ASX Release

31 July 2026

JUNE 2026 QUARTERLY ACTIVITIES REPORT

Highlights

- **High-resolution ground magnetic survey completed at the Wadi Salamah Project (98.7km2) in Saudi Arabia:**
  - **Two massive, deep-seated magnetic anomalies identified in the northern sector, covering approximately ~16km^2.**
  - **Anomalies interpreted as large-scale intrusive bodies prospective for Porphyry Copper-Molybdenum (Cu-Mo) mineralisation.**
  - **Six major regional fault structures identified, associated with the prolific Najd Fault System corridor.**
  - **Three priority target zones defined for follow-up exploration and drilling.**

- **This followed previous quarter ground magnetic survey results for Shaib Marqan which identified the following:**
  - **Magnetics define multiple structural corridors and fault-controlled targets prospective for gold mineralisation. Seven major fault systems identified.**
  - **Strong spatial correlation between magnetic anomalies and previously reported high-grade surface sample assay results of up to 40.35 g/t Au.**
  - **Four priority target zones defined for follow-up exploration and drilling.**

- **Geological mapping and rock chip sampling programs underway at defined targets for both Wadi Salamah and Shaib Marqan followed by planned first phase 5,000 metre drill programs at each in Q3 2026.**

- **Tanzanian drilling program underway to verify defined targets at the Mpanda project with a 2nd phase drill program anticipated in Q3 2026.**

- **Strongly supported share Placement raised $3.5 million from existing shareholders and new sophisticated investors to fund the above activities.**

Resource Minerals International Ltd (**ASX: RMI**) ("**RMI"** or "**the Company"**) is a Perth-based mineral exploration company focussed on the exploration and development of critical and precious mineral deposits in Tanzania, Saudi Arabia and Finland. The Company provides its activities and cash flow summary for the quarter ended 30 June 2026.

For personal use only

For personal use only

Saudi Arabia

Wadi Salamah and Shaib Marqan Projects

Both projects are granted Exploration Licences ("EL") located in central Saudi Arabia. Shaib Marqan is situated around 240km south-west of Riyadh and easily accessible via sealed roads and minor unsealed roads. The EL area is 91.8km^2. Wadi Salamah is located approximately 320 kilometres west-south-west of Riyadh, and 150 kilometres west of the Shaib Marqan project. The EL area is 98.7 km^2.

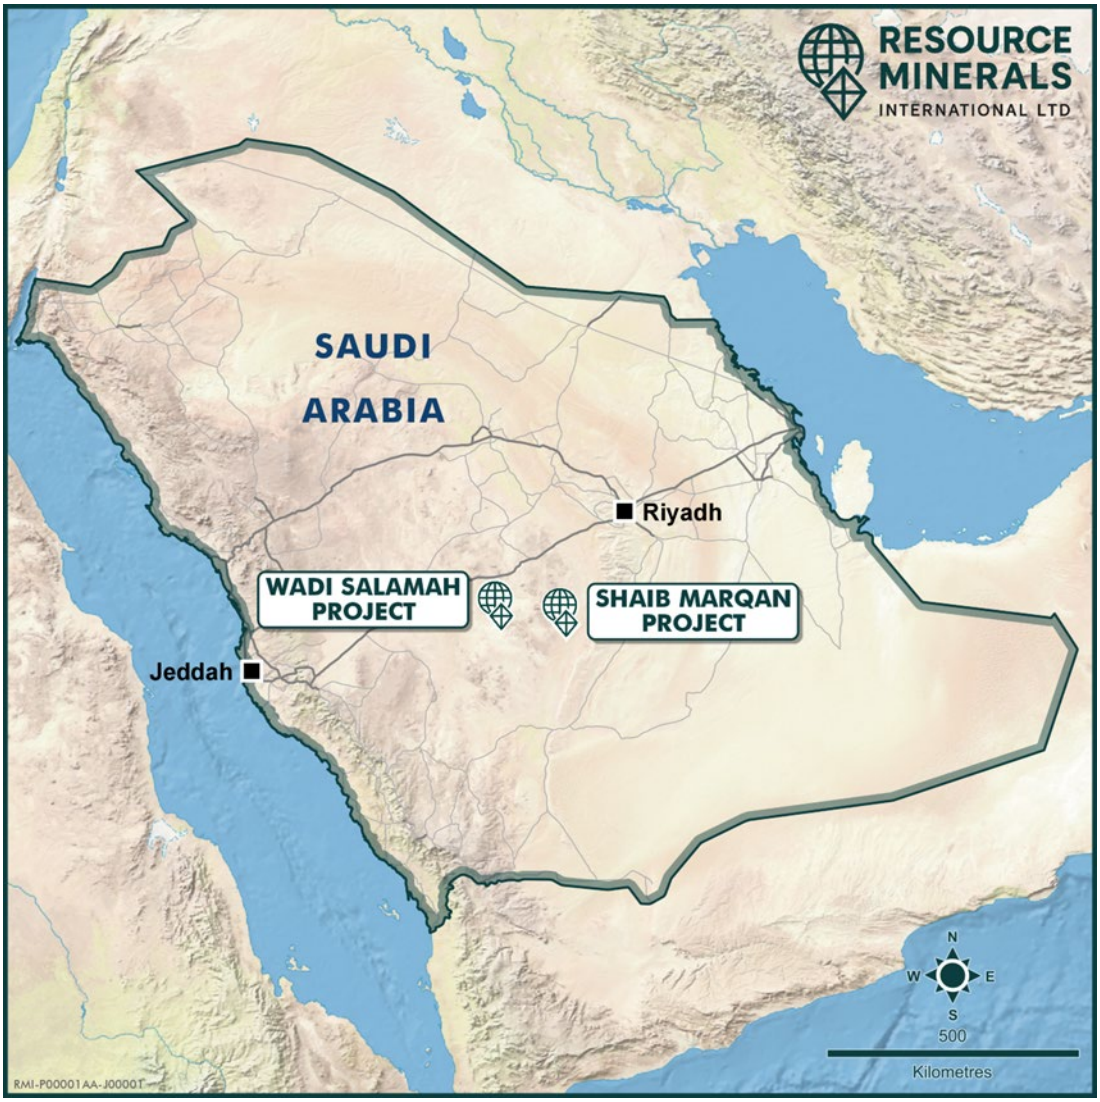

Figure 1: Projects Location Map

Wadi Salamah

In April 2026 the Company completed the data processing, analysis and interpretation work following the completion of the 1,010 line-km high-resolution ground magnetic survey over the Wadi Salamah project.

For personal use only

Wadi Salamah is located within the Arabian Shield. This region remains largely untested by modern systematic exploration. The survey represents the first phase of systematic work at the project and provides a critical dataset for defining structural controls and priority drill targets.

The Wadi Salamah Project is situated in the southwest corner of Riyadh Province, central Saudi Arabia, approximately 325 km southwest of Riyadh City and about 30 km south of the central Al Khasrah Town.

The project occurs within the Murdama group rocks of the Zaydi formation, that have been folded and intruded by hypabyssal and plutonic rocks ranging from microgranite to gabbro. Historic mineralisation has been identified in shear hosted auriferous veins and stockworks often with a silver association and mined in ancient small artisanal scale mines (see Figure 2).

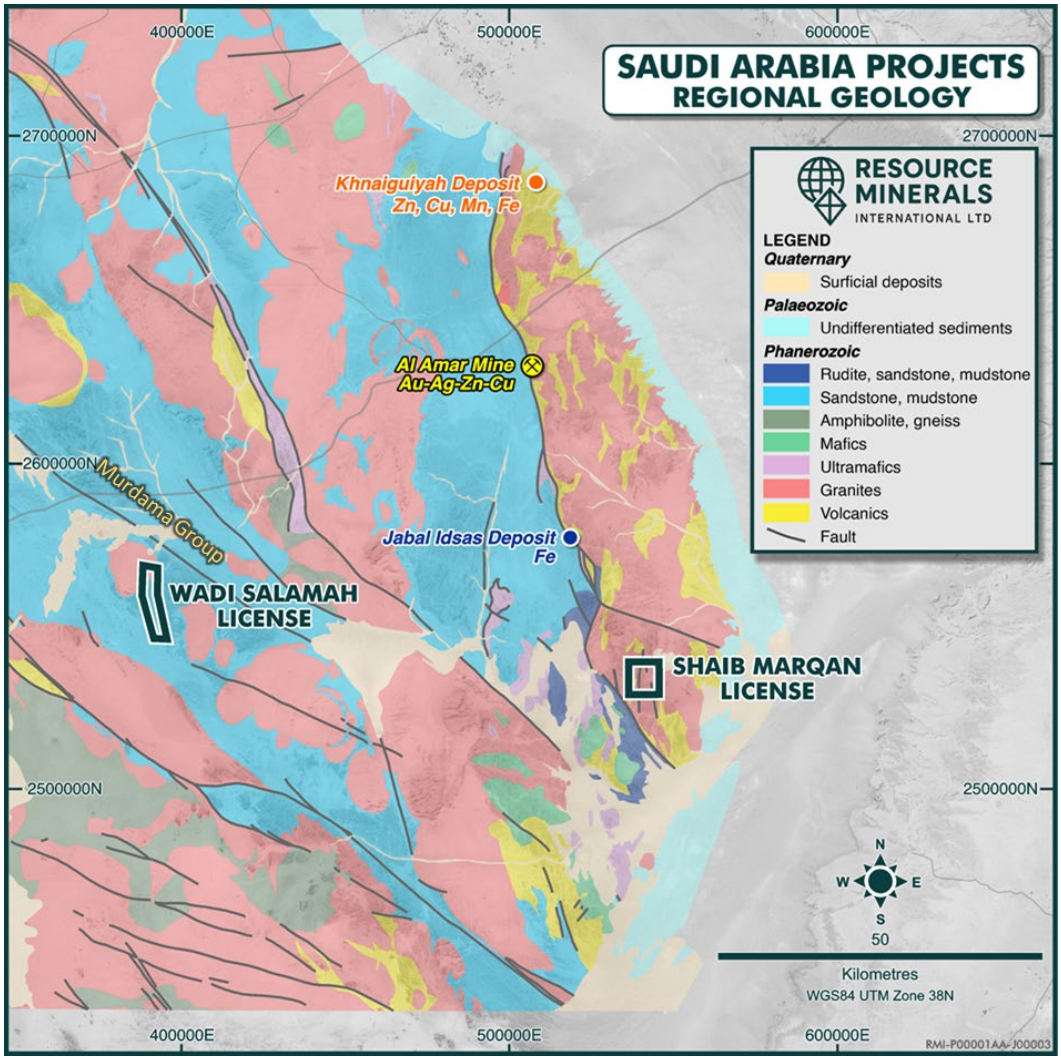

Figure 2. 1:1 million scale regional geology Shaib Marqan and Wadi Salamah license areas

For personal use only

High-Resolution Ground Magnetic Survey

The primary objective of the geophysical survey was to expand beyond known surface mineralisation and identify the key structural controls to identify "blind" targets beneath the surface cover. Magnetic surveying at Wadi Salamah was completed in collaboration with CNNC Geological Science and Technology Co. Ltd. Data was collected from E-W oriented lines, approximately perpendicular to the structural strike using a GSM-19W Overhauser magnetometer.

A total of 225 survey lines were laid out, with a cumulative length of 1,010 km. The survey was conducted using a line spacing of 100 m and a point spacing of 20 m, achieving full coverage of the work area. Results were contoured as total magnetic field, first vertical derivative, and second vertical derivative map products.

Structural Architecture

Based on the RTP magnetic anomaly map (Table 1 and Figure 5) and the first- and second-order vertical derivative maps a total of six relatively distinct fault structures were identified from the magnetic survey across the work area.

Among these, three structures (F1, F2, and F4) exhibit prominent characteristics and are likely to be of considerable scale, while Faults F5 and F2 show good correspondence with known geological information. The inferred structural locations consistently correspond to zones of pronounced high-to-low gradient transitions on the vertical derivative maps, and the derivative calculations also aided in delineating structural boundaries and highlighting shallow fault-related features.

Table 1: Main Structures in Wadi Salamah (based on magnetic survey results)

Fault ID	Strike Direction	Basis for Division
F1	NW-SE	Strip-shaped low anomaly
F2	NW-SE	Magnetic anomaly gradient zone with a clear direction and a certain length and a relatively high amplitude
F3	NE-SW	Magnetic anomaly gradient zone with a clear direction and length
F4	N-S, NE-SW	Magnetic anomaly gradient zone with a clear direction
F5	NWW-SEE	Magnetic anomaly gradient zone
F6	NW-SE	Continuous high-value magnetic anomaly, needs to be confirmed on-site

For personal use only

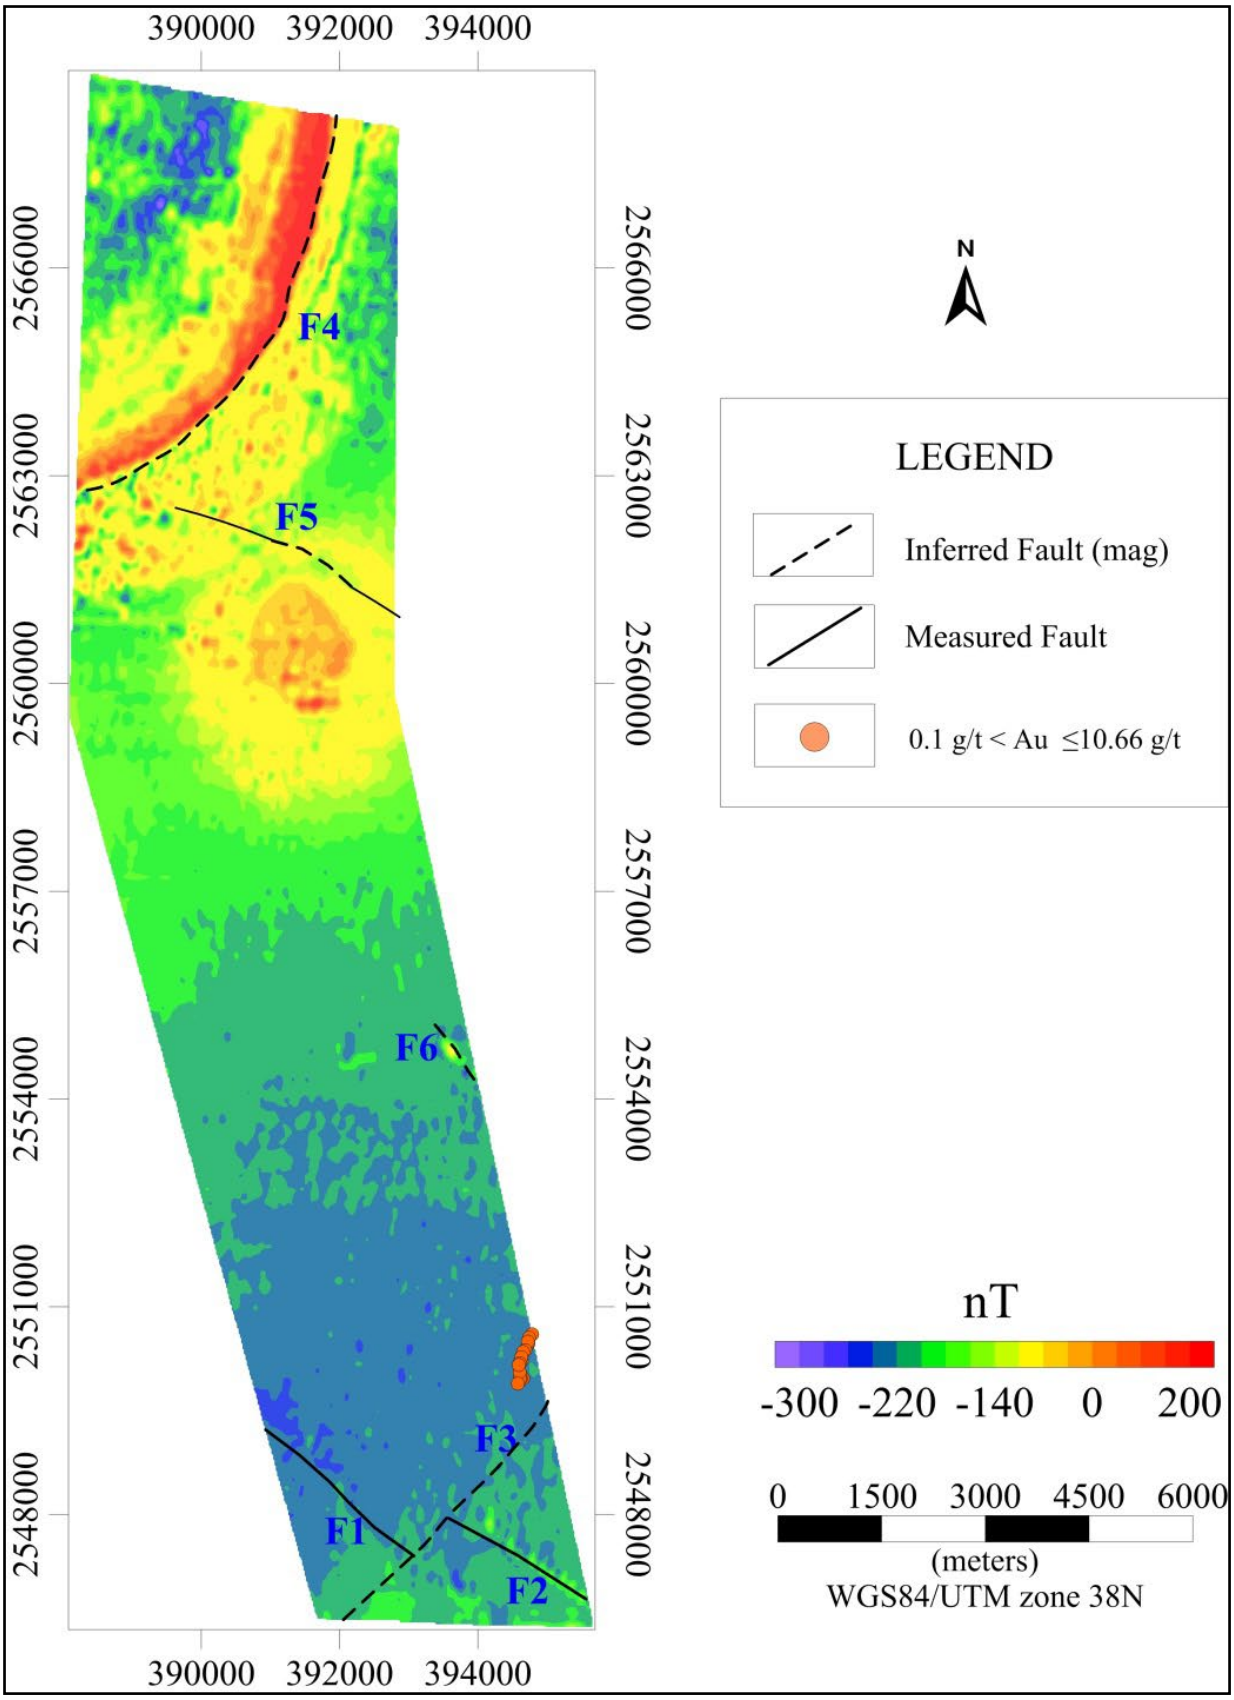

Figure 3. RTP Magnetic Anomalies and Inferred Structures of the Wadi Salamah Area

For personal use only

Magnetic Interpretation and Targeting

Within the interpreted structural architecture two distinct areas have been defined.

Northern Sector

Polymetallic (Cu, Mo) mineralisation occurs within magnetic anomaly gradient zones and intrusive-country rock contacts, controlled by lithology and contact zones, with biotite schist as a key indicator (Figure 6).

Z1: Northern high-magnetic anomaly contact zones, favourable for polymetallic mineralisation related to intrusive contacts. These types of intrusions are recognized as potential "source rocks" for Tier-1 porphyry systems. The contact zones between these magnetic bodies and the surrounding Murdama Group sedimentary rocks represent high-priority targets for copper and molybdenum mineralization.

Available data suggest that the Fault F5 may act as a hydrothermal conduit, linking F4 with the two high magnetic anomalies. Dyke-type or contact-type polymetallic mineralisation may be developed on the southeastern side of F4 and in the vicinity of F5. Exploration programs should determine whether the subcircular H1 (Figure 4) anomaly represents a deep-seated heat source.

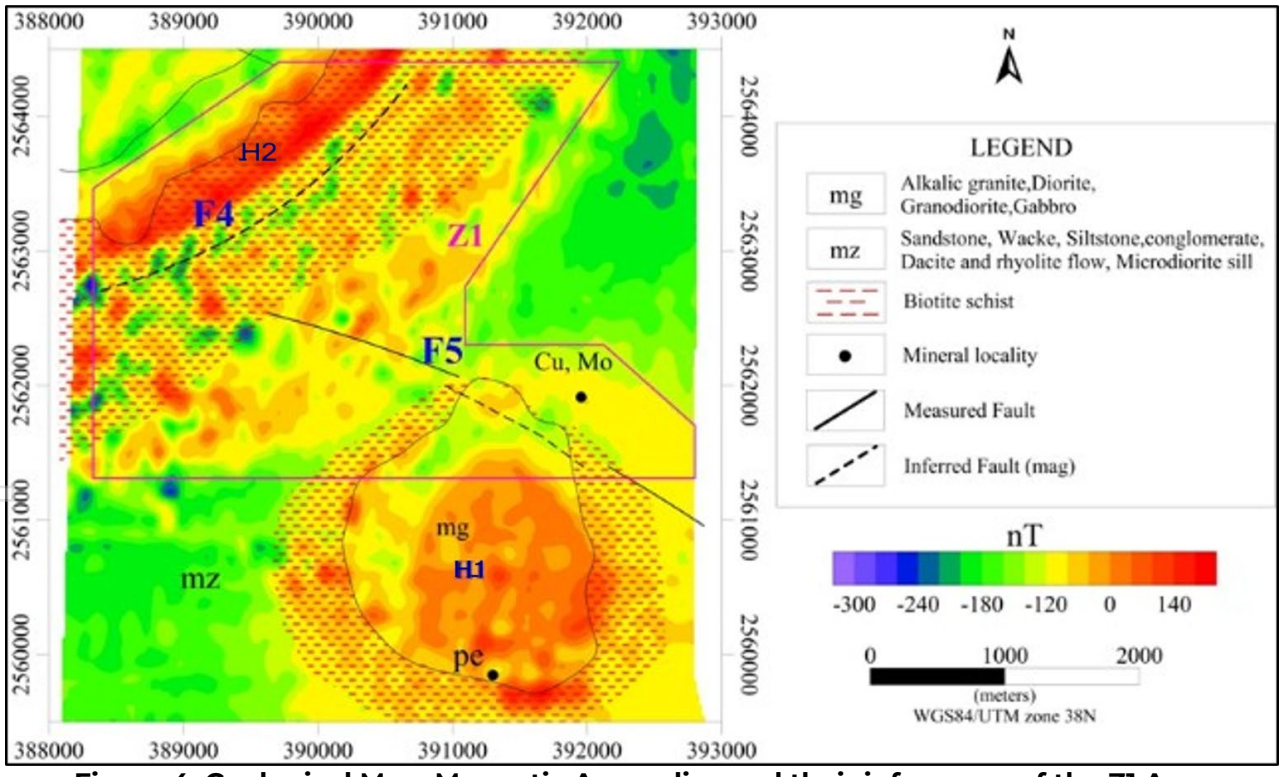

Figure 4. Geological Map, Magnetic Anomalies and their inferences of the Z1 Area (EPSG 32638: WGS84 UTM 38N)

For personal use only

Southern Sector:

Gold mineralisation is dominated by fault structural control, concentrated in linear magnetic low zones and structural intersections. Known gold occurrences and historical workings align with inferred fracture zones (Figure 5).

Z2: Southern structural network zone, prospective for quartz-vein or lode gold-silver mineralisation.

A key characteristic of this zone is its well-developed structural framework. The primary exploration aim here is to identify concealed altered rock bodies at depth by integrating surface structural mapping. It is recommended to conduct field geological reconnaissance within the F1-F2-F3 structural network to define exploration vectors.

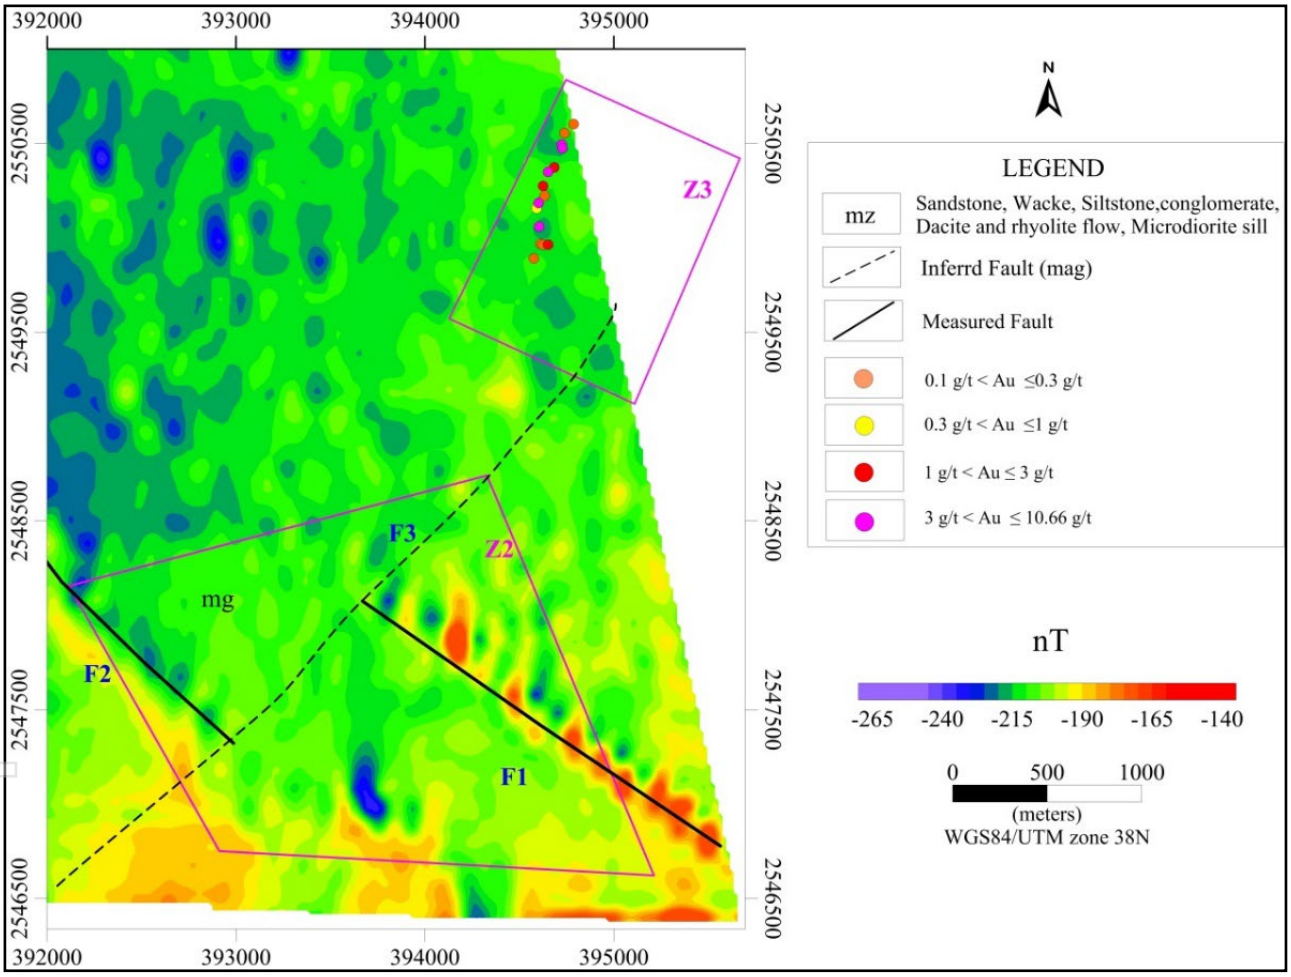

Figure 5. Geological Map, Magnetic Anomalies and their inferences of the Z2 and Z3 Area on TMI (EPSG 32638: WGS84 UTM 38N)

Z3: Eastern part of the southern area with surface gold and silver, prospective for structurally controlled quartz-vein gold.

Zone Z3 is associated with gold and silver mineralisation from previous surface sampling over a strike length of 700m. The magnetic anomaly signature here is indistinct, likely

due to the lack of ferromagnetic minerals within the structures/veins or significant surface weathering.

Despite this, the zone retains considerable exploration potential for three main reasons: First, field reconnaissance has identified numerous NE-trending fracture zones. Second, even within the weak magnetic background, subtle NW- and NS-trending low-amplitude linear features are discernible, potentially indicating fractured zones; notably, known gold occurrences mostly align with these linear lows, suggesting a structural control. Third, historical gold workings and dykes are documented east of this area.

Next Steps

The scale of the H1 and H2 anomalies confirms that Wadi Salamah has the potential to host a significant mineral system. The Company is conducting follow-up field work programs including detailed 1:10,000 geological mapping and surface rock sampling of priority zones. Based on these results the Company will finalise a 5,000 m diamond and reverse circulation ("RC") drilling program designed to test the depth extensions of the surface gold mineralisation and the core of the copper-molybdenum targets.

Supplementary IP and resistivity surveys to test vertical continuity have been conducted with the field program underway with results to be announced in the near future and the commencement of drilling expected in late Q3 2026.

Shaib Marqan

Shaib Marqan is hosted within the southern section of the Ar Rayn Terrane (Figure 2). The project is near the major northwest striking Al Amar fault zone which bounds the Ar Rayn Terrane. A significant north-south striking splay of the Al Amar fault bisects the Shaib Marqan project area with multiple subordinate northeast and east west structures in a structurally complex area.

The Ar Rayn Terrane hosts multiple mineral systems and mineral commodities, including volcanogenic massive sulphide ("VMS")-hosted copper and zinc, epithermal and orogenic gold, and iron oxide copper/gold ("IOCG") deposits.

The integration of lithological information, geochemical data and location of ancient workings resulted in the identification of four structural targets, Z1-4 (Table 1 and Figure 3).

Table 2: Structural targets Z1 to Z4 (See Figure 6 for location)

Target Area	Structural Interpretation and Targets
Z1 (Central)	Gold mineralization is structurally controlled by the main F1 phyllonite zone, in conjunction with subsidiary faults related to intrusive bodies and lithological boundaries. Target N to NNW faults (F7) along lithological boundaries

For personal use only

For personal use only

Target Area	Structural Interpretation and Targets
Z2 (Southwest)	Gold mineralization is controlled by a northerly-trending fault (F8). Favourable target for the exploration of contact zone-type gold deposits associated with the contact between Ru rock masses and HT granite intrusions. Target F8 faults along boundaries, along western lithological contact
Z3 (North)	Key target areas include the vicinity surrounding the intersection of the northwest-trending F6 and northeast-trending F3 structures, as well as the northern segment of the area bounded by the major F2 and F6 faults. Target fractured and altered rocks within the F2, F3 and F6 fault zones
Z4 (West)	The existing ancient gold occurrence is in the transition zone between high and low magnetic anomalies and adjacent to the inferred F3 structure. Target NW-trending F3 fault hosting ancient gold occurrence

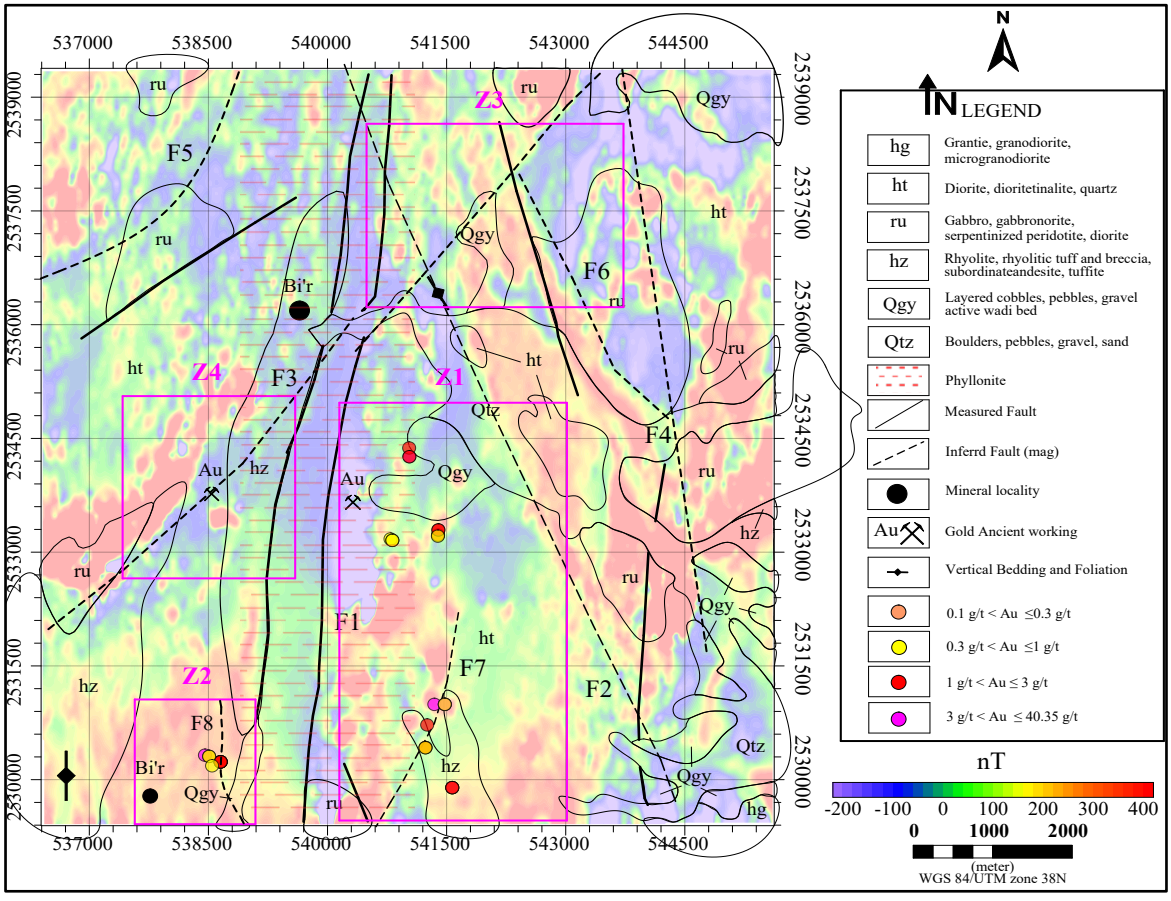

Figure 6. Target Zones (Z1-Z4), Rock Samples on RTP Magnetic Anomaly Map, Shaib Marqan Area (on TMI IVD; EPSG 32638: WGS84 UTM 38N)

For personal use only

Next Steps

The Company is conducting follow-up field work programs including detailed 1:10,000 geological mapping and surface rock sampling of priority zones at Shaib Marqan. Supplementary IP and resistivity surveys to test vertical continuity has been conducted and based on these results an initial scout drilling program of up to 5,000m is planned. The field program is underway with the commencement of drilling expected in Q3 2026.

Tanzania

During the quarter, the Company announced it was undertaking a staged 2,500 metre reverse circulation (RC) drilling programme at its 100%-owned Mpanda Project.

The programme is testing five priority targets:

Stalike: a 5 km x 600 m anomaly along an E–W cross-cutting fault with minor artisanal workings. Historical grab samples returned **very high-grade Cu (up to 13.58%) and significant Au (up to 3.24 g/t)[1].** Recent mapping defined two sub-parallel shoots dipping steeply SE. Prior RC holes did not adequately test these shoots. Planned program will test >300 m of strike with multiple holes to properly test the interpreted mineralised shoots.

Ibindi: magnetic interpretation highlights NNW shear zones with N–S splays as controls for Au. Field work extended three mineralised zones into RMI ground beneath alluvial cover. Planned 11 RC holes (~660 m) to test ~250 m of strike below cover.

Kabungu: testing northern extension and structural controls of mineralisation (historic RC intersections referenced in earlier releases) and a second western lode identified by artisanal miners. Six RC holes are planned to test ~250 m of strike and collect structural data.

Kabungu North: similar structural setting to Kabungu; **prior rock chips returned very high assays (including 36.7 g/t Au and 11.89% Cu)[2].** Four RC holes are planned to test ~200 m of strike.

[1] ASX announcements dated 12 and 13 March 2024 including the relevant Competent Persons Statement and JORC Code Table 1 disclosures

[2] ASX announcement dated 2 September 2024 including the relevant Competent Person Statement and JORC Code Table 1 disclosures

For personal use only

Kabatini West: magnetic interpretation indicates E–W shear corridors exploited by artisanal miners. Four holes are planned to test interpreted E–W shear zones and associated low magnetic corridors.

The initial 2,500 metre campaign is being staged across the priority targets described above and in the map below (Figure 7).

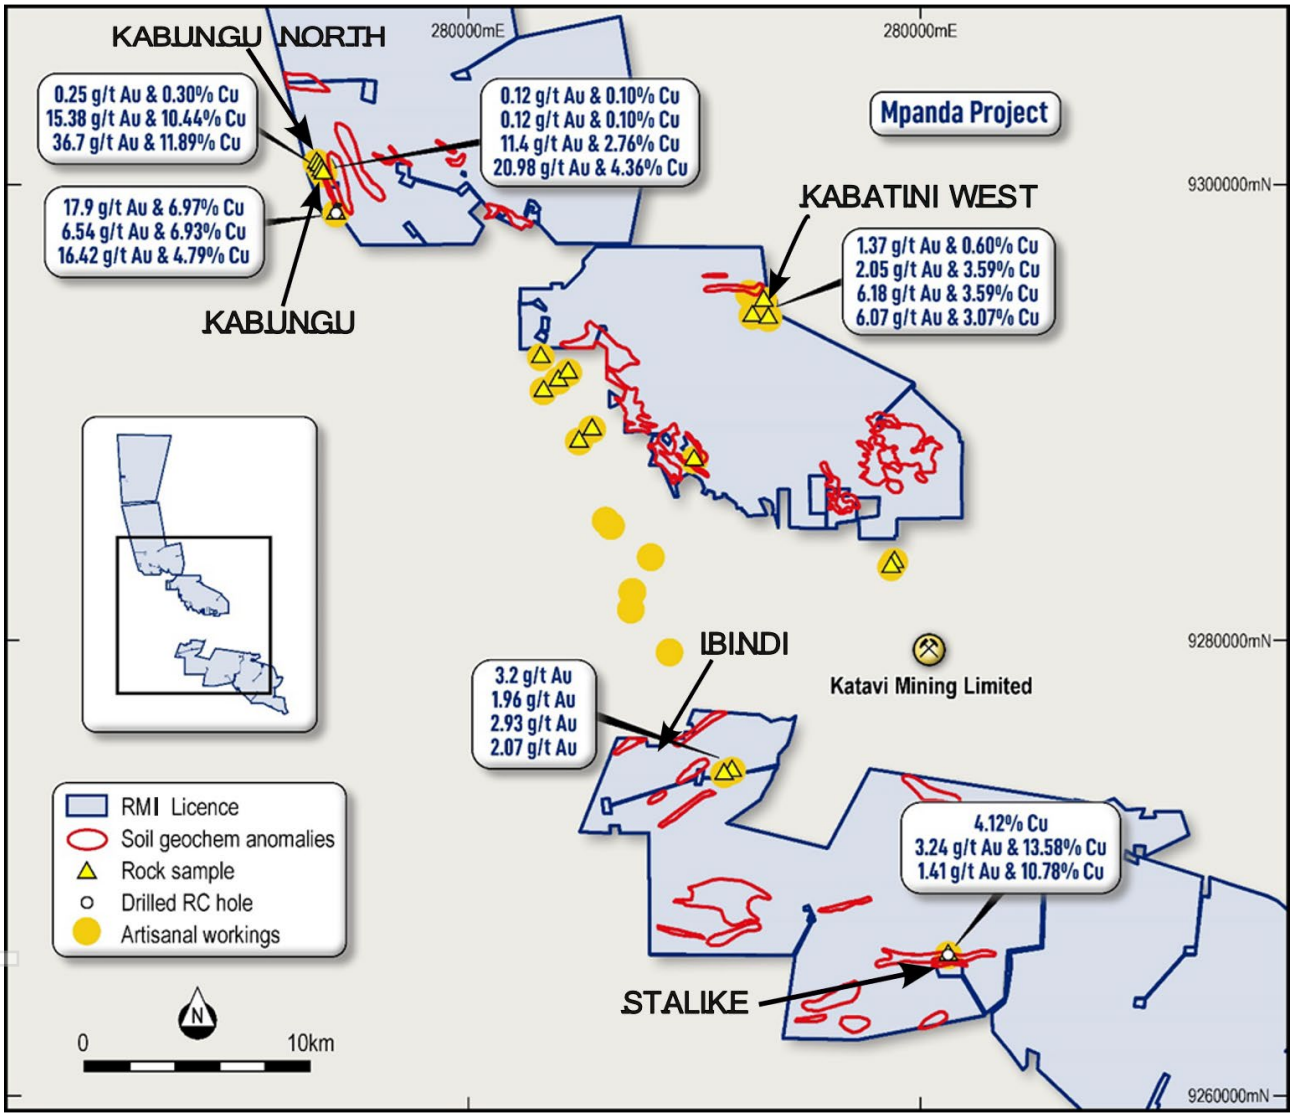

Figure 7. Target drill program locations combined with previous rock chip samples, RC drill hole, multiple historical workings and previous sample results[3]

The drilling contractor engaged to conduct the initial drilling program experienced drill rig issues and was significantly underperforming. Consequently, the Company

[3] ASX announcement dated 2 September 2024 including the relevant Competent Person Statement and JORC Code Table 1 disclosures

demobilised the drilling contractor and engaged a replacement drilling contractor who has commenced the drilling program, albeit later than originally planned.

Sample assay results are expected to be announced in the near future.

Finland

As disclosed last quarter, with the improvements in the lithium market and lithium prices, the Company had planned to commence a shallow drilling program at the granted Köyhäjoki exploration permit. The program is targeting 123 holes for 720 metres drilled. The program was initially delayed due to difficult weather conditions followed by a halt to activities requested by the mining regulator while an acceptable security instrument is provided to the regulator by the Company. The Company expects to finalise this matter soon.

Corporate

During the quarter the Company received firm commitments from professional and sophisticated investors for a placement to raise $3.5 million (before costs) ("**Placement**") through the issue of 87,500,000 fully paid ordinary shares at $0.04 per share ("**Placement Shares**"), representing a 6.98% discount to the last traded price of $0.043 per share prior to the trading halt on 1 May 2026. Chairman Asimwe Kabunga committed $300,000 to the Placement and Non-Executive Director Trevor Matthews committed $100,000, which was approved by shareholders at a general meeting held on 22 July 2026.

Funds raised through the issue of the Placement Shares are being used towards:

- A 2,500 metre drill program at the highly prospective Mpanda Copper-Gold project in Tanzania;
- Further exploration work across the Company's Shaib Marqan and Wadi Salamah Copper-Gold-Silver projects in Saudi Arabia to define priority drill targets for a combined 10,000 metres of drilling to commence in the September 2026 quarter; and
- General working capital and Placement costs.

Cashflow for the Quarter

Attached to this report is the Appendix 5B containing the Company's cash flow statement for the quarter. The Company provides the following information pursuant to ASX Listing Rule requirements:

For personal use only

For personal use only

- **ASX Listing Rule 5.3.1:**
  Approximately $665k was spent on exploration expenditure during the quarter (refer item 2.1 (d) of the attached Appendix 5B). Full details of exploration activity during the quarter are included in this report.

- **ASX Listing Rule 5.3.2:**
  Nil was spent on mine production and development activities during the quarter.

- **ASX Listing Rule 5.3.5:**
  The Company advises that $57k of payments were made to related parties and their associates during the quarter for Director fees and consultancy services.

At the end of the quarter, the Company held approximately $2.116 million in cash.

Interests in Mining Tenements

The Company provides the following information pursuant to ASX Listing Rule requirement 5.3.3:

- Mining tenement interests acquired or disposed of during the quarter: Nil
- Beneficial percentage interests held in farm-in or farm-out agreements at the end of the quarter: Not applicable.
- Beneficial percentage interests in farm-in or farm-out agreements acquired or disposed of during the quarter: Nil.

For information on mining tenements held on 30 June 2026, refer to the Tenement Schedule following this report.

June 2026 Quarter – ASX Announcements

This Quarterly Activities Report contains information extracted from ASX market announcements reported in accordance with the 2012 edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" (2012 JORC Code). Further details (including 2012 JORC Code reporting tables where applicable) of exploration results, mineral resources and ore reserves referred to in this Quarterly Activities Report can be found in the following announcements lodged on the ASX:

22/07/2026 Results of Meeting
13/05/2026 Drilling to commence at Mpanda Copper-Gold Project Tanzania
05/05/2026 Successful $3.5 million Placement to fund Tanzania Dill Program
08 /04/2026 Copper-Molybdenum-Gold Potential Identified (clarification on 14 May 2026)

31/03/2026	Priority Gold Targets at Shaib Marqan, Saudi Arabia
19/03/2026	Magnetic survey extends Mpanda copper-gold target zone
10/12/2025	Wadi Salamah ground survey complete & Shaib Marqan underway
06/11/2025	Magnetic Survey underway across Saudi Gold-Silver Projects
13/10/2025	High-Grade Gold and Silver Assays from Rock Chip Sampling at Shaib Marqan and Wadi Salamah - Saudi Arabia
21/08/2025	RMI acquires JV Interest in Saudi Exploration Projects
31/07/2025	$5M Funding Facility to advance Gold and Copper Exploration
23/07/2025	Drilling underway at Mpanda Copper-Gold Project
10/06/2025	Drilling programme commencing at Mpanda Copper-Gold Project
19/05/2025	Exploration & Development update Mpanda Copper-Gold Project
13/05/2025	Mpanda Copper-Gold exploration programme continues
14/03/2025	Saudi Arabian Exploration Programme Commences
13/01/2025	RMI granted option to acquire JV interests in Saudi Arabia
02/09/2024	More positive results from Mpanda Cu-Au Project, Tanzania
05/08/2024	Positive Results from Maiden Mpanda Drill Program, Tanzania
27/06/2024	RC Drilling commences at Prospective Mpanda Cu-Au Project, Tanzania
06/06/2024	Drilling Program to commence at Mpanda Cu-Au Project
01/05/2024	High Grade Cu-Au Assays at Mpanda Cu-Au Project, Tanzania
13/03/2024	Amendment – Significant Cu-Au Discoveries at Mpanda, Tanzania
12/03/2024	Significant Cu-Au Discoveries at Mpanda, Tanzania
05/02/2024	Two Copper-Gold Projects acquired in Tanzania

About Resource Minerals International Ltd

Resource Minerals International Ltd (ASX: RMI) strategy is to establish a long-term business based on mineral exploration and development delivering consistent shareholder value whilst operating in a sustainable way within the community and environment in which we operate.

In Tanzania. RMI has two exploration projects targeting Copper-Gold and six projects focussed on Nickel occurrences in sulphides within known and prolific mafic and ultramafic intrusions. In Finland, RMI has two projects, focusing on the exploration of Lithium. In Saudi Arabia, RMI has two exploration projects focussed on exploration for gold, silver and copper within the Arabian-Nubian Shield (ANS) which extends across much of Saudi Arabia and eastern Egypt and Eritrea and hosts significant mineral deposits.

The Board has strong ties to Tanzania, Chaired by Asimwe Kabunga, a Tanzanian-born Australian entrepreneur who was instrumental in establishing the Tanzania Community of Western Australia Inc. and served as its first President.

Tanzanian Projects	Finnish Projects
Copper-Gold • **Mpanda and Mbozi Projects** Both projects are located within the Ubendian Orogenic Belt, a major source of Ni, Cu and Au resources within Tanzania. **Nickel** • **Kabanga North Nickel Project** Situated along strike from the Kabanga Nickel Project, which has an estimated mineral resource of 58mt 2.62% Ni, or nickel equivalent grade of 3.14% (including cobalt and copper)[4].	**Lithium** • **Kola Lithium Project (Köyhäjoki exploration permit and Neverbacka permit application)** Located in the most significant lithium- mining region of Finland, and directly south of Keliber's flagship Syväjärvi and Rapasaari deposits. • **Hirvikallio Lithium Project (Laitiainen permit application)** Initial exploration works completed by GTK across the project's area identified approximately 25 km^2 with

Forward Looking Statements

Some of the statements appearing in this announcement may be in the nature of forward-looking statements. You should be aware that such statements are only predictions and are subject to inherent risks and uncertainties. Those risks and uncertainties include factors and risks specific to the industries in which the Company operates and proposes to operate as well as general economic conditions, prevailing exchange rates and interest rates and conditions in the financial markets, among other things. Actual events or results may differ materially from the events or results expressed or implied in any forward-looking statement.

No forward-looking statement is a guarantee or representation as to future performance or any other future matters, which will be influenced by a number of factors and subject to various uncertainties and contingencies, many of which will be outside the Company's control.

The Company does not undertake any obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after today's date or to reflect the occurrence of unanticipated events. No representation or warranty, express or implied, is made as to the fairness, accuracy, completeness or correctness of the information, opinions or conclusions contained in this announcement. To the maximum extent permitted by law, none of the Company's Directors, employees, advisors or agents, nor any other person, accepts any liability for any loss arising from the use of the information contained in this announcement. You are cautioned not to place

[5] Refer to ASX announcement dated 7 June 2022 "Nickel and Lithium Tenements under Exclusive Option" including the disclosed Competent Person Statement.

undue reliance on any forward-looking statement. The forward-looking statements in this announcement reflect views held only as at the date of this announcement.

This announcement is not an offer, invitation or recommendation to subscribe for, or purchase securities by the Company. Nor does this announcement constitute investment or financial product advice (nor tax, accounting or legal advice) and is not intended to be used for the basis of making an investment decision. Investors should obtain their own advice before making any investment decision.

Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

N/A

8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?

N/A

For personal use only

8.8.3	Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?
	N/A

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 31 July 2026

Authorised by: The Board of Resource Minerals International Ltd Limited.....
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.

6. Repayment of loan facilities includes interest.
