Barlee Project (Gold)

During the quarter, exploration continued at the Barlee Project, 230 km north of Southern Cross (Figure 1). Activities included a 17-hole RC drilling program and a soil geochemical survey. Assay results were also received for re-split samples from the maiden RC drilling program completed in May.

RC Drilling

The latest RC drilling program at the project has now been completed, with **17 drillholes for a total of 2,150 metres** completed across the **Gromit and Astro Prospects**. The program was designed to follow up previously identified gold mineralisation and test extensions to mineralised zones identified during the maiden drilling program completed in the first half of 2026.

Planned drilling at the **Odie Prospect** could not be completed due to weather conditions restricting access to the prospect. This planned drilling will be completed when a drill rig is next at the Project.

Assay results from the latest RC drilling program are pending and will be reported once received and reviewed by the Company, within approximately two to three weeks.

Re-split Assay Results

Re-split samples from the maiden RC drilling program completed in the first half of 2026 have been received (see ASX announcements 23 June 2026 and 1 July 2026). Selected 1m samples from previously reported 4m composite intervals have been re-submitted for assay to provide additional confidence in the original assay results and further define the distribution and tenor of gold mineralisation within the intersected zones.

The re-split results have confirmed the presence of significant gold mineralisation and provide additional information to assist with geological interpretation and the planning of future exploration programs.

Significant intersections include:

Gromit Prospect

- **15m @ 1.02g/t Au from 12m**
  - **Including 2m @ 2.79g/t Au and 2m @ 2.83g/t Au**
- **15m @ 1.05g/t Au from 29m**
  - **Including 3m @ 3.75g/t Au and 1m @ 1.41g/t Au**
- **1m @ 1.9g/t Au from 16m and 1m @ 2.02g/t Au from 30m**

Astro Prospect

- **9m @ 0.58g/t Au from 30m**
  - **Including 2m @ 1.48g/t Au**
- **2m @ 2.81g/t Au from 66m**

Odie Prospect

- **5m @ 1.21g/t Au from 33m**

Re-splits have also highlighted the Astro West and Lost Bolt Prospects with high grade gold intersected:

Astro West Prospect

- **6m @ 0.5g/t Au from 40m**
  - **Including 1m @ 2.14g/t Au**

Lost Bolt Prospect

- **1m @ 3.11g/t Au from 120m**

At the **Gromit Prospect**, the highest individual gold assay returned from the maiden drilling program was **5.6 g/t Au in drillhole 26BAR013 from 30m to 31m**.

The additional re-split data further supports the interpretation of discrete zones of gold mineralisation at the prospects and will assist the Company in refining the geological model and targeting potential extensions in future drilling programs.

Soil Geochemical Program

The project's soil geochemical sampling program has been delayed due to poor weather conditions. The program is designed to complete UltraFine+® (**UFF**) geochemical coverage over prospective areas of the project, providing additional data to identify and refine gold anomalies and generate targets for future drilling.

Field activities will recommence when conditions allow, with approximately 60% of the program now completed with the remaining work expected to be finalised within approximately two weeks, subject to weather and ground conditions. Results will be assessed as available and incorporated into the Company's ongoing exploration targeting.

The Company will provide further updates as assay results from the latest RC drilling and soil sampling programs are received and interpreted.

In addition to the active gold projects, Duketon maintains the Duketon Nickel Project, located 130km north of Laverton (WA). The current Mineral Resources are detailed below.

Rosie – Mineral Resource Estimate

The Indicated and Inferred Mineral Resource Estimate (**MRE**) for Rosie of **2.77 million tonnes at 3.27% nickel equivalent** is reported in accordance with the 2012 JORC Code (Table 1 and Table 2). Note: For Tables 1 and 2.

(1) Assumptions for the nickel equivalent are: Prices (in USD) $8.00/lb Ni, $3.65/lb Cu, $15.30/lb Co, $1,100/oz Pt, $2,300/oz Pd and $15,500/oz Rh.

(2) Recovery assumptions from metallurgical test work are: Pentlandite domain 96.9% Ni, 99.5% Cu, 95.1% Co, 78.2% Pt, 97.6% Pd and 83.4% Rh. Violarite domain 88.7% Ni, 94.5% Cu, 88.5% Co, 57.6% Pt, 87.3% Pd and 64.8% Rh.

(3) The following equations were used to calculate nickel equivalent – Cu and Co measured in ppm and PGEs measured in ppb – all converted to percentages for NiEq calculation:

a. Pentlandite domain: NiEq = Ni% +(Cu% * 0.995 *(3.65/8)) + (Co% * 0.951 *(15.3/8)) + (Pt% * 0.782 * (1100 *14.583/8)) + (Pd% * 0.976 * (2300 * 14.583/8)) + (Rh% * 0.834 *(15500 * 14.583/8)).

b. Violarite domain: NiEq = Ni% +(Cu% * 0.945 *(3.65/8)) + (Co% * 0.885 *(15.3/8)) + (Pt% * 0.576 * (1100 *14.583/8)) + (Pd% * 0.873 * (2300 * 14.583/8)) + (Rh% * 0.648 *(15500 * 14.583/8)) where 14.583 is the amount of troy ounces per pound.

The resource includes a reportable nickel equivalent number based on metallurgical work completed to determine recoveries (see ASX announcements 8 July 2020 and 10 July 2020). It is the opinion of DKM that all the elements included in the metal equivalents calculation have a reasonable potential to be recovered and sold.

Ongoing Strategy

The Company remains well positioned to drive value from three approaches:

1. Exploration opportunities on current tenure - assessing early-stage exploration opportunities across all projects looking at all commodities;
2. Acquiring new tenure – via opportunistic applications or by simple/low-cost commercial means; and
3. Expand/Study Nickel Resources - review mining study and target extensions to Rosie and C2 and the greater area for Ni-Cu-PGE's.
