Rebuilding a reliable plant

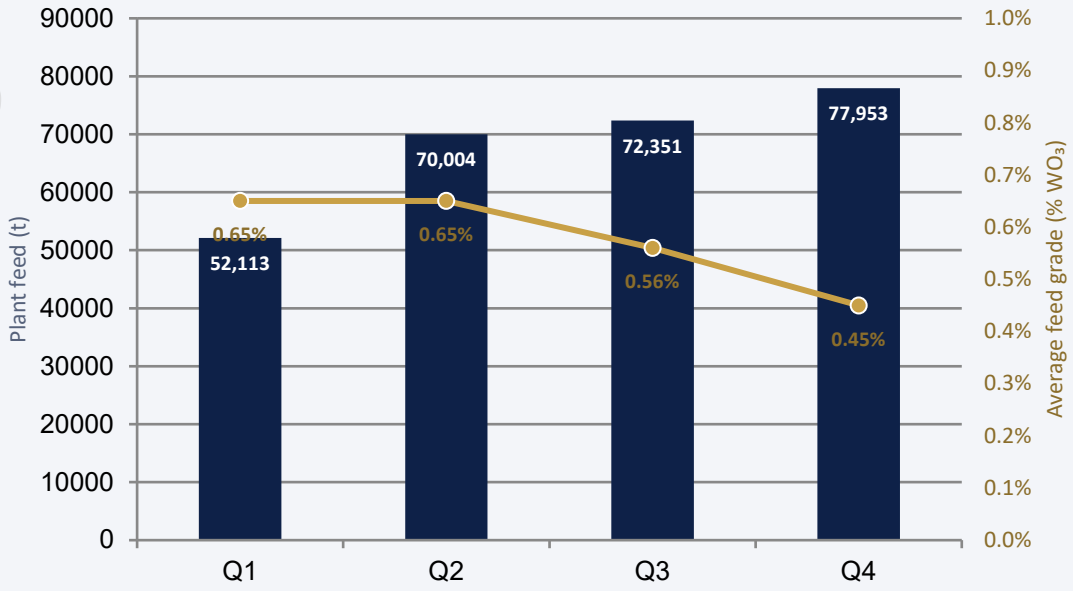

- Remediation across crushing, screening, grinding, spirals, tables and concentrate handling lifted availability and recovery
- Final open-cut mining in the current sequence completed in Q1, leaving a large stockpile base to feed the plant
- Higher-grade stockpiles blended with medium and lower grade material to hold production continuity
- Ore sorting trials, fine tungsten recovery work and power generation options advanced to lower unit costs

THE NEXT PHASE

Underground mining has begun

- Planning covered life-of-mine scheduling, mine access, dewatering, ground control and ventilation
- Underground mining contract executed with HMR Drilling in April 2026 for development and production services
- Underground activity commenced at the end of June 2026
- Access to high-grade* ore is expected to materially improve head grade, production profile and operating margins

*Dolphin Reserve Ore Grade is 0.92% WO_3

A tightening market for Western produced tungsten

- APT prices rose materially through the year on tightening supply
- Chinese production and export restrictions reinforced scarcity and heightened security of supply concerns
- Demand lifted from defence, mining, energy and technology sectors
- Stronger pricing flowed directly into realised offtake revenue
- Dolphin is one of few Western mines able to supply this critical mineral reliably

$129.0m of concentrate sold to offtake partners with end-users predominantly in Western jurisdictions.

Catalysts for the next twelve months

Underground ramp-up

Development advances through FY27, progressively supplementing stockpile feed with higher-grade ore.

Grade and margin uplift

Higher head grade is expected to lift the production profile and reduce unit operating costs.

Productivity programs

Ore sorting, fine tungsten recovery and power generation work continue to target cost reduction.

Resource growth

Exploration at Dolphin, Bold Head and nearby King Island targets supports future Resource and Reserve updates.

Near-term focus: safely process existing stockpiles while completing the transition to underground mining to lift head grade.
