Heritage Survey Advances Copper Targets at Munni Munni

Highlights

- Heritage Survey conducted with the Ngarluma Traditional Owners over priority exploration areas within the Munni Munni PGE-Cu-Ni Project.
- The drill program will focus on extensions to shallow copper mineralisation at the Ferguson Reef and high-priority copper targets along the basal contact of the Munni Munni intrusion.
- Drilling to commence immediately following site preparation.

GreenTech Metals Limited (ASX: **GRE**) (**GreenTech**) is pleased to announce the completion of Heritage Survey work over priority exploration areas at its Munni Munni PGE-Cu-Ni Project (Munni Munni) in the West Pilbara, Western Australia.

The Heritage Survey cleared proposed drill locations and access routes targeting the Munni Munni mineralised footprint, together with high-priority basal contact targets identified through ongoing geophysical work at the Project.

Drilling at Munni Munni will commence following site preparation, with the program focused on extensions to shallow copper mineralisation at the Ferguson Reef and high-priority targets along the basal contact of the Munni Munni intrusion.

Planning is underway for further heritage survey work at Munni Munni to support future exploration activities, with GreenTech looking forward to continuing its constructive engagement with the Ngarluma Traditional Owners as exploration at the Project progresses.

Chief Executive Officer, James Rattenbury, commented:

"Completion of this heritage survey work in collaboration with the Ngarluma Traditional Owners is an important milestone as we progress our next phase of drilling at Munni Munni.

"We look forward to commencing drilling at Munni Munni, targeting extensions to the shallow copper mineralisation at the Ferguson Reef as well as high-priority targets along the basal contact of the intrusion."

About GreenTech Metals

GreenTech Metals Limited (ASX: GRE) is an exploration and development company focused on advancing a globally significant critical mineral and precious metal hub in the premier West Pilbara mining region of Western Australia. The Company has successfully consolidated a dominant >500km^2 landholding, establishing GreenTech as one of the largest tenement holders in the district.

The Company's core strategy is centred on two outstanding, highly complementary deposits located only 10km apart:

- **The Munni Munni Project (PGE-Cu-Ni):** One of Australia's most significant Platinum Group Element (PGE) layered mafic intrusions. The project hosts a large, laterally continuous reef historically proven to contain platinum, palladium, rhodium, gold, copper, and nickel.
- **The Whundo Project (Cu-Zn-Au):** An advanced, high-grade brownfield Volcanogenic Massive Sulphide (VMS) copper-zinc-gold project with significant resource expansion potential across a highly prospective structural corridor.

By consolidating the Munni Munni and Whundo Projects alongside the broader underexplored West Pilbara tenure, GreenTech Metals is executing a targeted vision to discover, define, and develop a multi-commodity district to supply the growing demands of the green energy and critical minerals markets.
