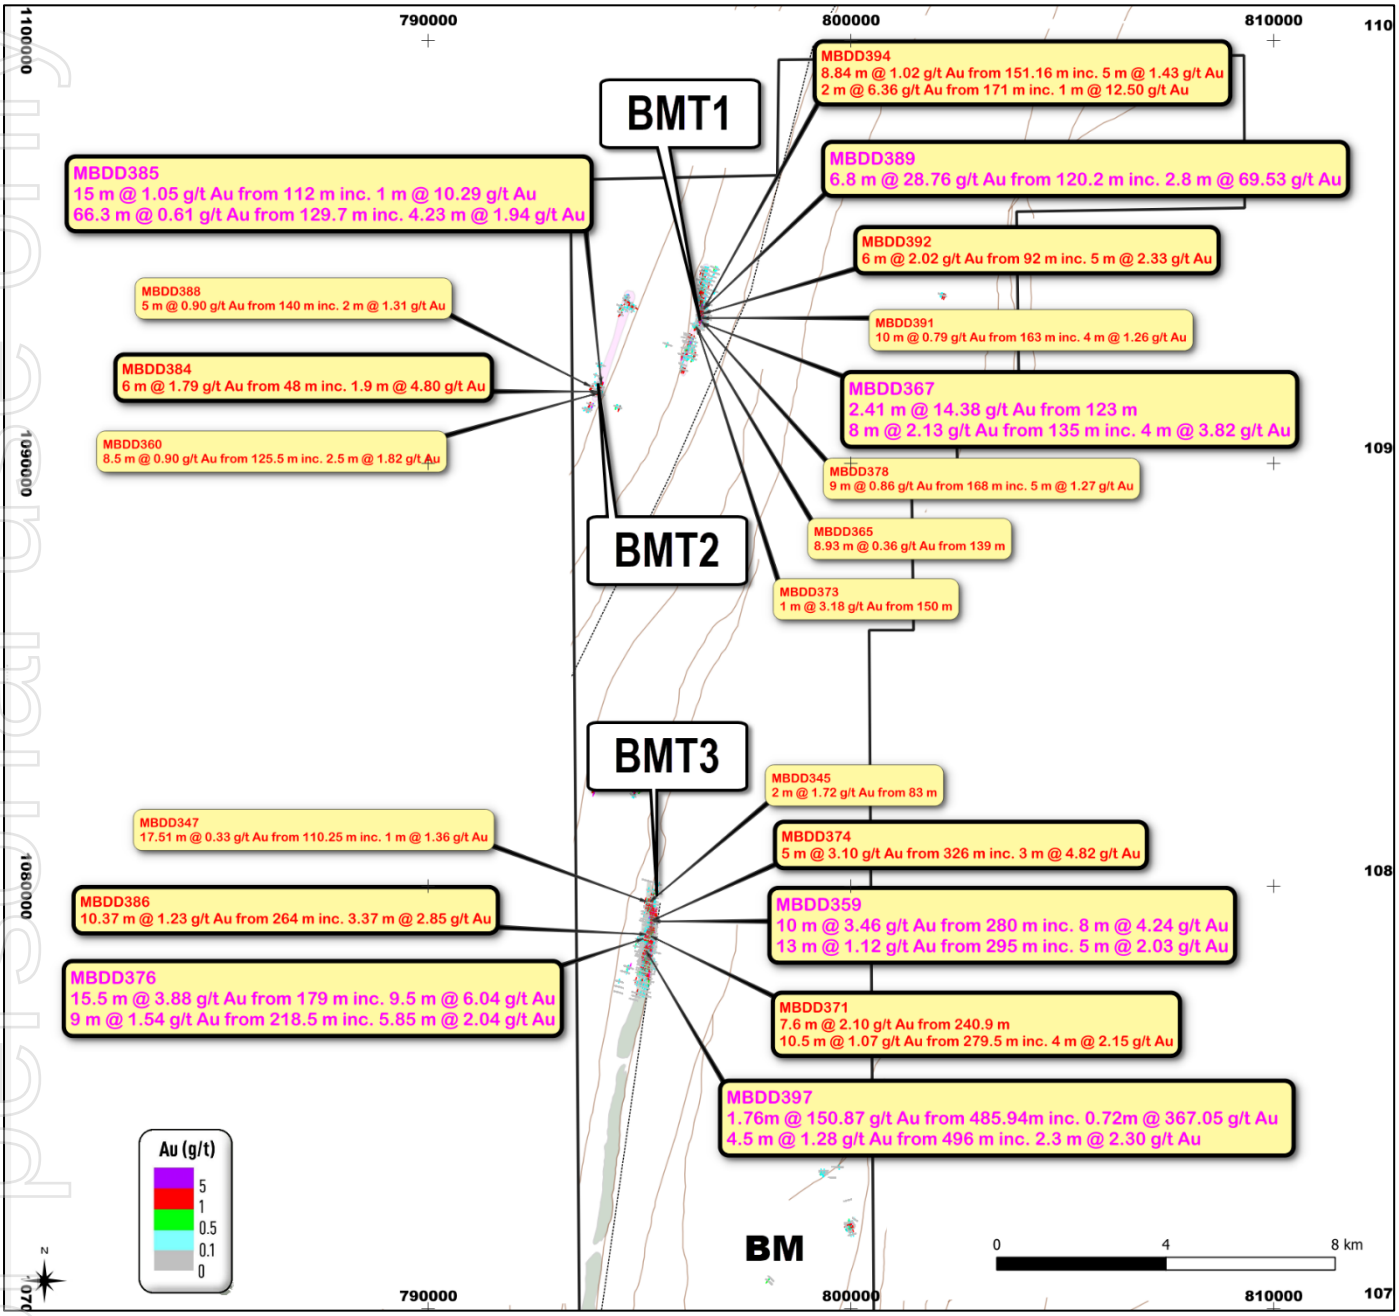

Figure 7: Plan view showing new drill results (yellow) for BM[5]

Gold mineralisation at BMT1 and BMT2 is hosted within sandstone rich in quartz veining associated with pyrite. Gold mineralisation at BMT3 is hosted in a diorite emplaced between volcanic and sedimentary rocks and is characterised by disseminated pyrite with quartz veinlets and quartz veins, occasional visible gold and associated with silica, carbonate and chlorite alteration. True widths for these shallow gold intercepts are estimated at about 60% - 85% of reported downhole lengths.

Gold mineralisation at BM remains open along strike and at depth. Aurum's current follow-up drilling is to test the gold mineralisation identified outside the latest resource.

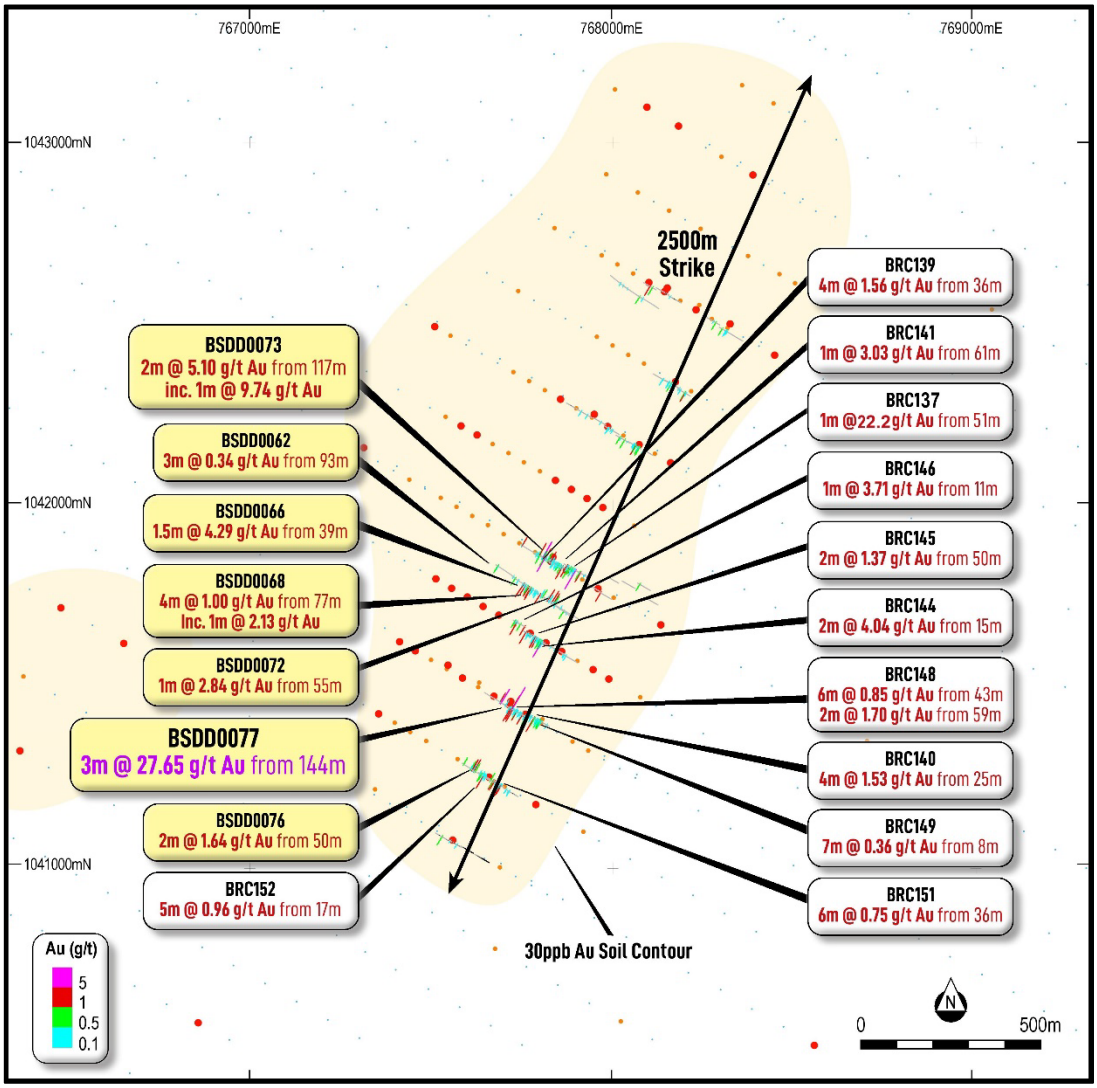

Figure 11: Plan view showing new drill results (yellow) for the BST2[9]

The BST1 gold deposit, located 19km south of BDT1 on the Nyangboue shear zone, is hosted in a sedimentary package comprising alternating sandstones and shales with minor intraformational conglomerates. Broad zones of lower grade disseminated mineralisation envelope higher grade zones which are in some instances associated with quartz veining with visible gold. Gold mineralisation encountered occurs as discrete higher-grade zones within a broad low-grade envelope within a folded sedimentary package. Extensive sulphide and carbonate alteration occurs with higher grade zones being associated with structurally controlled zones of quartz veining. Oxidation extends to approximately 50m vertical depth and being a sedimentary protolith is soft and friable.

The BST2 gold prospect is located approximately 18km northwest of BST1. The prospect was identified by permit-wide reconnaissance soil sampling in 2015–16 and defined by 200m x 50m infill sampling in early 2017

as a coherent ~2km long +50ppb Au gold-in-soil anomaly, including more than 600m of strike above 100ppb Au and a peak value of 706ppb Au.

Gold mineralisation at BST1 and BST2 remains open along strike and at depth. Aurum's follow-up drilling is to test the gold mineralisation identified outside the current resource.

To date, Aurum's drilling at Boundiali has only targeted the most obvious outcropping anomalies. Aurum believes there remains a high potential for blind discoveries, providing a clear pathway for continued resource growth in CY2026 and beyond.

Next Steps

Aurum will continue to use its strong balance sheet and self-owned drill rig fleet to drive multi-rig drilling activity throughout CY2026 focussed on rapid resource conversion, resource growth and economic de-risking.

1. **Boundiali: Moving to Development**
   - **Drilling (150,000m):** 16 diamond rigs to test strike and depth extensions across BD, BM, and BST tenements.
   -).
   - **DFS Delivery:** Results from 2026 drilling will be incorporated in a DFS expected in late 2026.
2. **Napié: Scaling the Resource**
   - **Resource Expansion:** A 30,000m diamond drilling program planned to grow the 1.16Moz gold resource will commence in Q4 CY2026.
   - **Drilling Efficiency:** Aurum is building an exploration camp close to the Napié gold deposits to reduce operating costs and improve access efficiency.
3. **Regional Exploration & Discovery**
   - **Pipeline Generation:** Scout drilling is planned for the BD, BM, and BST tenements to test new targets identified via soil anomalies and geological mapping across the 75km of N-S mineralised corridor.
   - **Early-Stage Growth:** Aurum is advancing its Encore JV[10] and Major Star Plus[11] partnership projects to identify new gold systems in the region.
   - **The grant of Boundiali South West (BSW) exploration licence in July 2026 to Aurum's JV partner Major Star Plus provides expanded exploration footprint for investigation into the strike extension of BST2 which reveals promising initial drilling results.**

1. *The Mineral Resources have been compiled under the supervision of Mr. Jeremy Clark who is an associate of Lily Valley International (LVI) and a Registered Member of the Australian Institute of Mining and Metallurgy. Mr. Clark has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity that he has undertaken to qualify as a Competent Person as defined in the JORC Code.*
2. *All Mineral Resources figures reported in the table above represent estimates based on drilling complete as at 6 February 2026. Mineral Resource estimates are not precise calculations, being dependent on the interpretation of limited information on the location, shape and continuity of the occurrence and on the available sampling results. The totals contained in the above table have been rounded to reflect the relative uncertainty of the estimate. Rounding may cause some computational discrepancies.*
3. *Mineral Resources are reported in accordance with the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (The Joint Ore Reserves Committee Code – JORC 2012 Edition*
4. *The Mineral Resources have been reported on a dry basis at a 100% equity stake and not factored for ownership proportions.*
