HIGHLIGHTS

Abujar Gold Mine Development:

Definitive Feasibility Study (DFS) for Abujar Gold Project 4Mtpa open pit demonstrates:

- Increased gold production from Abujar compared to Pre-Feasibility Study (PFS)
 - 260,000oz gold forecast in first year of production (30% increase over the PFS) at an AISC of US\$651/oz
 - 1.2Moz of gold production forecast over first six years for 200,000oz per annum
 (20% increase over the PFS) at an average AISC of US\$804/oz
 - Updated Open Pit Probable Ore Reserves increase to 34.4Mt at 1.3 g/t Au for 1.45Moz using US\$1,407/oz (68% increase over PFS and 78% of Indicated Mineral Resources)
 - Life of Mine (LOM) mining inventory inclusive of Ore Reserves of 44.9Mt at 1.2 g/t
 Au for 1.7Moz gold recovered (54% increase over PFS) for a strip ratio of 6:1 w:o¹.
- Strong LOM financial results (in US Dollars) demonstrated across a full suite of gold prices²
 - Life of mine (LOM) revenue US\$2.87B
 - o LOM pre-tax free cashflow of US\$1.28B (post-tax US\$0.97B); EBITDA of US\$1.52B
 - 11-year project life and payback period post-tax of less than 1 year from first production
 - Pre-tax NPV_{5%} of U\$\$959M (A\$1.3B), post-tax NPV_{5%} of U\$\$722M (A\$0.97B)³
 - o IRR (pre-tax) 115% and IRR (post-tax) 95%
 - Average AISC of US\$832/oz LOM
 - Pre-production capital requirement of US\$200M including contingencies (down 13% on PFS)
- ➤ Robust DFS economics (demonstrated for a range of gold prices starting at US1,200/oz) support substantial debt funding opportunity for Abujar
- ➤ All mining and environmental approvals for Abujar in place; Mining Convention expected to be ratified in Q4 CY21

¹ The LOM plan is based on a Probable Ore Reserve of 34.4Mt at 1.3 g/t Au for 1.45Moz (82% gold production of the LOM Plan). The remaining 18% of gold production in the LOM plan are from Inferred Mineral Resources. There is a low level of geological confidence associated with Inferred Mineral Resources and there is no certainty that further exploration work will result in the determination of Indicated Mineral Resources or that the production target itself will be realised.

² LOM Financials reported here using US\$1,700/oz which is b below current spot gold price. Project LOM valuations are presented in this report at a range of gold prices from US\$1,200/oz to US\$1,800.

1. ABUJAR GOLD MINE DEVELOPMENT

During the Quarter the Company made excellent progress on development of its Abujar Gold Mine in Côte d'Ivoire, West Africa, which is on track to be West Africa's next gold mine.

Definitive Feasibility Study (DFS) delivers robust production and economic results

Underpinned by Ore Reserves of 1.45Moz, the DFS demonstrates Abujar can deliver annual average gold production of more than 200,000 ounces of gold per annum over the first six years of production. With its own fleet of drill rigs, Tietto has grown the Abujar Mineral Resource to 3.35Moz gold and expects to further build on this as it drill tests 20 regional prospects within 10km trucking distance to the planned Abujar mill.

Tietto believes it can add materially to the Abujar DFS gold production profile and it has engaged consultancy Entech to review an AG underground scoping study using pit limits defined in the DFS. A program of metallurgical testwork is underway on samples from APG to assess its suitability to provide feed for a heap leach. These two programs have potential to deliver further value from Abujar.

Tietto will examine potential for the Abujar mill throughput to increase above DFS levels once the plant is operational, as demonstrated by other West African gold projects.

- Stage 1 land acquisition for 190 ha areas for processing plant, mine camp and mine access road was completed.

2. EXPLORATION

During the September Quarter the Company reported further high-grade gold results from infill drilling at the Abujar-Gludehi (AG) Deposit at Abujar. Drilling aims to convert a portion of Indicated resources (35Mt @ 1.5 g/t Au for 1.65Moz) to Measured, targeting the first two years of Abujar's gold production.

Tietto reported first assay results received from 24 holes for 3,843m from a 30,000m infill diamond drill program on 10 September, with results including:

- 3m @ 35.65 g/t Au from 85m incl. 1m @ 98.03g/t Au (ZDD596 Section 28A)

3. NEXT STEPS

Tietto had \$32.8 million cash at the end of September 2021 and remains very well positioned to advance its dual strategy in 2021:

- 1) Continue to drive rapid resource growth at the 3.35Moz Abujar Gold Project; and
- 2) Fast-track development of the Abujar Gold Project.

Aggressively exploring at Abujar to drive rapid resource growth:

- Targeting 100,000m of diamond drilling in 2021 using our six company-owned DD rigs drilling at US\$35/m;
- Drill testing 8.5km of fertile Abujar main shear along strike from the existing AG and APG deposits; and
- Drill testing high priority regional targets.

Fast tracking development of the Abujar Gold Project:

Tietto continues to deliver milestones during 2021 and recently released (5 October 2021) key findings from a Definitive Feasibility Study (DFS) that demonstrated robust financial results and estimated gold production of 260,000oz in the first year and 200,000oz per year over the first six years of Abujar's 11-year mine life.

Tietto has secured a SAG mill for the project and Engineering Design of the Abujar Gold Mine Processing Plant is being undertaken by Primero Group, a Perth-based specialist mine design company.

The Company is negotiating the Abujar Mining Convention with the Ivorian Government, being the final regulatory step for the Company to achieve, with all mining and environmental approval already secured.

Tietto's owner's team is focused on value enhancement areas identified by the DFS, and are implementing plans for the commencement of long-lead activities to ensure an expedited route to gold production at Abujar.
