Platinum Investment Management Limited ABN 25 063 565 006 AFSL 221935, trading as Platinum Asset Management ("Platinum") is the investment manager of Platinum Capital Limited ("PMC"). This information is general in nature and does not take into account your specific needs or circumstances. You should consider your own financial position, objectives and requirements and seek professional financial advice before making any financial decisions. Numerical figures have been subject to rounding. Neither PMC nor Platinum, guarantee the performance of PMC, the repayment of capital or the payment of income. The market commentary reflects Platinum's views and beliefs at the time of preparation, which are subject to change without notice. No representations or warranties are made by PMC or Platinum as to their accuracy or reliability. To the extent permitted by law, no liability is accepted by PMC or Platinum for any loss or damage as a result of any reliance on this information.

1. Source: Platinum. The pre-tax NTA was calculated in accordance with Australian Accounting Standards, based on the fair value of all investments. The post-tax NTA is the pre-tax NTA after provision for tax on both realised and unrealised income and gains. The NTA is unaudited.

2. Source: Platinum for portfolio returns and Factset Research Systems for MSCI returns. The returns are calculated relative to the MSCI All Country World Net Index in A\$ (except the gross MSCI index was used prior to 31/12/96). Past performance is not a reliable indicator of future returns. Platinum does not invest by reference to the weightings of the index. The index is provided as a reference only.

3. Shows dividends determined in respect of the relevant financial year. This information is historical. No guarantee is given about future dividends or the level of franking of such dividends.

4. The "Long %" is the exposure to long securities and long securities/index derivative positions, the "Short %" is the exposure to short securities and short securities/index derivative positions and the "Net %" is the total of the "Long %" and "Short %", each as a percentage of PMC's portfolio value. The "CCY %" is the effective currency exposure of PMC's portfolio as a percentage of its portfolio value, taking into account long and short securities, cash, forwards and long and short securities/index derivative positions. For the "Industry breakdown", index positions (whether through ETFs or derivatives) are only included under the relevant sector if they are sector specific, otherwise they are included under "Other".

4. and 5. Country classifications for securities reflect Bloomberg's "country of risk" designations, and currency classifications for securities reflect the relevant local currencies of the country classifications.

5. The "Top ten positions" show PMC's top ten long securities positions as a percentage of PMC's portfolio value (including long securities and long securities derivative positions).

All data where MSCI is referenced is the property of MSCI Limited ("MSCI"). No use or distribution of this data is permitted without the written consent of MSCI. This data is provided "as is" without any warranties by MSCI. MSCI assumes no liability for or in connection with this data. Please see full MSCI disclaimer in <https://www.platinum.com.au/Special-Pages/Terms-Conditions>

MARKET UPDATE AND COMMENTARY

- The portfolio returned -4.4% for August 2024.
- The portfolio increased its short book early in August and ended the month with shorts of 12.4% and a net invested position of 75.4%. The short book includes single stock shorts as well as a short position on the Russell 2000 index.

Performance Analysis*

The majority of the deduction in performance came from the portfolio's long book, detracting -3.7% over the month. The portfolio significantly increased its short book over August but this too detracted -0.4%.

August saw significant volatility in equity markets. In July, the US market worried that inflation would remain sticky and feared the Fed wouldn't cut rates as quickly as expected. Another weak CPI print was enough for the market to embrace the "inflation is dead" narrative and we saw a rotation towards small and mid-caps with the Russell 2000 up 13% in July.

Then on the 2nd August we had a confluence of events that awakened fears that "growth is also dead".

- **The Bank of Japan (BOJ)** raised interest rates from 0.1% to 0.25% - their highest point in 15 years. The BOJ also failed to rule out another hike this year and stressed its readiness to keep raising borrowing costs to levels deemed neutral to the economy. This jolted the Yen. It also saw investors reassess their carry trades (where they borrow in a currency where interest rates are low and then swap them for a currency where they can invest in higher-yielding assets).
- **Weak ISM Manufacturing index** (also known as the Purchasing Managers' Index). The July ISM Index was below expectations and at its lowest since November. This is a monthly survey of manufacturing purchasing managers. It is considered a key indicator of the state of the US economy.

Markets were also influenced by a soft non-farm payrolls (NFP) number in July, by a downward revision to the June NFP print and by unemployment rising to 4.25%. August also saw the tripping of the so-called Sahm rule. It compares the difference between the current three month moving average of the unemployment rate and its minimum three month moving average in the prior twelve months. If the difference is above 50bps, it signals a recession. It was at 53bps.

Rate cuts coming?

In response to these signals, the S&P500 was off ~6% and Nikkei 225 down ~14% in the first week of August. However, the losses in equity markets had reversed by month end on increased optimism about rate cuts.

We believe the Fed will cut rates because the economy has slowed considerably. A slowing economy should negatively affect companies' earnings. This generally does not bode well for share prices.

During periods of significant market distress, the portfolio's history shows us that the unloved part of the market is typically sold first – after all, they're already disliked. This means that in the early stages of a market drawdown, the portfolio tends to perform in-line or worse than the market. However, while these unloved stocks tend to find a price floor first, it is the more popular and over-valued stocks that have greater share price falls over the longer term. It is through our ability to pick mispriced stocks and short the next stages of the drawdown that the portfolio typically protects clients' capital. This is what we're seeking to do now.

An attractively valued portfolio

The portfolio's aggregate valuation metrics are attractive in both an absolute sense and relative to the market, with a ~66% higher earnings yield and a ~48% discount on a price to book basis (see table below).

Metric	Platinum Capital Limited	MSCI AC World Net Index (A\$)
NTM Earnings Yield	9.3% (Price-to-Earnings ratio of 10.7x)	5.6% (Price-to-Earnings ratio of 17.8x)
NTM Dividend Yield	2.6%	2.3%
NTM Enterprise Value-to-Sales	1.7x	2.5x
LTM Price-to-Book Ratio	1.5x	2.9x

The valuations in the table have been calculated by Platinum and for the portfolio refer to the long portion of the portfolio, exclude negative net earnings and use FactSet consensus earnings. MSCI data is sourced from Rimes, FactSet and Platinum. As at 31 August 2024. NTM = next twelve months. LTM = last twelve months.

*Source: Platinum. Contribution numbers are based on the total return of individual positions (in AUD) and are gross as they do not take into account the portfolio's fees and costs (other than brokerage). **Past performance is not a reliable indicator of future returns.**
