

Mineral Range Tungsten Project, Drilling Program Update

eMetals Limited (ASX:**EMT**) (**eMetals**) (**Company**) is pleased to provide an update on scheduled drilling activities at the Mineral Range Tungsten Project (**Project**) in Utah, USA, where it is targeting high grade tungsten mineralisation within the Mineral Range in Beaver County.

All earthworks, inclusive of the grading of access tracks and clearance of drill pad locations, have been completed, and all logistics preparations are in place for the planned drill program. The program will comprise 17 drillholes from five drill pads, with depths ranging from approximately 50 to 200 metres.

Executive Director Mr Mathew Walker commented: *"We are in regular contact with the drilling contractor who will mobilise to site for commencement of the Company's maiden drilling campaign as soon as they conclude their current contract. This is currently anticipated to be the week commencing 28 September 2026".*

The Project comprises a 100% interest in 109 mineral claims covering 2,072 acres (~838 hectares) of the Mineral Range Batholith, with approximately 12-kilometres of strike length providing multiple exploration prospects with significant potential to test known strike and depth extensions of historical mines.

The Project has an extensive history of tungsten mining within the Project area, inclusive of multiple past producing mines including Garnet (634 tonnes @ 0.64% WO₃), Big Pass (279 tonnes @ 0.79% WO₃) and Two R's (70 tonnes @ 0.58% WO₃)¹.
