BELLEVUE GOLD

Bellevue to supply the gold for the regilding of St Paul's Cathedral

Huge honour bestowed on Bellevue after a global search, which saw a world-renowned gold specialist from The Goldsmiths' Company, and advisor to St Paul's Cathedral visit the mine site

Key Points

- Gold from the Bellevue Gold Project in Western Australia will be sold to London's famous St Paul's Cathedral for its regilding
- Bellevue was selected to be the gold supplier following a mine site visit by Mr. Charlie Betts (founder of Single Mine Origin) and Ms. Joanna Hardy (Second Warden of The Goldsmiths' Company in London)
- The regilding is expected to require more than 50 ounces of gold, though the final amount is yet to be determined
- Bellevue's ability to produce 'green gold' was a key factor in its selection - the Bellevue Gold Project was powered by 83.5% renewable energy in FY26, making it the lowest emission-intensive gold mine in Australia (with 0.18 tonnes CO_2e/oz)
- All residual emissions were then offset using high-quality carbon credits, ensuring Bellevue was the world's first net zero (Scope 1 and Scope 2) emission gold mine
- St Paul's Cathedral is undergoing a conservation project to restore the gilding of the ball and cross (atop the 111 metre-tall dome), and the Golden Gallery (last gilded in 1863)
- St Paul's Cathedral has sought the expert opinion of The Goldsmiths' Company. To commemorate the 700th anniversary of The Goldsmith's Company in 2027, the Goldsmith's Foundation is assisting with the regilding at St Paul's Cathedral
- The Second Warden of The Goldsmiths' Company has recommended Bellevue as the supplier of the gold leaf for the gilding of this globally iconic building (which will in-turn increase the brand profile for 'green gold' – which is also being sold to luxury jewellery and bullion markets)

Bellevue Gold Limited (ASX: BGL) (Bellevue or Company) is pleased to announce that gold from its 100% owned and operated Bellevue Gold Project in the Eastern Goldfields of Western Australia has been exclusively selected for use in the extensive refurbishment of London's famous St Paul's Cathedral.

Bellevue will supply the gold, which will adorn the top of the London landmark, where it will be used to gild the ball and cross (atop the dome) and the Golden Gallery.

The Company was selected as the exclusive gold supplier after Mr. Charlie Betts (founder of Single Mine Origin) and Ms. Joanna Hardy (Second Warden of Goldsmiths' Company) visited the Bellevue Gold Project in March 2026.

Single Mine Origin (SMO) is a certification and traceability initiative that tracks gold from a specific mine through a completely segregated supply chain to the finished product.

Ms. Hardy is a highly regarded gemmologist, with over 40 years' experience working with jewellery, beginning her career as a goldsmith. She pursued a varied career at De Beers, Philips the Auctioneers, and Sotheby's, where she was responsible for jewellery auctions worldwide. Ms Hardy is now an independent fine jewellery specialist, author and a regular jewellery specialist on the BBC Antiques Road Show. Her current role as Second Warden of The Goldsmiths' Company includes her mission to conduct due diligence on the gold sourced for St Paul's Cathedral.

Bellevue was chosen primarily because of its sustainability and traceability features. Most gold mines do not have strong traceable methods however, Bellevue's unique refining agreement with the ABC Refinery enabled the Company to maintain the supply chain provenance to demonstrate how its sustainably produced gold can then be sold (at a premium) to buyers who value the sustainable practices of Bellevue.

The Company has invested heavily in long-term sustainable solutions for its gold mine, with renewable energy supplying over 80% of the Bellevue Gold Project's annual electricity needs. Bellevue emits the least amount of greenhouse gas emissions per ounce produced of any gold mine in Australia, and is proudly the world's first net zero (Scope 1 and Scope 2) emission gold mine. Full details of the Company's sustainable practices are detailed in Bellevue's 2026 Sustainability Report (refer ASX Announcement '2026 Sustainability Report' dated 22 September 2026).

Bellevue is very proud to supply the gold for regilding London's St Paul's Cathedral as this continues the work the Company has done to sell 'green gold'. Further, Parisian luxury jewellery brand Messika has

recently become the first fine-jewellery house in the world to incorporate gold from Bellevue into its jewellery creations. The partnership between SMO and Bellevue offers jewellers a fully traceable, responsibly sourced supply of net zero gold. Founder of Messika, Ms. Valérie Messika expressed her pride in joining this new community, noting that it provides her with "The assurances required on responsibility, traceability and transparency – a great achievement when it comes to gold." This work with Messika, was greatly supported by Mr. Betts of SMO, who strongly believes that "Bellevue is absolutely world-leading in its decarbonisation of gold mining".

Bellevue's Managing Director and Chief Executive Officer, Mr. Darren Stralow said: "To be selected as the exclusive supplier of gold to St Paul's Cathedral is a huge honour. The Cathedral's Golden Gallery was last regilded in 1863, and the use of our 'green gold' means this will be a multi-generational legacy for Bellevue. We are incredibly proud of the sustainable practices we have put in place, and it is an immense achievement to be the gold provider of choice for St Paul's Cathedral in London".
