24 September 2026

Diamond Drilling Commences at Beatty Park Sth

HIGHLIGHTS

- **Diamond drilling underway** at the Beatty Park Sth gold prospect., located 160km north of Meekatharra in the Peak Hill district of Western Australia.
- **Five diamond drillholes** planned for a total of **~1500m** (including precollars).
- **Targeting high-grade depth extensions** up to 250m below remarkable near-surface 2025 aircore intercepts, including[1]:
    1. ***6m at 25.8g/t Au from 30m, including 1m at 126g/t Au from 30m in BPAC016***
    2. ***10m at 38.9g/t Au from 22m, including 1m at 169g/t Au from 25m in BPAC028***
- **Structural Data**: Early diamond drilling in an area of zero outcrop will provide vital orientation data on structural elements and hydrothermal alteration zones to unlock regional scale targets.

Tambourah Metals (ASX:TMB) is pleased to advise that its Exploration Incentive Scheme (EIS) co-funded diamond drilling program is officially underway at the Beatty Park Sth prospect.

The campaign (see Table 1 and Figure 2) is designed to test the host sequence up to 250m down-dip and below outstanding, very high-grade gold intersected during prior aircore drilling campaigns[2]. Notable historical intercepts earmarked for immediate follow-up include 6m at 25.8g/t Au from 30m in hole BPAC016 and 10m at 38.9g/t Au from 22m in hole BPAC028.

GEOLOGY AND STRUCTURAL ANALYSIS

At Beatty Park Sth, gold mineralisation is hosted within strongly altered ultramafic rocks of the Narracoota Formation. Extensive chlorite, carbonate, sericite, silica and pyrite alteration observed across preceding aircore and RC drilling campaigns is consistent with hydrothermal alteration footprints characteristic of major orogenic gold systems.

Because the target area features zero surface outcrop and highly constrained legacy drilling data, this early-stage diamond core will deliver crucial data regarding structural orientation, fluid conduits, and

NEXT STEPS

Preliminary logging is currently being completed on-site. Following initial assessments, the core will be securely transported to Perth for comprehensive structural logging, cutting and assay sampling.

About Tambourah Metals

Tambourah Metals is a West Australian exploration company established in 2020 to develop gold and critical mineral projects. Tambourah is exploring for Gold and Critical Minerals at the Tambourah, Shaw River and Speewah Nth projects and Gold at the Bryah project in the Murchison region. Since listing the Company has extended the portfolio to include additional critical mineral projects in the Pilbara and gold projects in the Bryah, acquiring strategic positions in districts with known endowment and production.

Forward Looking Statements

Certain statements in this document are or may be "forward-looking statements" and represent Tambourah's intentions, projections, expectations, or beliefs concerning among other things, future exploration activities. The projections, estimates and beliefs contained in such forward-looking statements don't necessarily involve known and unknown risks, uncertainties, and other factors, many of which are beyond the control of Tambourah Metals, and which may cause Tambourah Metals actual performance in future periods to differ materially from any express or implied estimates or projections. Nothing in this document is a promise or representation as to the future. Statements or assumptions in this document as to future matters may prove to be incorrect and differences may be material. Tambourah Metals does not make any representation or warranty as to the accuracy of such statements or assumptions.

The references in this announcement to Exploration Results were reported in accordance with Listing Rule 5.7 in the following announcements:

- *"High-Grade Gold up to 126g/t Au at Beatty Park Sth" 4th August 2026.*
- *"Exceptional Gold Reported from 1m re-sampling at Beatty Park Sth" 13th October 2025.*

The Company confirms it is not aware of any new information or data that materially affects the information in the original reports and that the form and context in which the Competent Person's findings are presented have not been materially modified from the original reports.

Competent Person's Statement

The information in this report that relates to Exploration Results is based on information compiled by Mr. Bill Clayton, Geology Manager and a shareholder and Director of the Company, who is a Member of the Australian Institute of Geoscientists. Mr. Bill Clayton has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr. Clayton consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
