### About Iondrive

Iondrive is developing IONSolv™, a metal extraction platform based on deep eutectic solvent chemistry, designed for the selective recovery of critical minerals from primary and secondary feedstocks. Unlike conventional hydrometallurgical and pyrometallurgical approaches, IONSolv™ operates at lower temperatures, avoids aggressive acid systems, and offers a tuneable chemistry able to selectively extract individual metals. Iondrive's immediate commercial focus is the recovery of rare earth elements from end-of-life permanent magnets and the deployment of modular IONSolv™ processing capacity in the United States. Solar panel recycling and battery materials represent additional applications of the same platform.
