximity to numerous world-class gold operations. In March 2021, the Company delivered an initial Measured, Indicated and Inferred JORC 2012 compliant resource of 11.3Mt at 1.83g/t gold for 668.5kOz contained gold encompassing the Seko, Koko, Disse and Diabarou deposits, which all remain open and are expected to grow with ongoing drilling either along strike or at depth.

The Company has a corporate office located in Sydney, Australia and an expert technical team based in Bamako, Mali, led by Dr Madani Diallo who has previously been involved in several significant discoveries totalling circa 30Moz gold.

Location of Oklo Projects in West Mali

**Competent Person's Declaration**

The information in this announcement that relates to Exploration Results is based on information compiled by geologists employed by Africa Mining (a wholly owned subsidiary of Oklo Resources) and reviewed by Mr Andrew Boyd, who is a member of the Australian Institute of Geoscientists. Mr Boyd, who is employed by Cairn Consulting Limited, is on a retainer to fulfil the role of the General Manager – Exploration of Oklo Resources Limited and holds securities in the Company. Mr Boyd is considered to have sufficient experience deemed relevant to the style of mineralisation and type of deposit under consideration, and to the activity that he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" (the 2012 JORC Code). Mr Boyd consents to the inclusion in this report of the matters based on this information in the form and context in which it appears.

**Compliance Information**

This report contains information relating to a Mineral Resource extracted from the Company's ASX market announcement dated 30 March 2021 'Oklo Delivers Robust Initial Mineral Resource Estimate for Dandoko', containing the competent person consent of Mr Malcolm Titley, an employee of the independent consulting company Maja Mining Limited, reported previously in accordance with the JORC Code (2012) and available for viewing at [www.okloresources.com](http://www.okloresources.com). Oklo Resources confirms that it is not aware of any new information or data that materially affects the information included in the original ASX market announcement and that all material assumptions and technical parameters underpinning the estimates in the original market announcement continue to apply and have not materially changed.

This report contains information extracted from previous ASX market announcements reported in accordance with the JORC Code (2012) and available for viewing at [www.okloresources.com](http://www.okloresources.com). Oklo Resources confirms that in respect of these announcements it is not aware of any new information or data that materially affects the information included in any original ASX market announcement. The announcements are as follows:

## JORC CODE, 2012 EDITION – TABLE 1

### Section 1 Sampling Techniques and Data

CRITERIA	JORC CODE EXPLANATION	COMMENTARY
<b>Sampling techniques</b>	<ul style="list-style-type: none"> <li>▶ Nature and quality of sampling, measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</li> <li>▶ Aspects of the determination of mineralisation that are Material to the Public Report.</li> <li>▶ In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</li> </ul>	<ul style="list-style-type: none"> <li>▶ All holes have been routinely sampled on a 1m interval for gold</li> <li>▶ 1 metre samples are preserved for future assay as required.</li> <li>▶ AC samples were submitted as 3m composites for assay.</li> <li>▶ AC and RC Samples were collected in situ at the drill site and are split collecting 2 to 3 kg per sample. Certified reference material and sample duplicates were inserted at regular intervals.</li> <li>▶ DD samples are cut to half core on 1m intervals.</li> <li>▶ All samples were submitted SGS, Bamako Mali using a 50g Fire Assay gold analysis with a 10ppb Au detection level.</li> </ul>
<b>Drilling techniques</b>	<ul style="list-style-type: none"> <li>▶ Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face&lt;sampling bit or other type, whether core is oriented and if so, by what method, etc).</li> </ul>	<ul style="list-style-type: none"> <li>▶ AC and RC drilling was carried out by AMS drilling</li> <li>▶ DD drilling was undertaken by AMS drilling and utilised HQ triple tube drilling</li> </ul>
<b>Drill sample recovery</b>	<ul style="list-style-type: none"> <li>▶ Method of recording and assessing core and chip sample recoveries and results assessed.</li> <li>▶ Measures taken to maximise sample recovery and ensure representative nature of the samples.</li> <li>▶ Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</li> </ul>	<ul style="list-style-type: none"> <li>▶ An initial visual estimate of AC/RC sample recovery was undertaken at the drill rig for each sample metre collected.</li> <li>▶ Collected samples were weighed to ensure consistency of sample size and monitor sample recoveries.</li> <li>▶ For DD core recovery and RQD observations are made.</li> <li>▶ No systematic sampling issue, recovery issue or bias was picked up and it is therefore considered that both sample recovery and quality is adequate for the drilling technique employed</li> </ul>
<b>Logging</b>	<ul style="list-style-type: none"> <li>▶ Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</li> <li>▶ Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</li> <li>▶ The total length and percentage of the relevant intersections logged.</li> </ul>	<ul style="list-style-type: none"> <li>▶ All drill samples were geologically logged by Oklo Resources subsidiary Africa Mining geologists.</li> <li>▶ Geological logging used a standardised logging system.</li> </ul>
<b>Sub-sampling techniques and sample preparation</b>	<ul style="list-style-type: none"> <li>▶ If core, whether cut or sawn and whether quarter, half or all core taken.</li> <li>▶ If non&lt;core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</li> <li>▶ For all sample types, the nature, quality and appropriateness of the sample preparation technique.</li> <li>▶ Quality control procedures adopted for all sub&lt;sampling stages to maximise representivity of samples.</li> <li>▶ Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second&lt;half sampling.</li> <li>▶ Whether sample sizes are appropriate to the grain size of the material being sampled.</li> </ul>	<ul style="list-style-type: none"> <li>▶ AC/RC samples were split utilizing a 3 tier riffle splitter with a 1m sample being taken.</li> <li>▶ Duplicates were taken to evaluate representativeness</li> <li>▶ Further sample preparation was undertaken at the SGS laboratories by SGS laboratory staff</li> <li>▶ All DD core was ½ cut and ¼ cut when a duplicate sample was taken.</li> <li>▶ Duplicates were taken to evaluate representativeness</li> <li>▶ At the laboratory, samples were weighed, dried and fine crushed to 70% &lt;2mm (jaw crusher), pulverized and split to 85 %&lt; 75 um. Gold is assayed by fire assay (50g charge) with an AAS Finish.</li> <li>▶ Sample pulps were returned from the SGS laboratory under secure "chain of custody" procedure by Africa Mining staff and are being stored in a secure location for possible future analysis.</li> </ul>

CRITERIA	JORC CODE EXPLANATION	COMMENTARY
		<ul style="list-style-type: none"> <li>Sample sizes and laboratory preparation techniques are considered to be appropriate for this early stage exploration and the commodity being targeted.</li> </ul>
<b>Quality of assay data and laboratory tests</b>	<ul style="list-style-type: none"> <li>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</li> <li>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</li> <li>Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</li> </ul>	<ul style="list-style-type: none"> <li>Analysis for gold on AC, RC and diamond samples is undertaken at SGS Bamako by 50g Fire Assay with an AAS finish to a lower detection limit of 10ppb Au.</li> <li>Fire assay is considered a "total" assay technique.</li> <li>No field non assay analysis instruments were used in the analyses reported.</li> <li>A review of certified reference material and sample blanks inserted by the Company indicated no significant analytical bias or preparation errors in the reported analyses.</li> <li>Results of analyses for field sample duplicates are consistent with the style of mineralisation evaluated and considered to be representative of the geological zones which were sampled.</li> <li>Internal laboratory QAQC checks are reported by the laboratory and a review of the QAQC reports suggests the laboratory is performing within acceptable limits.</li> </ul>
<b>Verification of sampling and assaying</b>	<ul style="list-style-type: none"> <li>The verification of significant intersections by either independent or alternative company personnel.</li> <li>The use of twinned holes.</li> <li>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</li> <li>Discuss any adjustment to assay data.</li> </ul>	<ul style="list-style-type: none"> <li>All drill hole data is paper logged at the drill site and then digitally entered by Company geologists at the site office.</li> <li>All digital data is verified and validated by the Company's database consultant in Paris before loading into the drill hole database.</li> <li>No twinning of holes was undertaken in this program.</li> <li>Reported drill results were compiled by the company's geologists, verified by the Company's database administrator and exploration manager.</li> <li>No adjustments to assay data were made.</li> </ul>
<b>Location of data points</b>	<ul style="list-style-type: none"> <li>Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</li> <li>Specification of the grid system used.</li> <li>Quality and adequacy of topographic control.</li> </ul>	<ul style="list-style-type: none"> <li>AC, RC and diamond drill hole collars are positioned using differential GPS (DGPS).</li> <li>Accuracy of the DGPS &lt; +/- 0.1m and is considered appropriate for this level of exploration</li> <li>The grid system is UTM Zone 29N</li> </ul>
<b>Data spacing and distribution</b>	<ul style="list-style-type: none"> <li>Data spacing for reporting of Exploration Results.</li> <li>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</li> <li>Whether sample compositing has been applied.</li> </ul>	<ul style="list-style-type: none"> <li>RC and DD drilling is now being undertaken on a ~20x40m spacing as infill undertaken in areas of identified higher grade zones.</li> <li>Drilling reported in this program is being designed to infill or extend known mineralisation to a sufficient density of drilling to enable the estimation of a maiden resource.</li> </ul>
<b>Orientation of data in relation to geological structure</b>	<ul style="list-style-type: none"> <li>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</li> <li>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</li> </ul>	<ul style="list-style-type: none"> <li>Exploration is at an early stage and, as such, knowledge on exact location of mineralisation and its relation to lithological and structural boundaries is not accurately known. However, the current hole orientation is considered appropriate for the program to reasonably assess the prospectivity of known structures interpreted from other data sources.</li> </ul>
<b>Sample security</b>	<ul style="list-style-type: none"> <li>The measures taken to ensure sample security.</li> </ul>	<ul style="list-style-type: none"> <li>RC and diamond samples were collected from the company camp by SGS and taken to the SGS laboratory in Bamako under secure "chain of custody" procedure by Africa Mining staff.</li> <li>Sample pulps were returned from the SGS laboratory under secure "chain of custody"</li> </ul>

CRITERIA	JORC CODE EXPLANATION	COMMENTARY
		<p>procedure by Africa Mining staff and have been stored in a secure location.</p> <p>► The AC samples remaining after splitting are removed from the site and trucked to the exploration camp where they are stored under security for future reference for a minimum of 6 months</p>
<b>Audits or reviews</b>	<p>► The results of any audits or reviews of sampling techniques and data.</p>	<p>► There have been no external audit or review of the Company's sampling techniques or data at this early exploration stage.</p>

## Section 2 Reporting of Exploration Results

CRITERIA	JORC CODE EXPLANATION	CRITERIA
<b>Mineral tenement and land tenure status</b>	<p>► Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</p> <p>► The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</p>	<p>► The results reported in this report are all contained within the Dandoko Exploration Permit, Gombaly Exploration Permit which are held 100% by Africa Mining SARL, a wholly owned subsidiary of Oklo Resources Limited.</p> <p>► The Dandoko permit (100km<sup>2</sup>) which was renewed on the 10/8/17, for a period of 3 years and renewable twice, each for a period of 2 years:</p> <p>► The Gombaly permit (34km<sup>2</sup>) which was granted on the 10/8/17, for a period of 3 years and renewable twice, each for a period of 2 years</p>
<b>Exploration done by other parties</b>	<p>► Acknowledgment and appraisal of exploration by other parties.</p>	<p>► The area that is presently covered by the Dandoko permit was explored intermittently by Compass Gold Corporation between 2010 and 2013.</p> <p>► Exploration consisted of aeromagnetic surveys, gridding, soil sampling and minor reconnaissance (RC) drilling.</p> <p>► Exploration consisted of aeromagnetic surveys, gridding, soil sampling.</p> <p>► Ashanti Mali undertook reconnaissance soil sampling surveys over part of the license area.</p>
<b>Geology</b>	<p>► Deposit type, geological setting and style of mineralisation.</p>	<p>► The deposit style targeted for exploration is orogenic lode gold.</p> <p>► This style of mineralisation can occur as veins or disseminations in altered (often silicified) host rock or as pervasive alteration over a broad zone.</p> <p>► Deposit are often found in close proximity to linear geological structures (faults &amp; shears) often associated with deep-seated structures.</p> <p>► Lateritic weathering is common within the project area. The depth to fresh rock is variable and may extend up to 50-70m below surface and in this drill program weathering of &gt;150m was encountered</p>
<b>Drill hole Information</b>	<p>► A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</p> <ul style="list-style-type: none"> <li>○ easting and northing of the drill hole collar</li> <li>○ elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</li> <li>○ dip and azimuth of the hole</li> <li>○ down hole length and interception depth</li> <li>○ hole length.</li> </ul> <p>► If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding</p>	<p>► Locations are tabulated within the report and are how on plans and sections within the main body of this announcement.</p> <p>► Dip of lithologies and/or mineralisation are not currently known. Drilling was oriented based on dips of lithologies observed ~5km to the north of the prospect and may not reflect the actual dip.</p>

CRITERIA	JORC CODE EXPLANATION	CRITERIA
	of the report, the Competent Person should clearly explain why this is the case.	
<b>Data aggregation methods</b>	<ul style="list-style-type: none"> <li>▶ In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</li> <li>▶ Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</li> <li>▶ The assumptions used for any reporting of metal equivalent values should be clearly stated.</li> </ul>	<ul style="list-style-type: none"> <li>▶ Intervals are reported using a threshold where the interval has a 0.3 g/t Au average or greater over the sample interval and selects all material greater than 0.10 g/t Au allowing for up to 2 samples of included dilution every 10m.</li> <li>▶ No grade top cut off has been applied to full results presented in Significant Intersection Table.</li> <li>▶ No metal equivalent reporting is used or applied</li> </ul>
<b>Relationship between mineralisation widths and intercept lengths</b>	<ul style="list-style-type: none"> <li>▶ These relationships are particularly important in the reporting of Exploration Results.</li> <li>▶ If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</li> <li>▶ If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').</li> </ul>	<ul style="list-style-type: none"> <li>▶ The results reported in this announcement are considered to be of an early stage in the exploration of the project.</li> <li>▶ Mineralisation geometry is not accurately known as the exact orientation and extent of known mineralised structures are not yet determined.</li> <li>▶ Mineralisation results are reported as "downhole" widths as true widths are not yet known</li> </ul>
<b>Diagrams</b>	<ul style="list-style-type: none"> <li>▶ Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</li> </ul>	<ul style="list-style-type: none"> <li>▶ Drill hole location plans are provided in earlier releases with new holes tabulated within this release.</li> </ul>
<b>Balanced reporting</b>	<ul style="list-style-type: none"> <li>▶ Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</li> </ul>	<ul style="list-style-type: none"> <li>▶ Drill hole locations are provided in earlier reports.</li> <li>▶ All assays received of <math>\geq 0.1</math> ppm have been reported.</li> <li>▶ No high cuts to reported data have been made.</li> </ul>
<b>Other substantive exploration data</b>	<ul style="list-style-type: none"> <li>▶ Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</li> </ul>	<ul style="list-style-type: none"> <li>▶ No other exploration data that is considered meaningful and material has been omitted from this report</li> </ul>
<b>Further work</b>	<ul style="list-style-type: none"> <li>▶ The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</li> <li>▶ Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</li> </ul>	<ul style="list-style-type: none"> <li>▶ AC, RC and diamond drilling is ongoing on the Company's Dandoko prospect with a view to growing the resource estimate.</li> </ul>
