TECHNOLOGY SERVICES - PRINCIPLES

CLOUD FIRST

Where appropriate a preference for Software as a Service (SaaS) before Platform (PaaS) before Infrastructure as a Service (IaaS) will be applied.

COST VARIABILISATION

Where it is beneficial to SCA, we will use dynamic pricing options. Create a more predictable spending profile.

DATA DRIVEN DECISION MAKING

Use of data to inform decisions of business practice and technology investment with a view of improving the accuracy, execution and benefits of decisions.

SECURITY AT OUR CORE

Continue to focus on security at the core of all decisions made, both in terms of awareness and technology.

VENDORS TO PARTNERS

Develop deep relationships with vendors and suppliers, identifying those that have the potential to become strategic partners.

BUY BEFORE BUILD

Re-use and integrate existing applications and solutions before investing in new solutions. When investing, purchase Commercial off the Shelf (CotS) before developing new solutions.

IT AND BROADCAST CONVERGENCE

Across the industry traditional engineering / broadcasting technologies are converging with traditional IT technologies with a transition to IP based technologies.

Our strategy is to deliver a “**converged technology domain**” that will deliver benefits, including:

- **Reduced Costs**
- **Increased Governance and Controls**
- **Reduced Complexity**
- **Increased Reliability**
- **Increased Extensibility**

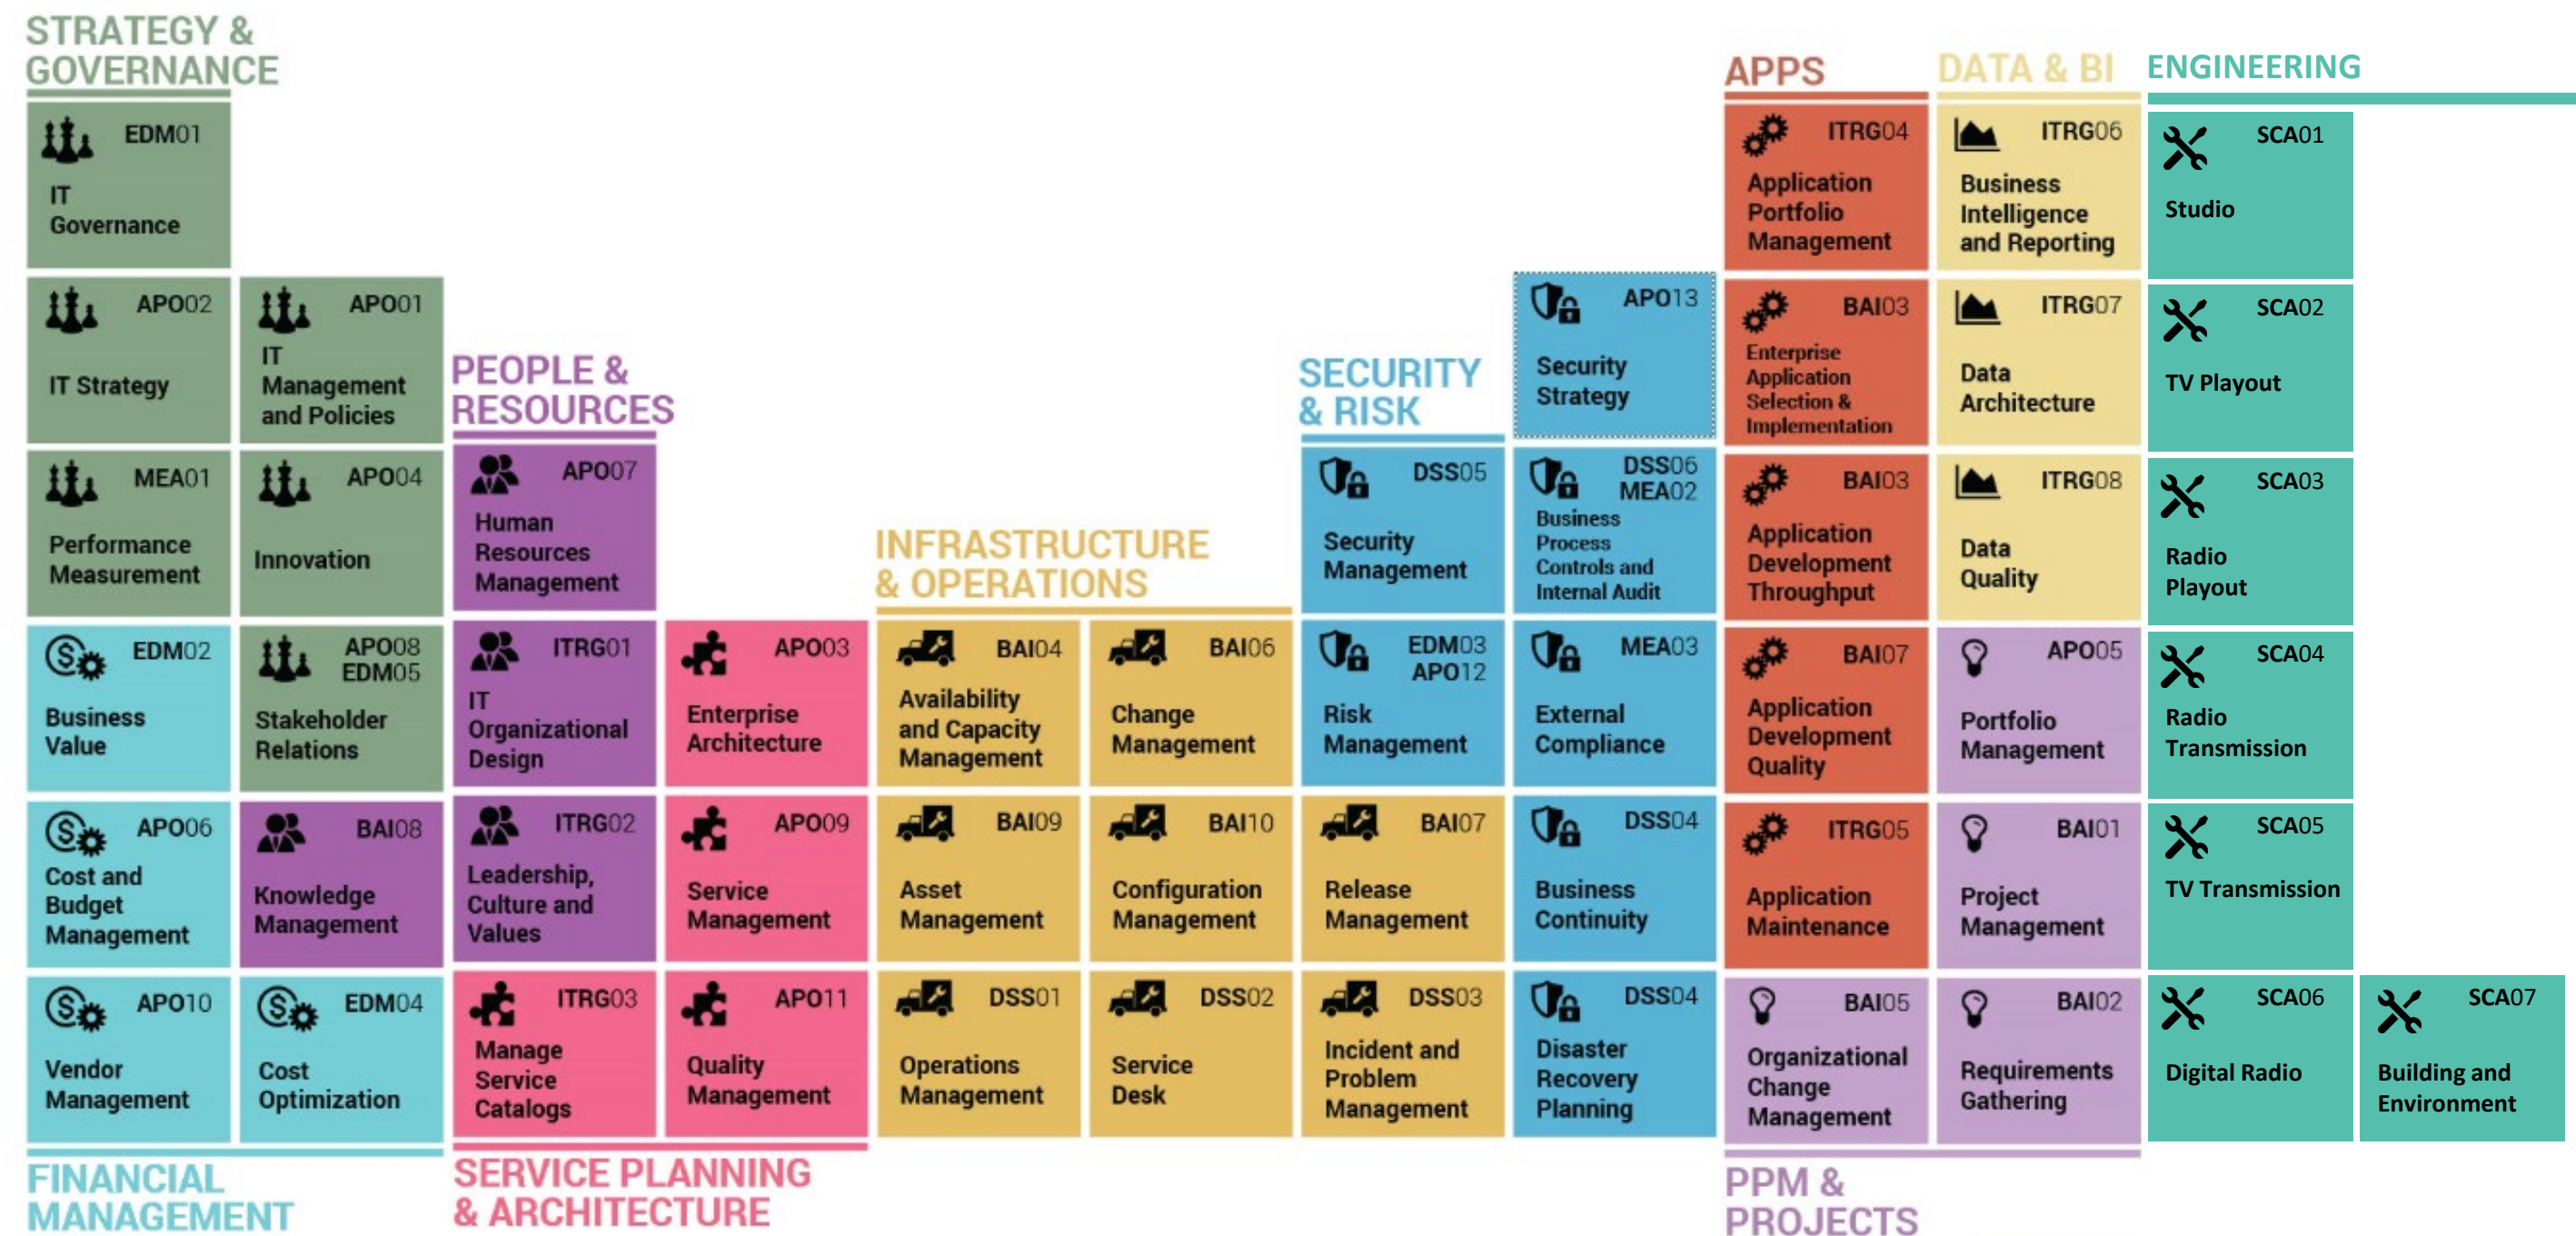

Key areas of focus are in the domains of infrastructure, networking, service delivery management and security.

WORKING TOWARDS A CONVERGED IT AND BROADCAST TECHNOLOGY SERVICES TEAM

1. **Extending Technology Services established governance and controls** - particularly in the areas of software and asset management and security and risk management
2. **Extending Technology Services 'Service Management' capability** - delivering visibility of incidents and changes, identifying causes of operational interruptions with a view to implement continuous improvement and proactive problem management
3. **Developing a unified technology reference model** – delivering a consolidated view of SCA's technology capability enabling:
 - Identification of duplicated technologies
 - Rationalisation of technology and vendor landscape
 - Creation of shared technology resource pool
 - Delivery of unified strategic technology roadmap
