30 September 2026 Quarterly Activities Report

HIGHLIGHTS

- **Globally Significant Rutile – Graphite Resource declared at Mkanda**

  298Mt @ 0.87% rutile and 1.19% TGC (0.7% cut-off)
  *Including a **high-grade rutile component***
  159Mt @ 0.98% rutile and 1.11% TGC (0.8% cut-off)

- **Top 6 globally contained rutile deposit** (Schedule 2) **laterally extensive mineralisation from surface hosted in soft free dig weathered material**
  Cautionary statement: Note global ranking is calculated within the peer entities listed in Schedule 2, the Company notes that its peer entities project MREs also contain higher confidence Indicated and Measured resource estimates.
- **Mkanda remains open for resource growth, with over 7,600m of deeper aircore drilling now completed**, of an average depth of 22m confirms significant potential to grow the resource past the ~8m of the Inferred MRE.
- **Mkanda maiden aircore drill program completed at Mlongo prospect, delivers exceptional results below the base of the current shallow Inferred Mineral Resource Estimate (MRE), including;**
  - **24m @ 1.5% rutile** (MAC26_047) from 0 – 24m EOH
  - **25m @ 1.17% rutile** (MAC26_019) from 0 – 25m EOH
  - **21m @ 1.07% rutile** (MAC26_036) from 0 – 21m EOH
  - **7m @ 2.27% rutile** (MAC26_016) from 26m to 33m EOH
  - **30m @ 0.62% rutile** (MAC26_046) from 0 – 30m EOH
  - **16m @ 0.72% rutile** (MAC26_035) from 0 – 16m

- **3.43% rutile – the highest grade rutile for the project recorded to date from 30-32m depth within a broader zone of 7m @ 2.27% rutile (MAC26_016)**
- **Key workstreams progressing** - rutile and graphite test work, marketing/offtake and resource drilling

Fortuna CEO, Mr Tom Langley, commented "We have had an exceptionally busy year and this quarter has been no different, as we continued to deliver key workstreams to progress the Mkanda critical mineral project towards development. The maiden Inferred Mineral Resource estimate of 2.6 million tonnes of contained rutile looks set to only get bigger when we announce an updated Indicated resource mid next year.

Our first batch of aircore results from the Mlongo prospect, one of several prospects we have just completed aircore drilling, confirmed rutile mineralisaiton continues at depth with some our best results of 25m @ 1.5% rutile and multiple other 20m plus intersections at Mlongo. With more assays expected in the coming weeks and months from several prospects, I expect the quality and scale of the deposit to continue to grow. The resource potential is an exciting prospect when you consider the maiden inferred resource to 8m depth already placed Mkanda in the top 6 in the world for contained rutile[3].

Of special interest is the highest rutile grades of 3.43% were recorded at 30-32m within a larger high grade interval of 7m @ 2.27% rutile from 26m to 33m and remained in mineralisation at the end of hole. This demonstrates significant potential to find high grade at depth below the current 8m limit of the ~300Mt inferred MRE.

I look forward to updating the market with a steady stream of assays of this year's aircore and hand auger drilling."

Fortuna Metals Limited (ASX: FUN) (**Fortuna** or the **Company**) is pleased to provide its quarterly report for the three-month period ending 30 September 2026.

Globally Significant Rutile – Graphite Resource at Mkanda

On 15 July 2026 the Company announced a maiden Mineral Resource Estimate (**MRE**) at the Mkanda rutile and graphite Project (**Project**) in Malawi, Africa. The MRE has confirmed Mkanda as a globally significant rutile-graphite resource Table 1. Co-products

For personal use only

of zircon and monazite are being investigated with further met testowrk planned in Q4 2026.

Malawi has emerged as one of the world's most important jurisdictions for natural rutile and coarse flake graphite discoveries, demonstrating the potential for very large-scale, near-surface rutile-graphite systems hosted in weathered basement-derived material.

Drilling programs in 2026 are focused on discovery and resource conversion to support feasibility studies in Q4 2026 and 2027. The Company continues to advance multiple work streams including rutile and graphite flotation test work, rare earth analysis, pre-feasibility studies preparations and marketing/offtake discussions with downstream buyers and trading houses.

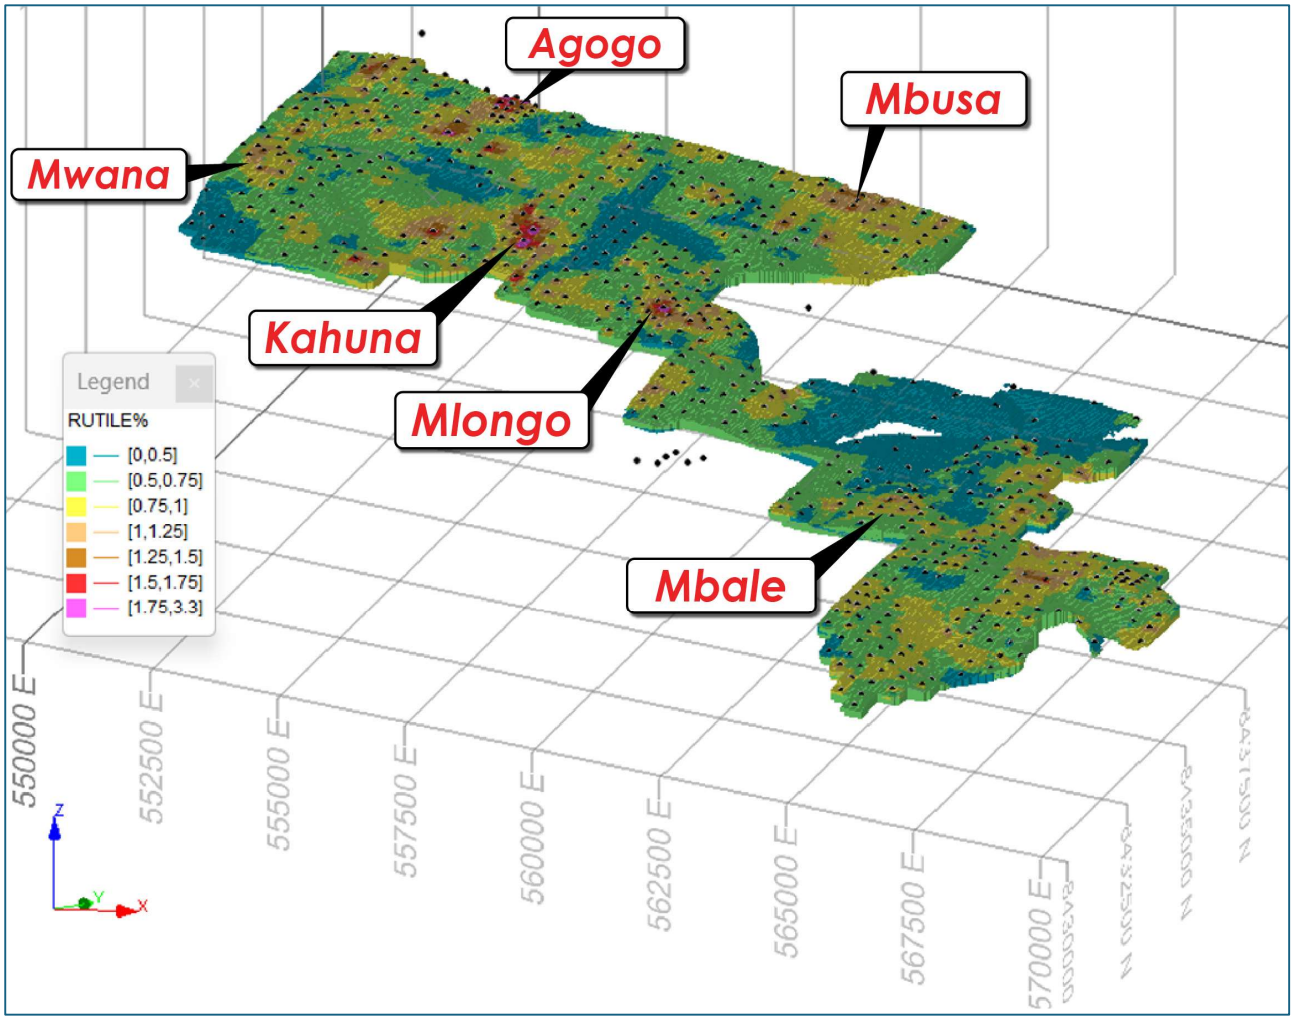

Figure 1. Modelled rutile grade oblique with NW view at the Mkanda Project in Malawi, Africa.

For personal use only

For personal use only

The maiden MRE represents a significant technical milestone for the Company and confirms the presence of a large, shallow, laterally extensive rutile-graphite mineralised system at Mkanda.

The MRE is based on first-pass hand auger drilling completed on a broad nominal 400m by 400m drill spacing, with holes drilled to an average depth of 8.4m. The hand auger program was designed to test the near-surface weathered profile and provide sufficient geological and assay data to support a maiden Inferred Mineral Resource classification. A total of 228 drillhole was sent for full hole analysis, with the remainder of the assays relating to the shallow 0-2m samples. Further assays are pending for the remainder of the drillholes where only the 0-2m sample has been assayed.

Importantly, the maiden MRE has been defined from shallow drilling only. Mineralisation remains open laterally and at depth in several areas, with the current resource limited by the depth capacity of hand auger drilling rather than by a demonstrated geological limit of mineralisation.

The Company considers the maiden MRE to be an important first step in defining the scale potential of the Mkanda Project, with further resource growth targeted through deeper aircore drilling, infill drilling and extension drilling.

The 648 hand auger holes completed in 2026 on a 200m by 200m grid and a 7,618m aircore drill program on a 200m by 200m grid in the high grade areas is now complete, with the results expected on an ongoing basis over the next 4-6 months. This years hand auger and aircore drilling have the potential to substantially add to the overall resource base and increase resource confidence for JORC estimation to Indicated category.

The Mkanda project has demonstrated the potential for rutile and graphite mineralisation to extend over large areas across the project with further analysis efforts to be directed at potential rare earth mineralisation as a priority.

Environmental and Social Considerations

The Mkanda Project is at an early stage of technical evaluation. Future work programs will include baseline environmental and social impact assessment studies (ESIA), community engagement, land access planning, farm studies and rehabilitation assessment.

The near-surface nature of mineralisation, the soft weathered host material and the potential for physical mineral separation may provide environmental advantages relative to hard-rock mining and chemically intensive processing routes, subject to future study.

For personal use only

Next Technical Work Programs

Following completion of the maiden MRE, Fortuna plans to advance Mkanda through a staged technical work program.

Planned work includes:

1. **Infill drilling** to reduce drill spacing and improve geological confidence (completed across majority of the prospects);
2. **Deeper drilling** to test the full depth extent of the weathered mineralised profile below the current average hand auger depth of 8.4m (348 drill holes completed across some of the prospects);
3. **Extension drilling** to test lateral continuity and expand the resource footprint (completed for 2026, planning for 2027);
4. **Metallurgical test work** to optimise rutile recovery, graphite recovery, rare earths recovery, zircon recovery and product quality (to commence Q4 2026);
5. **Mineralogy** to better define rutile liberation, graphite characteristics, zircon and monazite potential and quality and other heavy mineral components (H2 2026);
6. **Bulk density test work** to improve tonnage confidence and quantify mining bench variability (to commence Q4 2026);
7. **Environmental and social baseline work** to support future permitting and development studies (in progress);
8. **Scoping-level mining and processing studies** to assess project scale, operating assumptions and preliminary economics (H2 2026); and
9. **Customer and strategic partner engagement** focused on natural rutile, graphite and potential by-products (H2 2026).

The Company considers these work programs to be important steps toward expanding the resource base, improving resource confidence and assessing the development potential of Mkanda.

Maiden Inferred Mineral Resource Estimate

The Mkanda MRE has been prepared by independent consultant, Placer Consulting Pty Ltd (**Placer**). Variography analysis and peer review were conducted by Datamine Australia, resource geologists. The following information is provided in accordance with

ASX Listing Rule 5.8 and the JORC Code 2012.

The Mkanda maiden MRE meets an Inferred classification with some areas remaining unclassified and un-reported due to the paucity of informing drill data. Confidence in the MRE reflects the broad-spaced drilling, the early-stage status of the geological and topographic dataset and the requirement for further drilling to increase confidence in geological and grade continuity.

The MRE has been reported using various rutile % cut-off grades stated in the Table 1 below.

Table 1. Mkanda Maiden MRE. All mineralisation is classified as Inferred.

Cut-off Rutile %	Resource (Mt)	Rutile %	Contained Rutile (Mt)	Total Graphitic Content (TGC) %	Contained TGC (Mt)
0.4	697	0.70	4.85	1.04	7.27
0.5	602	0.73	4.43	1.09	6.59
0.6	457	0.79	3.62	1.15	5.27
0.7	298	0.87	2.59	1.19	3.55
0.8	**159**	**0.98**	**1.56**	**1.11**	**1.78**
0.9	87	1.09	0.94	1.04	0.91
1	51	1.19	0.60	1.04	0.52

Notes:

1. Tonnages and grades are rounded to reflect the appropriate level of confidence. Rounding may result in minor apparent discrepancies.
2. The estimate is based on hand auger drilling to an average depth of 8.4m on a nominal 400m by 400m drill spacing.
3. No Ore Reserves have been estimated.
4. Inferred Mineral Resources have a lower level of geological confidence than Indicated or Measured Mineral Resources and there is no certainty that further exploration will result in conversion to a higher confidence category.

Outstanding Deeper Rutile Results at Mkanda

Subsequent to the quarter on 8 October 2026 announced that the Mkanda maiden aircore drill program at Mlongo prospect delivers exceptional results below the base of

For personal use only

the current Inferred Mineral Resource Estimate (MRE), including;

- **24m @ 1.5% rutile** (MAC26_047) from 0 – 24m EOH
- **25m @ 1.17% rutile** (MAC26_019) from 0 – 25m EOH
- **21m @ 1.07% rutile** (MAC26_036) from 0 – 21m EOH
- **7m @ 2.27% rutile** (MAC26_016) from 26m to 33m EOH
- **30m @ 0.62% rutile** (MAC26_046) from 0 – 30m EOH
- **16m @ 0.72% rutile** (MAC26_035) from 0 – 16m

Project Background

The Mkanda and Kampini Projects extend over an area of 658km^2 located in Malawi, ~20km south of Sovereign Metals Limited's (ASX: SVM) world class Kasiya rutile project. Kasiya is the largest rutile and the second largest flake graphite deposit in the world1 and has recently identified monazite mineralisation hosting strategic heavy rare earths[2].

The 2026 drilling programs are designed to delineate large areas of rutile, graphite and rare earth mineralisation across the Mkanda project. The first major hand auger infill drill program of 2026 has been completed for a total of 648 drill holes to an average depth of 8.2m for a total of 5,313m. A total of 1,323 hand auger drillholes has now been completed for a total of 10,713m across the Mkanda project to an average depth of 8m.

The drilling in 2025 was designed as first-pass reconnaissance to investigate large areas

For personal use only

For personal use only

of high-grade rutile and graphite mineralisation on a 400m by 400m spacing and informed our maiden inferred Mineral Resource Estimate (MRE) announced on 15 July 2026.

The drilling programs in 2026 focused on further building resource potential and increasing resource category by drilling on a 200m by 200m spacing. A 7,618m aircore drill program is now complete, with the results expected on an ongoing basis over the next 4-6 months.

The Mkanda project has demonstrated the potential for rutile and graphite mineralisation to extend over large areas across the project with further analysis efforts to be directed at potential rare earth mineralisation as a priority.

Reconnaissance first-pass drilling at Kampini has commenced for a total of 66 drill holes. The objective of the phase 1 hand auger is to traverse the entire tenement from west to east to identify areas of high grade rutile and to follow up on historical drillholes which recorded high titanium values. Importantly, Kampini has ~50km of strike of the prospective rutile bearing graphite-biotite-muscovite schist (Slli-4a) that hosts the Mkanda and Kasiya deposits, with very limited historical drilling completed to test for widespread rutile mineralisation.

Fortuna's projects Mkanda and Kampini, together cover 70km strike of the rutile bearing graphite-biotite-muscovite schist (Slli-4a) that hosts the rutile and graphite at Kasiya. The high-grade rutile deposit at Kasiya is best described as a residual placer or eluvial heavy mineral deposit. The enrichment of rutile into economic mineralisation is a result of weathering of the primary host rock and concentration, in-place of heavy minerals, as opposed to the high energy transport and concentration of heavy minerals in a traditional placer. The enrichment stage came as tropical weathering during the Tertiary depleted the top ~5 to 10m of physically and chemically mobile minerals. This caused significant volume loss and concurrent concentration of heavy minerals including rutile.

The Mkanda hand auger results show similarities to the nearby world-class Kasiya rutile deposit. That is, a geometry of high-grade, core zones of mineralisation to end of hole of up to 10m in hand auger drilling, flanked by zones of surface only mineralisation, generally of 2 to 4m thickness. The Mkanda project is located in the same geological setting and the results received to date continue to confirm the similarity across broader areas of the Mkanda project as seen at Kasiya, just 20km to the north.

The projects have excellent infrastructure availability, with the central region being

For personal use only

approximately 30km from the capital city of Lilongwe, 25km from rail access (11km at the most northern boundary) to the Nacala rail corridor connecting to the Nacala deep water port in Mozambique, 15km from high-capacity power lines and with plentiful fresh water for potential future processing options.

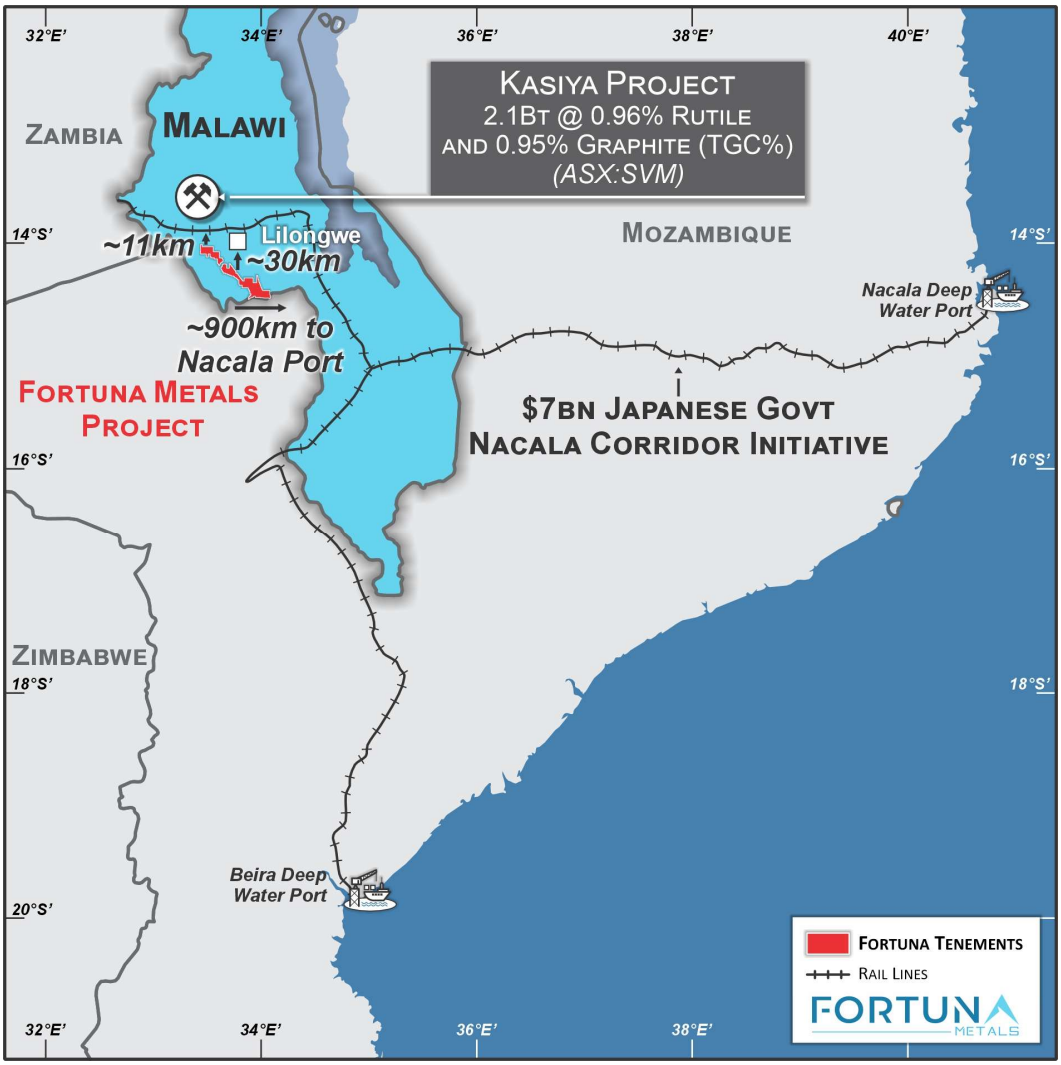

Figure 6. Locations of the Mkanda and Kampani Projects in Malawi, Africa.

Rare earths and graphite analysis is being undertaken in parallel as part of the multi-commodity focus given the recent strategic heavy rare earths recovered at Kasiya1 and the coarse flake graphite known to occur in the region. Kasiya hosts the world's second largest coarse flake graphite deposit1 and is a potentially attractive value add for the overall project economics. Sovereign's Kasiya Ore Reserve is uplifted from 0.96% rutile to 1.51% rutile equivalent (RutEq) once graphite credits are included[2].

For personal use only

The Company has commissioned its own in-country laboratory for the initial steps of preparing the sample for heavy mineral separation (HMS). This will reduce total assay cost and accelerate assay turnaround time to support quicker decision making and drilling guidance in 2026 and beyond.

Natural Rutile – Critical Mineral

Natural rutile is a highly sought-after, high-grade titanium feed stock for titanium pigment production, titanium metal, welding electrodes and advanced manufacturing. Rutile is currently selling for approximately US$1,100-1,300 per tonne.

Titanium is transforming the field of next-generation robotics through its rare combination of lightweight strength and high durability. As robotics and humanoids become more advanced, demand for materials like titanium is growing significantly. Titanium meets the dual requirements of lightweight construction and robust performance, making it an essential component in advanced robotic systems.

Titanium alloys allow complex, lightweight construction techniques that reduce energy consumption while maintaining operational effectiveness. Advances in robotics driven by these materials also contribute significantly to industrial automation, including precision tasks like medical equipment handling and high-tech manufacturing.[3]

Traditional Rutile deposits are becoming exhausted with legacy producers in decline, with an anticipated tight supply.

The United States currently imports 100% of its titanium sponge with zero domestic production and record imports of 44,000 tonnes in 2025. Japan supplies over 70% of the US's titanium sponge imports and Japanese producers depend on securing reliable natural rutile feedstock. Western-qualified titanium sponge production has declined 9% to approximately 81,000 tonnes, while China's share of global production has risen to 70%.

Corporate

Notification of Milestone Vesting

On 28 July 2026 the Company advised that 30,000,000 Class B Performance Shares had vested and were converted into shares as per the terms approved by shareholders at the Annual General Meeting on 30 October 2025.

For personal use only

Shareholder Meetings

During the quarter all resolutions put to shareholders at a General Meeting held on 13 July 2026 were carried on a poll.

Shareholders are invited to attend the Annual General Meeting of the Company which will be held at 11am (WST) on Thursday, 29 October 0226 at 104 Colin Street, West Perth WA 6005.

Your proxy voting instructions must be received by no later than 11:00am (WST) on 27 October 2026, being not less than 48 hours before commencement of the Meeting. Any proxy instructions received after that time will not be valid for the Meeting.

ASX Additional Information

- ASX Listing Rule 5.3.1: Exploration and Evaluation Expenditure during the quarter was $2,034,000. Full details of exploration activity during the quarter are set out in this report.
- ASX Listing Rule 5.3.2: There was no substantive mining production and development activities during the quarter.
- ASX Listing Rule 5.3.5: Payment to related parties of the Company and their associates during the quarter: $130,265. The Company advises that this relates to non-executive directors' remuneration and additional technical consulting fees. Please see the Remuneration Report in the Annual Report for further details on Directors' Remuneration.

CAUTIONARY STATEMENT

This announcement has been prepared by Fortuna Metals Limited. The document contains background Information about Fortuna Metals Limited current at the date of this announcement. The announcement is in summary form and does not purport to be all inclusive or complete. Recipients should conduct their own investigations and

For personal use only

perform their own analysis in order to satisfy themselves as to the accuracy and completeness of the information, statements and opinions contained in this announcement. The announcement is for information purposes only. Neither this announcement nor the information contained in it constitutes an offer, invitation, solicitation or recommendation in relation to the purchase or sale of shares in any jurisdiction.

The announcement may not be distributed in any jurisdiction except in accordance with the legal requirements applicable in such jurisdiction. Recipients should inform themselves of the restrictions that apply to their own jurisdiction as a failure to do so may result in a violation of securities laws in such jurisdiction. This announcement does not constitute investment advice and has been prepared without taking into account the recipient's investment objectives, financial circumstances or particular needs and the opinions and recommendations in this announcement are not intended to represent recommendations of particular investments to particular persons.

COMPETENT PERSON STATEMENTS

The information in this document that relates to Exploration Results is based on information compiled by Mr Thomas Langley who is a member of the Australian Institute of Geoscientists (MAIG) and a member of the Australasian Institute of Mining and Metallurgy (MAusIMM). Mr Thomas Langley is a full-time employee of Fortuna Metals Limited, and is a shareholder, however Mr Thomas Langley believes this shareholding does not create a conflict of interest, and Mr Langley has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Langley consents to the inclusion in this presentation of the matters based on his information in the form and context in which it appears.

The Company confirms that it is not aware of any new information or data that materially affects the exploration results in the original reports, and that the form and context in which the Competent Person's findings are presented have not been materially modified from the original reports.

The Company confirms that it is not aware of any new information or data that materially affects the Mineral Resources in this publication and previously released to ASX on 15 July 2026. The Company confirms that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially

For personal use only

changed. The Company confirms that the form and context in which the BNA Mining Solutions findings are presented have not been materially modified.

The information in this document that relates to Exploration Targets at the Mkanda Project, is based on information compiled by Mr Richard Stockwell, a Competent Person who is a Fellow of The Australian Institute of Geoscientists. Mr. Stockwell is a full-time employee of Placer Consulting Ltd and a consultant to Fortuna Metals Limited. Richard has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Stockwell consents to the inclusion in this presentation of the matters based on his information in the form and context in which it appears.

The information in this announcement that relates to historical exploration results at the Mkanda Project in Malawi, were first reported by the Company in accordance with listing rule 5.7 on the dates identified throughout this ASX release. The Company confirms that it is not aware of any new information or data that materially affects the exploration results in the original announcements, and that the form and context in which the Competent Person's findings are presented have not been materially modified from the original reports.

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
