Quarterly Report

For the quarter ended 30 September 2026

27 October 2026

Platina's vision is to become a leading exploration company by exploring our high-potential projects and leveraging cutting-edge technology, innovative strategies, and the knowledge of our highly skilled technical team.

platinaresources.com.au
ASX: **PGM**

Highlights

- Maiden RC drilling at Sunrise Bore confirmed a broad gold system: 29m @ 3.38g/t Au from 11m, incl. 11m @ 8.62g/t Au.
- ~80m-thick mineralised zone open down-dip and along strike, with only ~200m of the 1.2km trend tested.
- Final US$2m received from Rio Tinto, completing the US$14m Owendale sale.
- Post quarter: Phase 4 aircore drilling under way at Mt McKenna; applied for two exploration licences at the Jove Tin Project.

Managing Director's Report

Dr Paul Polito
Managing Director & CEO

"The December quarter will be our busiest yet, with Phase 4 aircore drilling and assays at Mt McKenna, planned RC drilling at Target 2, follow-up design at Sunrise Bore and first work at Jove.

Dear Shareholders,

It is a privilege to present my first quarterly report since joining Platina as Managing Director and CEO on 20 July 2026. I was drawn to the Company by a rare combination: a 100%-owned, district-scale gold portfolio in Western Australia's Laverton region, one of the country's premier gold provinces, and a balance sheet that allows us to explore with conviction.

The September quarter delivered the first modern test of our newest Laverton project. Our maiden reverse circulation (RC) program at **Sunrise Bore**, the first drilling on the project in 28 years, confirmed a broad gold system. The standout intercept of **29m @ 3.38g/t Au from 11m, including 11m @ 8.62g/t Au**, in SBRC0023 sits within a mineralised zone with an estimated true thickness of around 80m that remains open down-dip and along strike. Importantly, we have tested only about 200m of a 1.2km mineralised trend. Our priority now is to understand the controls on the higher-grade zones so that the next round of drilling is as targeted as possible.

At **Mt McKenna**, our flagship project 13km east of Laverton, the team integrated the Phase 2 and 3 aircore results and designed the next program. Shortly after quarter end we began a 53-hole, ~3,200m Phase 4 aircore program at Granite Well East to test the strike and width of the gold corridor defined earlier this year. A 13-hole RC program at Black Rock and Granite Hill, co-funded by the WA Government, is planned for later in 2026. At **Mt Morgans South**, historical data compilation, access and heritage work are building a ranked pipeline of drill targets.

In September we received the final US$2 million payment from Rio Tinto, completing the US$14 million sale of the Owendale Scandium Project. Those proceeds have funded Platina's larger focus on gold, and we ended the quarter with A$10.746 million in cash.

Our growth strategy also extends beyond gold where compelling opportunities arise. Following quarter-end, we applied for two exploration licences covering approximately 992km² at the Jove Tin Project in the Northern Territory. Historical evidence of widespread tin mineralisation, combined with several large, apparently untested geophysical targets, presents an opportunity worthy of systematic investigation and is clearly within Platina's skill set as an explorer and execution capability.

Importantly, Jove complements rather than replaces our primary focus on Laverton gold exploration.

The December quarter will also be a busy period for Platina, with Phase 4 aircore drilling and assays at Mt McKenna, planned RC drilling at Target 2, and follow-up geophysical surveys at Sunrise Bore. I thank shareholders for their support and our team, contractors and Traditional Owners for their work during the quarter.

Dr Paul Polito
Managing Director and CEO

Projects

Sunrise Bore Gold Project

Laverton Region, Western Australia

Platina's maiden RC drilling program at the 100%-owned Sunrise Bore Gold Project, 44km south of Laverton, confirmed a broad gold system and validated historical mineralisation in the first drilling on the project in 28 years.

The Phase 1 program comprised 23 RC holes for 2,863m (Figure 1 and 2), drilled on six east-west lines at approximately 40m spacing to depths up to 180m. It targeted the core area around historical workings and drilling.

Significant results reported on 31 August 2026 included:

- **29m @ 3.38g/t Au** from 11m, including **11m @ 8.62g/t Au**, in SBRC0023
- **18m @ 1.12g/t Au** from 51m, including 2m @ 6.25g/t Au, in SBRC0028
- **37m @ 0.43g/t Au** from 43m, including 2m @ 5.26g/t Au, in SBRC0032
- **55m @ 0.25g/t Au** from 6m in SBRC0027

Gold is hosted in basalt with disseminated pyrite, intruded by quartz dolerite and minor intermediate and felsic sills. Mineralisation is associated with manganiferous quartz veining in the oxide zone and quartz-pyrite veining in the transitional and fresh zones. The main mineralised zone dips approximately 55° to the east, has an estimated true thickness of around 80m and remains open down-dip and along strike. The highest grades occur mainly in the oxide zone and may reflect supergene enrichment, so testing the primary mineralisation in fresh rock is a priority for follow-up drilling.

The program tested only around 200m of a 1.2km mineralised trend within a 3.6km prospective structural corridor. Next steps include multi-element geochemistry and magnetic susceptibility measurements on all 2026 samples, consideration of geophysical surveying, and integration with historical data to refine the geological model and design the next phase of RC drilling.

Figure 1. *Maiden drilling at Sunrise Bore comprised 23 RC holes for 2,863m*

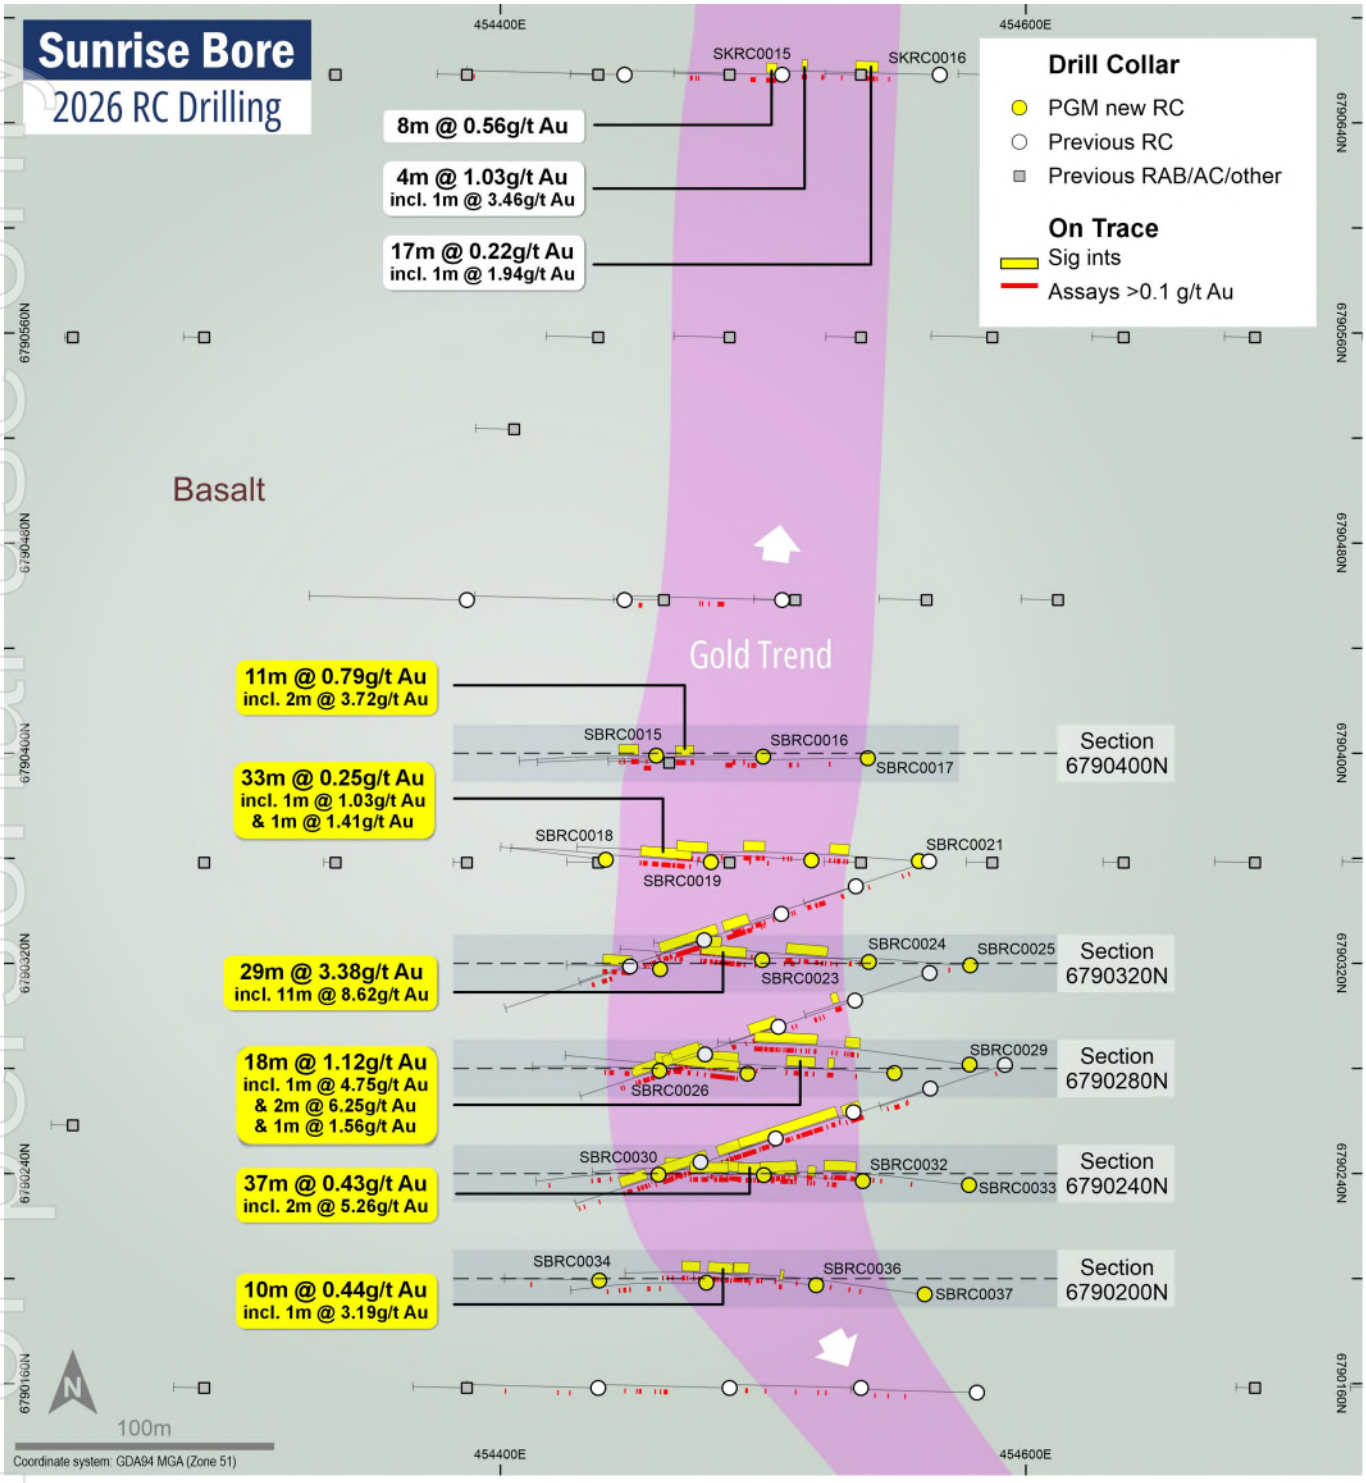

Figure 2. *Map showing Platina's 2026 RC drilling underlain with interpreted basalts. Map also shows interpreted gold mineralisation trend open along strike.*

For personal use only

Mt McKenna Gold Project

Laverton Region, Western Australia

Platina's 100%-owned Mt McKenna Project covers 174km² within Western Australia's Eastern Goldfields. The project lies 13km east of Laverton, close to Genesis Minerals' Laverton Project (3.9Moz gold resources) and 20km north-east of the Granny Smith Mine (3.9Moz gold resources), in greenstones traversed by major faults and intrusives conducive to hosting multi-million-ounce deposits.

During the quarter, Platina integrated the results of the Phase 2 and Phase 3 aircore programs (220 holes for 10,809m). Drilling defined a mineralised corridor extending for more than 1km at Granite Well East, with results including 1m @ 7.10g/t Au from 40m in MMKAC0239, and a north-north-east trending structure extending for more than 800m at Black Rock and Granite Hill, including 4m @ 4.69g/t Au from 16m in MMKAC0162.

Granite Well East lies where two major structural corridors are interpreted to intersect across mafic, ultramafic and granitoid domains, a setting comparable to major gold deposits in the Leonora–Laverton region. Several Phase 3 intercepts ended at or near the bottom of hole, indicating mineralisation remains open at depth.

Subsequent to quarter end, on 6 October 2026 Platina commenced Phase 4 aircore drilling at Granite Well East (Figure 3 and 4). The 53-hole, ~3,200m program is designed to test the strike continuity and lateral extent of the gold mineralisation and to provide vectors towards higher-grade zones. Results will guide follow-up RC drilling and/or induced polarisation (IP) surveys.

A 13-hole RC program on the Mt McKenna tenement, supported by $109,200 under the Western Australian Government's Co-funded Exploration Drilling Program, is planned for early 2027 to test the Black Rock and Granite Hill mineralisation at depth (Figure 4).

Figure 3. *Aircore drilling at the Mt McKenna Gold Project.*

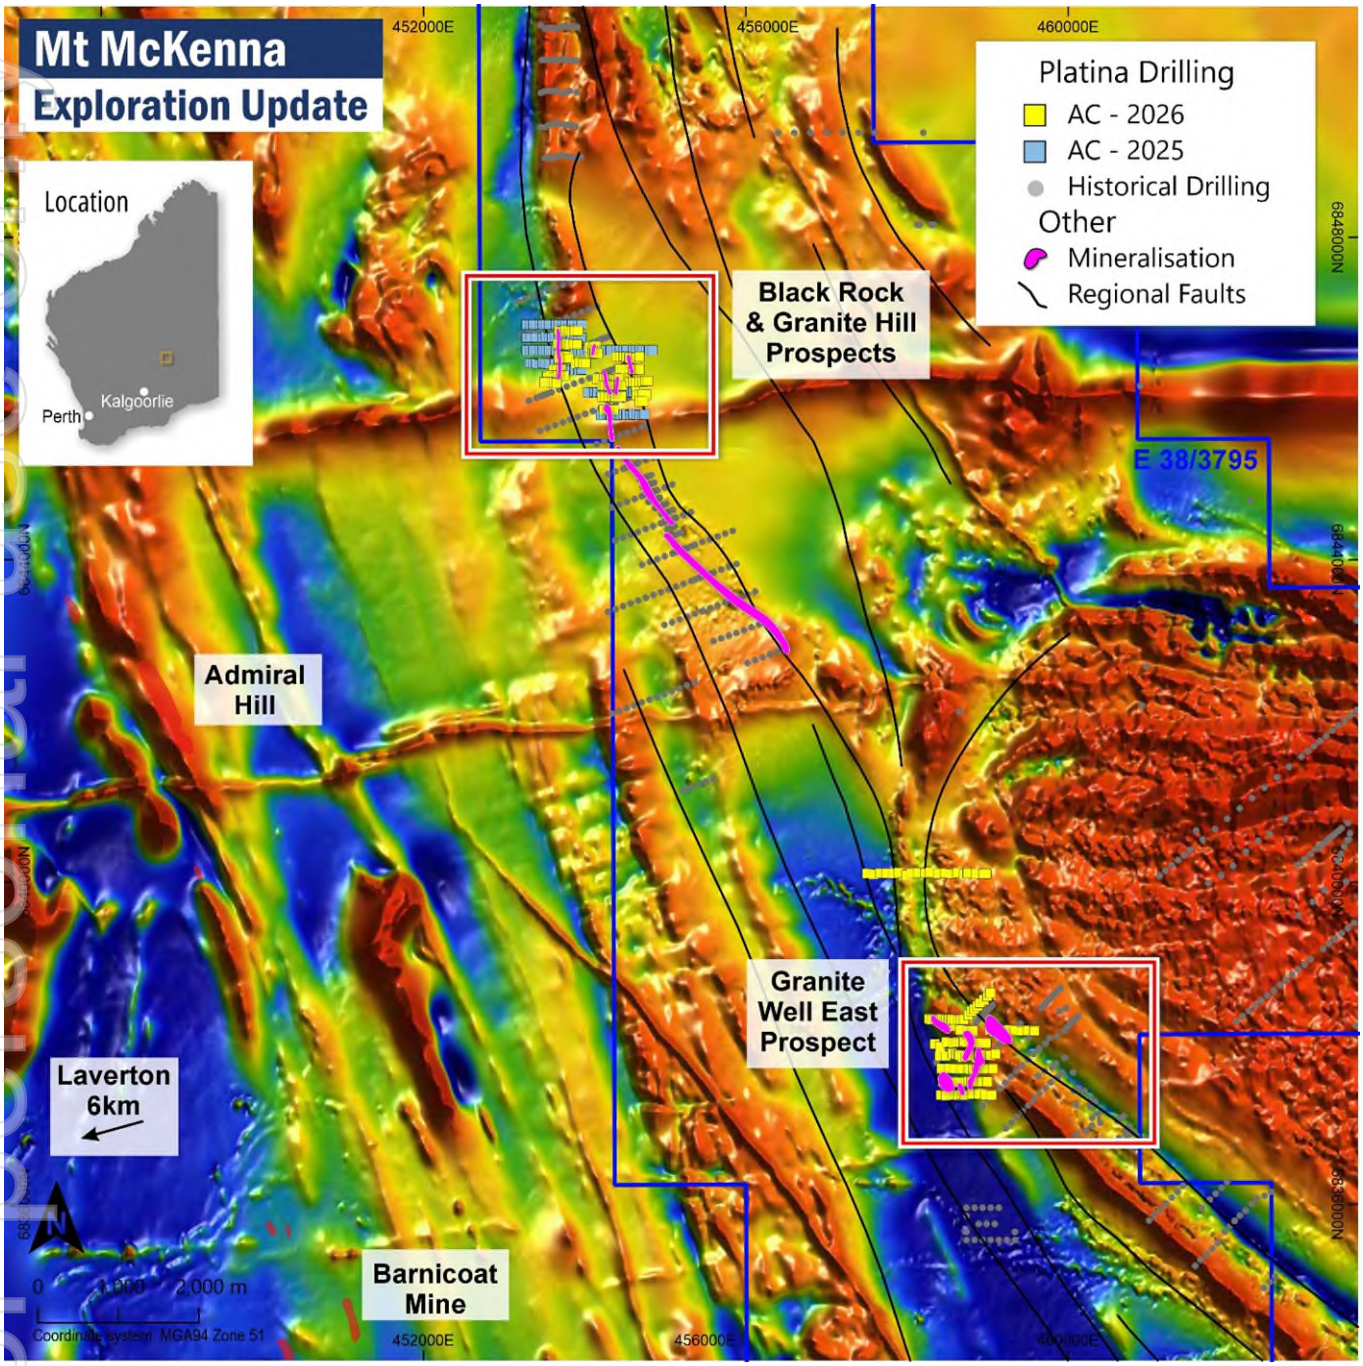

Figure 4. *Map showing historical drilling and Platina's aircore drilling on Mt McKenna's E38/3795 tenement. Red boxes indicate areas of aircore drilling focus and observed mineralised corridors are shown in pink. Map underlain by the Geological Survey of Western Australia's (GSWA) reprocessed and Platina's newly acquired merged TMIRTP 1VD magnetic image by Core Geophysics.*

For personal use only

Mt Morgans South Gold Project

Laverton Region, Western Australia

The 100%-owned Mt Morgans South Gold Project comprises 18 tenements covering 126.4km² approximately 35km south-west of Laverton, around 6km west of the Jupiter mine and 7.5km south-east of the Westralia mine, and includes part of the Celia Fault.

Following completion of the acquisition from Genesis Minerals Limited in June 2026, work is focused on compiling and reviewing historical exploration data and progressing access and heritage arrangements. This will be followed by soil sampling across identified geophysical and geochemical anomalies (Figure 5), with the resulting datasets integrated to generate a ranked pipeline of drill targets. Exploration at Mt Morgans South will be coordinated with Mt McKenna and Sunrise Bore across Platina's >312km² Laverton portfolio.

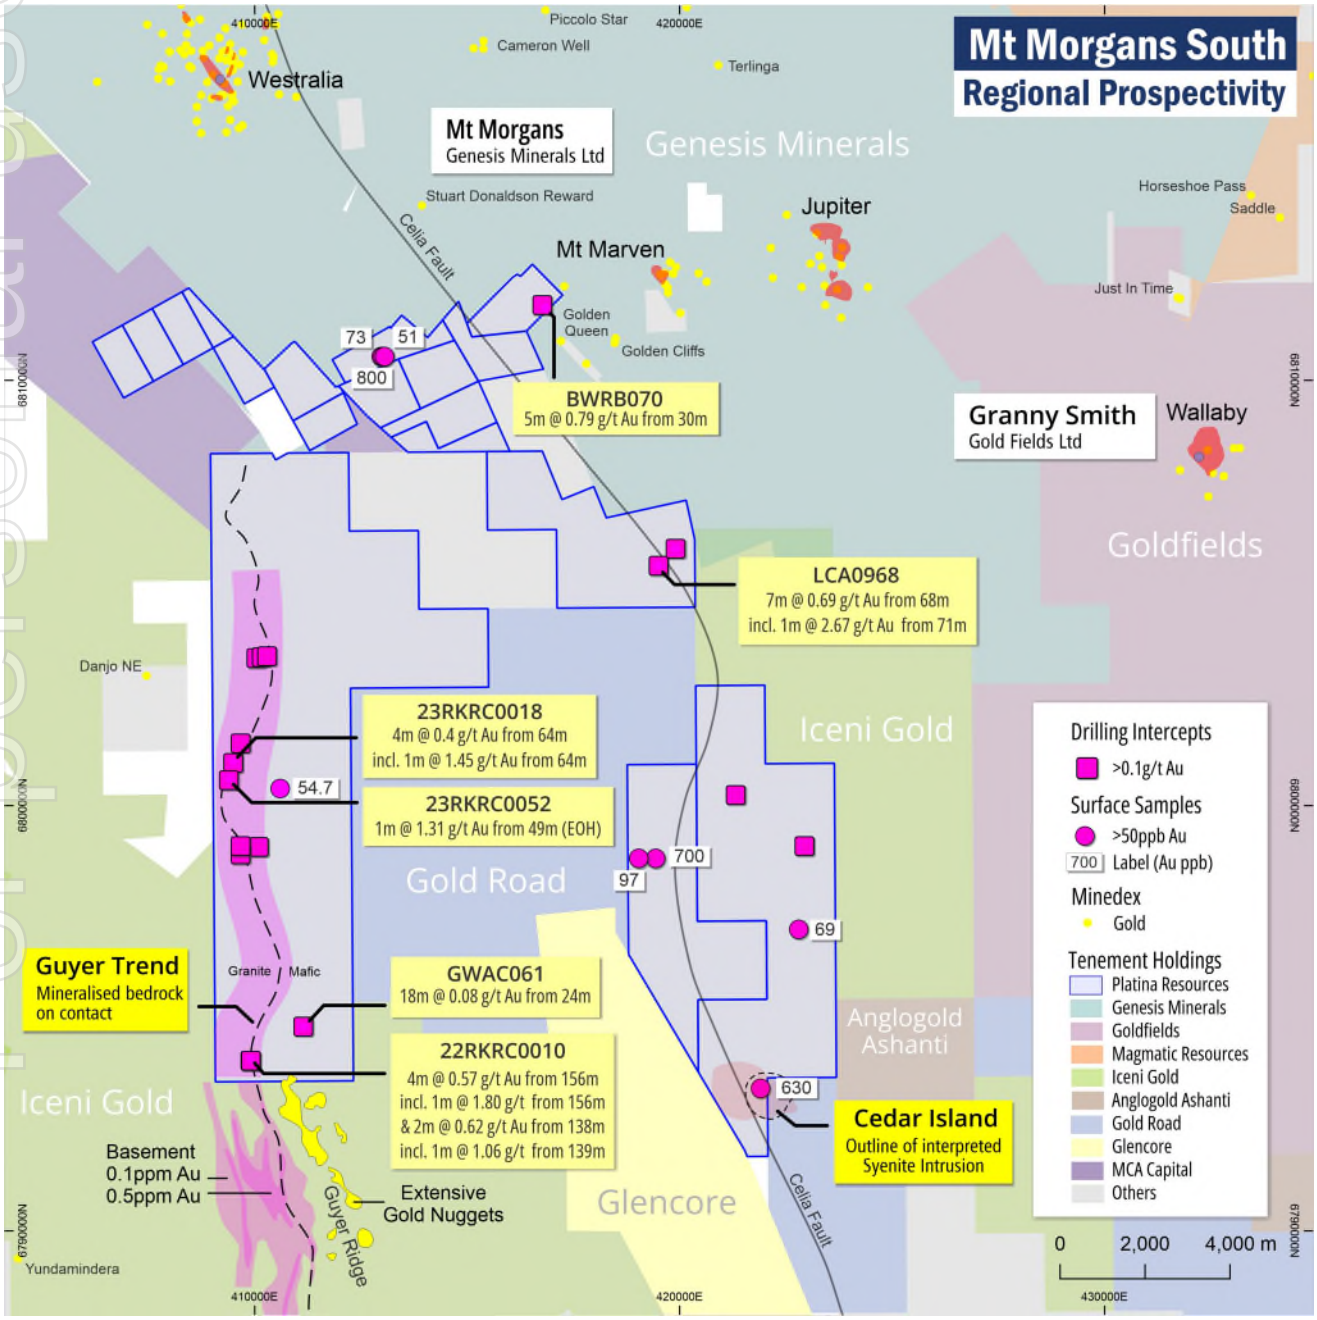

Figure 5. *Mt Morgans South Project showing mineralised trends interpreted from historical exploration, Platina's near-term exploration target areas and the tenement holdings of major gold producers in the district.*

For personal use only

Jove Project (acquired subsequent to quarter end)
Birindudu Basin, Northern Territory

Subsequent to quarter end, Platina has applied for two contiguous exploration licences covering approximately 992km² at the Jove Tin Project in the Northern Territory, adding a potentially significant tin exploration opportunity to its portfolio.

Jove's appeal lies in extensive historical evidence of tin mineralisation, with cassiterite identified across a 38km regional corridor, but no confirmed primary bedrock source.

Platina's technical review has identified four magnetic anomalies, including a feature measuring approximately 6.3km by 5.4km, which are not known to have been drill-tested. These targets present an opportunity to investigate a potentially concealed granite-related tin system, although their geological significance remains unconfirmed.

Subject to licence grant and regulatory approvals, Platina intends to undertake staged mineralogical investigations and geophysical surveys to refine targets before considering drilling, consistent with its strategy of pursuing large-scale discovery opportunities through disciplined capital allocation.

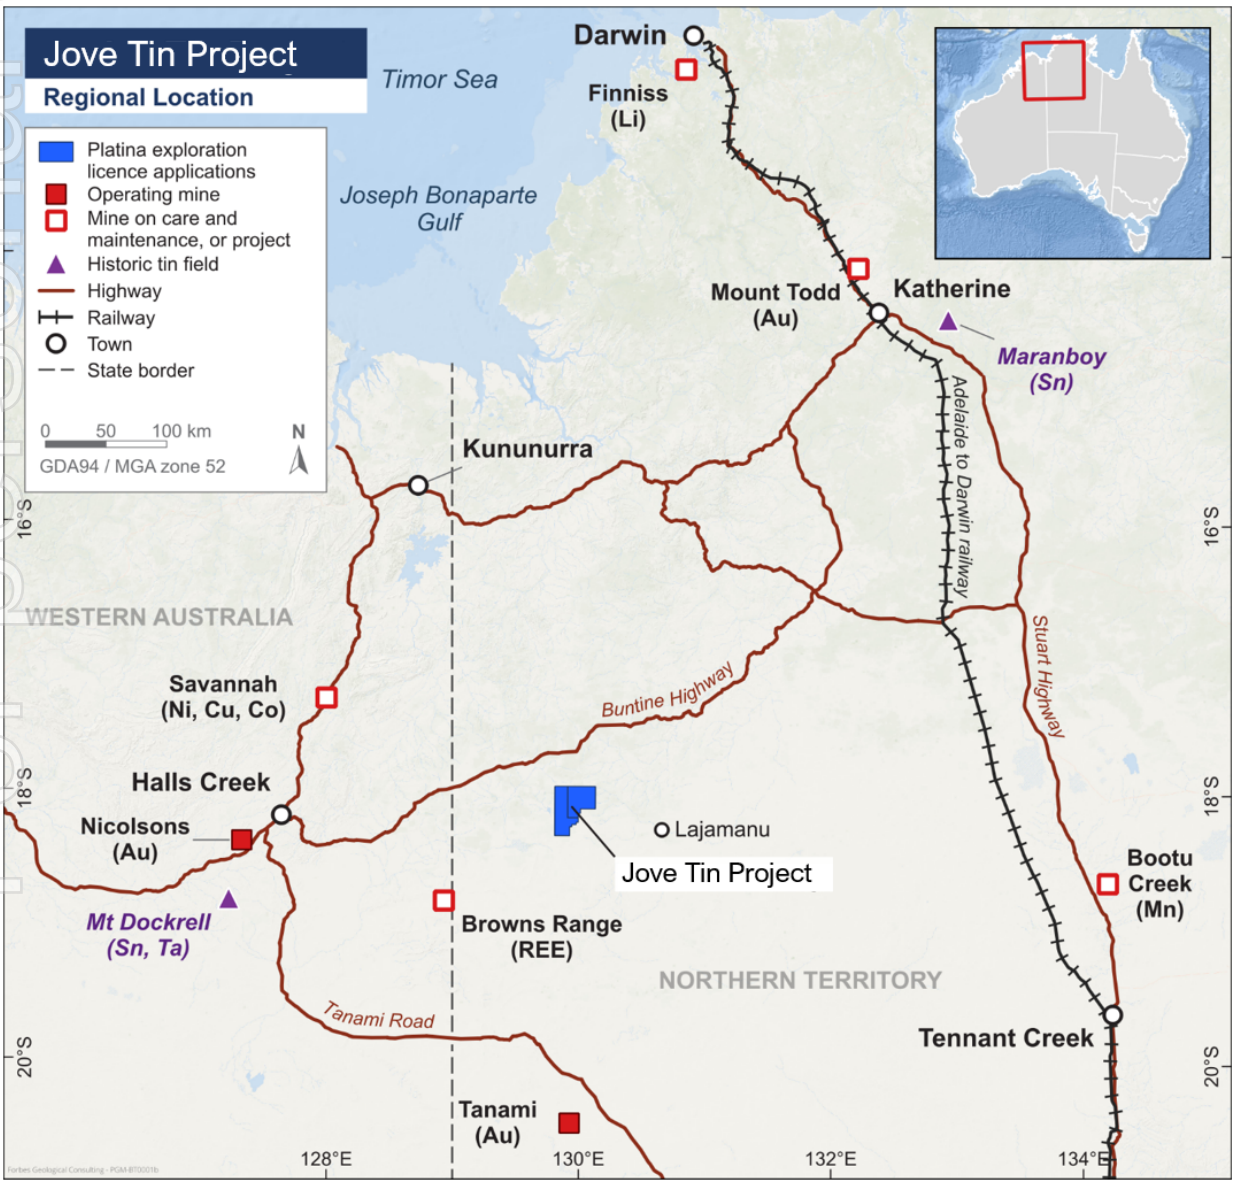

Figure 6. Location of the Jove Project.

Beete Gold Project

Eastern Goldfields, Western Australia

The Beete Gold Project is located in a historical high-grade mining district near Norseman, 10km south of the Scotia gold deposit. Recent gold discoveries to the south highlight the region's significant potential.

No field work was carried out during the quarter. Beete continues to be assessed against Platina's technical and capital allocation criteria, with an RC program around the historical Beete mine under consideration subject to native title requirements.

Brimstone Gold Project

Eastern Goldfields, Western Australia

The Brimstone Gold Project covers 70km^2 and is located 40km north-east of Kalgoorlie within a proven gold district, close to the Penny's Find gold deposit and 25km from the Kanowna Belle gold mine.

Under the binding conditional Farm-in and Joint Venture Term Sheet announced on 25 May 2026, NE Minerals Pty Ltd may earn an 80% interest within three years by funding all exploration, evaluation and development expenditure through to a Decision to Mine. Platina will retain a 20% interest and contribute pro rata thereafter. The parties are continuing to work towards finalising definitive agreements.

Jubilee Project

Yilgarn Craton, Western Australia

Jubilee is located within the prolific gold-producing Yilgarn Craton, 15km east of Meekatharra.

The tenement application remains subject to native title negotiations for a suitable heritage agreement, as required for the grant to proceed. Platina remains confident an agreement can be reached, after which the application should proceed through the Department of Mines' usual grant process. Once granted, the company expects to lodge a program of work immediately, paving the way for exploration to begin.

Outlook: December 2026 quarter

- Mt McKenna: complete Phase 4 aircore drilling at Granite Well East and report assays
- Sunrise Bore: multi-element geochemistry, magnetic susceptibility, ground gravity, drone magnetics and geological modelling to design the next RC program
- Mt Morgans South: data compilation, heritage and access arrangements, and soil sampling
- Jove: proceed through the tenement granting process into 2027
- Brimstone: finalise definitive farm-in and joint venture agreements with NE Minerals

Corporate

Cash

At the end of the September 2026 quarter, Platina had A$10.746 million in cash (30 June 2026: A$8.62 million), following receipt of the final US$2 million Owendale payment.

Owendale sale completed: final US$2 million received

Platina received the final US$2 million payment from a wholly owned subsidiary of Rio Tinto in September 2026, completing the sale of the Owendale Scandium Project in New South Wales (now Rio Tinto's Burra Project). Total proceeds of US$14 million were received providing Platina with the financial capacity to both grow and fund a meaningful exploration across its Laverton gold portfolio.

Investments

During the quarter, Platina sold 353,533 shares in Kalamazoo Resources Limited for net proceeds of $61,760. At 30 September 2026, Platina had 896,467 shares valued at $129,987.

Managing Director and CEO

Dr Paul Polito commenced as Managing Director and Chief Executive Officer on 20 July 2026. Dr Polito has more than 30 years of experience across exploration, geoscience, mine development and business development, including senior roles with IGO and Anglo American.

ASX Additional Information

ASX Listing Rule 5.3.1: Exploration and Evaluation Expenditure (capitalised and expensed) during the quarter was $830,000. Full details of exploration activity during the quarter are set out in this report.

ASX Listing Rule 5.3.2: There were no substantive mining production and development activities during the quarter.

ASX Listing Rule 5.3.5: A total of $204,722 was paid to related parties during the quarter, comprising the Managing Director's salary, payout of annual leave entitlements to Mr Corey Nolan and Non-Executive Director fees. During the quarter, HopgoodGanim, a legal firm of which director Mr Brian Moller was a partner until 30 June 2024, was paid legal fees of $18,557.

References to previous ASX releases

The information in this report that relates to exploration results was last reported by the company in compliance with the 2012 Edition of the JORC Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves in market releases dated as follows:

4 September 2025	New exploration prospects defined at Beete Project, Western Australia
20 October 2025	Sunrise Bore Gold Project expands Laverton landholding in WA
20 January 2026	Aircore drilling identifies 1.5km mineralised structure
18 June 2026	Completion of Mt Morgans South Project Acquisition
26 June 2026	Completion of Sunrise Bore Acquisition and Drilling to Begin
29 June 2026	Mt McKenna Gold Project – New Gold Zones Discovered
31 August 2026	Sunrise Bore Gold Project – Broad mineralised system confirmed (amended)
6 October 2026	Phase 4 drilling commences at the Mt McKenna Gold Project
21 October 2026	PGM broadens strategy with large-scale NT Tin Opportunity

The Company confirms that it is not aware of any new information or data that materially affects the information included in the market announcements referred to above and further confirms that all material assumptions underpinning the exploration results contained in those market releases continue to apply and have not materially changed.

8.7	**Estimated quarters of funding available (item 8.6 divided by item 8.3)**	**10.31**

Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Answer: N/A.

8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?

Answer: N/A.

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer: N/A.

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed and has been authorised for release by the Board.

Date: 27 October 2026

Authorised by: The Board

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
